\$641 Buys the Material to Build this Home!

NO MONEY IN ADVANCE!

When you "Build-To-Stay—The Harris Way," you secure the *utmost possible* in Quality, Economy and Service. Why? Simply because you profit directly—*immediately*—by our 24 years' experience. You get the benefit of our practical knowledge as the *originators* of the "Direct-to-You" Home Building Industry. We were the *first* to sell Lumber and Material direct to Home Builders at one small profit. We were the *first* to reduce this vitally important industry to a *perfect system* and extend the benefits uniformly to the people of the nation. *The splendid Harris Home above has 5 rooms, bath, pantry and reception hall in an excellent arrangement. The size is 22 ft. x 26 ft.*

**\$10,000 BOOK
OF PLANS
FREE**

"THE HARRIS WAY"

has exclusive merits—special advantages for the shrewd and careful Home Builder—possessed by no other plan or method. It is the best, safest and most sensible way to build your ideal home *right* without sacrifice of quality—or the waste of a single penny! Thousands have built "The HARRIS WAY" with profit and satisfaction.

SEND LUMBER BILLS

Our ten million dollar buying power gives Harris customers an overwhelming price advantage. We can—and do—undersell all others. The *proof?* Easy! Just send us your lumber bills—for any kind of building you may be planning and get our prices. Compare them item for item, and let the *test* be the *proof*. Write us today!

BUY YOUR HOME SENSIBLY CUT-TO-FIT—SHIPPED ALL COMPLETE IN ONE CAR

The material used in building all Harris Homes is prepared by us, complete for your use in a way that is instantly—and easily understood. It is sensibly cut-to-fit with *absolute accuracy* and *positive elimination of all waste*. You pay for nothing you do not get—you pay our *bed rock low, one-small-profit bargain price only* for what is needed to do the work *right*—"The HARRIS WAY."

Our mammoth material stations, in the heart of the finest lumber tracts are always filled to overflowing with brand new, quality material. These stations are centrally located for quick and economical deliveries, "DIRECT-TO-YOU," no matter where you live, at the *lowest possible freight charge*.

**Harris Bros. Co.
Dept. FH-7, CHICAGO**

Please send me free—without the slightest obligation—the Harris Home Book of Plans, and show me how to save big money in building my home.

The Victor Company
announces
a complete course
in vocal training
by **Oscar Saenger**
in twenty lessons
on ten Victor Records
\$ 25

Soprano; Mezzo-Soprano; Tenor; Baritone; or Bass

Every student of vocal music, every aspiring young singer, every one who has a voice, even though it be untrained, can now develop his or her talents under the direction of Oscar Saenger—America's greatest and most successful vocal teacher.

No matter where they may live, all those who wish to sing may now learn to do so under the direction of a master who is credited with having entered more pupils upon successful operatic, oratorio or concert careers than has any other teacher in the United States.

The Oscar Saenger Course in Vocal Training consists of ten double-faced Victor Records, which provide twenty lessons in vocalization.

There is a separate set of records for each of the following five voices: Soprano, Mezzo-Soprano, Tenor, Baritone, and Bass.

For each set of lessons, perfect examples of tone production have been secured through Oscar Saenger's personal choice of the artists best qualified to serve as exemplars.

The Oscar Saenger Course in Vocal Training for any of the voices mentioned above, may be procured from any Victor dealer at \$25—the cost of a *one-hour* lesson at the Saenger Studio in New York.

Write for an illustrated booklet

giving full information about the series of Victor Records of the Oscar Saenger Course in vocalization. We will gladly send a copy upon receipt of your request.

Important Notice: All Victor Talking Machines are patented and are only licensed, and with right of use with Victor Records only. All Victor Records are patented and are only licensed, and with right of use on Victor Talking Machines only. Victor Records and Victor Machines are scientifically coordinated and synchronized by our special processes of manufacture; and their use, except with each other, is not only unauthorized, but damaging and unsatisfactory.

Victrola

"Victrola" is the Registered Trade-mark of the Victor Talking Machine Company designating the products of this Company only.

Warning: The use of the word *Victrola* upon or in the promotion or sale of any other Talking Machine or Phonograph products is misleading and illegal.

IMPORTANT NOTICE to LUMBER USERS:

THE SOUTHERN CYPRESS MANUFACTURERS ASSOCIATION HEREBY INFORMS YOU THAT ALL CYPRESS NOW AND HEREAFTER SHIPPED BY MILLS WHICH ARE MEMBERS OF THE ASSOCIATION WILL BE

**IDENTIFIED
BY THIS MARK**

TRADE MARK REG. U.S. PAT. OFFICE

This registered trade-mark will be, henceforth,
YOUR INSURANCE POLICY OF QUALITY.

It will appear stamped (mechanically and ineradicably) on one end, or both ends, of EVERY board and timber of

CYPRESS "THE WOOD ETERNAL."

CYPRESS FLOORING, SIDING, MOULDING AND SHINGLES, which come in bundles, will bear the same mark on EVERY BUNDLE.

The legal right to apply this epoch-making symbol of strict
RESPONSIBILITY IN LUMBER MAKING AND SELLING

is, of course, restricted to those Cypress mills which, by their membership in the Southern Cypress Manufacturers' Association, attest their devotion to its Principles of SERVICE to the CONSUMER and their foresighted appreciation of its open and progressive educational methods.

Only mills cutting "Tide-water" Cypress are eligible for membership. (Cypress which grows too far inland is not equally noted for the "Eternal," or decay-resisting, quality.)

Only mills which subscribe to the Association's standard of scrupulous care in methods of MANUFACTURE, INTEGRITY OF GRADING and ACCURACY OF COUNT can belong to the Association. These responsible "A-1" mills the Association now licenses to

CERTIFY THEIR CYPRESS by applying the registered trade-mark with their identifying number inserted.

TRADE MARK REG. U.S. PAT. OFFICE

BY THIS MARK YOU KNOW THAT IT'S CYPRESS, "THE WOOD ETERNAL," AND WORTHY OF YOUR FAITH. IT IS WELL TO INSIST ON SEEING THIS TRADE-MARK ON EVERY BOARD OFFERED AS "CYPRESS."

TRADE MARK REG. U.S. PAT. OFFICE

Let our ALL-ROUND HELPS DEPARTMENT help YOU MORE. Our entire resources are at your service with Reliable Counsel.

BERNARD-HEWITT & COMPANY

424-434 So. Green St.

Desk F24

CHICAGO, ILLINOIS

The Automobile Business is Growing

More help needed and big pay. No other business offers such opportunities. It's easy to learn. An Auto Repairman is not a machinist—his work consists of adjustments and re-fitting worn parts, "knowing the principle," that's the thing. One of our students writes: "Before I started with your course I was a clerk at \$30 per month. After finishing I followed your instructions, started a repair shop and cleared \$122 the first month—pretty good for the first month." Let us show you this and many other letters.

LEARN THE Automobile Business during your spare time

WE CAN HELP YOU IN 3 WAYS:

- 1st We can teach you quickly and thoroughly.
- 2nd After we teach you, we have a plan to assist you in getting started in the actual practical line of work and assist you in getting actual driving experience.
- 3rd While we are teaching you we show you how to make money right on the start.

THE DYKE WORKING METHOD

of teaching by mail is a new invention—a new idea—we use real 4 and 6 cylinder engine models—11x1 1/2 inches—on which you can actually see all parts moving—it is the only system of its kind in the world.

This is one of the 7 real models used. In addition to 50 simplified instructions with hundreds of illustrations, charts and models.

This is the valve side of the four cylinder model. The other side is the crank and piston side. Turn the crank and all of the real metal parts actually operate. The six cylinder engine model is similar.

This system is endorsed by Barney Oldfield, Elwood Haynes, Chas. Duryea and other motor authorities.

Mr. Dyke has been identified as a pioneer inventor, supply man, etc., with the auto industry since its beginning. He originated the first auto supply Co. and manufactured and marketed the first float type carburetor in America. No other man with such experience is today teaching others.

If we prove to you that we have started hundreds of others into the repair business and as chauffeurs—who had no previous experience and who knew no more about an auto than you do right now—you must admit we can do the same for you. Write me TODAY—NOW—and LET ME PROVE IT.

Write for DYKE'S FREE BOOKLET

It is interesting and instructive in itself. Fully illustrated. Learn how you can get all this training for only \$15. Fill out below or write a postal—but do it NOW.

Dyke's Correspondence School of Motoring
Box 188, Roe Bldg.
St. Louis, Mo.

Sent me your free 32-page booklet about your New Idea Working Model Course and testimonials and proofs. It is understood I am under no obligations in sending for this.

Learn Piano Twice Faster By *Scientific* "Short Cut"

**Wonderful Invention now saves you months of time and effort—
Leaves nothing out, but gets you there sooner—Cuts cost in half, too.**

You learn more *thoroughly*—play more artistically, more individually—thousands who have tried it say so. Old-fashioned, round-about methods *must yield* to *scientific, direct* methods. It's the Law of Life.

A Momentous Discovery

After twenty-five years of painstaking, technical research, Dr. Quinn discovered the great Law of Nature that the "vibration waves" of twelve tones in music (Key of E) **exactly coincide** with the "vibration waves" of twelve tones in color. This simple Law of Nature, like all such laws, opened out whole worlds of **PRACTICAL BENEFITS**—and led to Dr. Quinn's inventing the **COLOROTONE**.

Easy to Understand—For Beginners or Experts

The **COLOROTONE**, like all great inventions, is simplicity itself. Children master it as easily as grown people. It brings the same amazing results to experts that it does to beginners. Investigate without cost, by writing today for 64-page free book explaining all about it.

Sweeps Away Century-Old Stumbling Blocks

The important musical subject of Transposition—usually a "night-mare" to students—becomes easy and fascinating by the use of the **COLOROTONE**. The **COLOROTONE** enables you to master, from the very beginning of your study the great Liszt System, by which you play every piece in **every key with exactly the same fingering**. Formerly this great time-saver could be taught only to **advance students**. By using the scientific **COLOROTONE** you start the Liszt System in your **third lesson**—a tremendous advantage. And the **COLOROTONE** has scores of other equally important advantages. Write for free book.

Nothing Else Like It—No Special Music Necessary

There is nothing else even remotely like the **COLOROTONE**. It stands on the keyboard before you and instantaneously solves, by correct, scientific methods, all kinds of troublesome playing problems. After the first dozen lessons you discontinue using the **COLOROTONE**. Almost miraculously it has taught you; and you thereafter play without using it. No special music is necessary. You play by note from **any** music.

Surprising Results of Learning By a Scientific System

It's amazing to see how quickly you gain skill at either the piano or organ, and how expressively and feelingly you can play. Men and women who have failed by all other methods have quickly and easily attained success when using Dr. Quinn's **COLOROTONE**, and his famous **WRITTEN METHOD**. Dr. Quinn's **WRITTEN METHOD** (now including the **COLOROTONE**) is a complete **COURSE IN PIANO OR ORGAN** for home study. Each of the clearly-written lessons leads you logically, correctly, and systematically to playing skill. The **COURSE** is fully illustrated with diagrams and drawings showing every position and movement of the fingers, hands, and arms. Thus you rely not on your memory of verbal instructions, which must sometimes be incorrect, but on detailed illustrations and explanations **always before you**. Nothing is, nor can be forgotten. You practise in spare time, at your convenience, in the privacy of your own home. Progress as rapidly or slowly as you wish. All necessary music is included **Free**. Diploma of recognized value is granted.

Endorsed by Distinguished Musicians

Among our graduates are thousands of accomplished amateur players, as well as prominent professional players, successful music teachers and leading composers. The **COURSE** is endorsed by many distinguished musicians and educators in whose opinion you have the utmost confidence.

Investigate Without Cost—Special Offer

Write today, using post card, letter or free book coupon, for our new 64-page book explaining everything you want to know about how to study music and learn to play piano or organ in less than half the time usually required. The book gives full particulars of our **COURSE** and wonderful **COLOROTONE**, and is a possession **worth having**. Special reduced terms this month on account of our Twenty-Fifth Anniversary offer. Investigate without cost or obligation. **Now**.

Marcus Lucius Quinn Conservatory of Music
Social Union Bldg., Studio K. P., Boston, Mass.

This Interesting Book

contains 64 pages of vital information about how to study music and learn to play the piano or organ. It explains the great pleasures and special advantages of skill at the piano or organ and tells how you can acquire this skill at half the usual cost and effort by a method of home study which is scientific. It tells how you can become a music teacher and earn \$25 to \$100 weekly. It tells how you can become a professional player at a liberal salary—and how the world's greatest pianists, organists and composers earned their way to Fame, Honor and Wealth. It fully explains everything about Dr. Quinn's wonderful **COLOROTONE** and his famous **WRITTEN METHOD**. Send for this remarkable free book at once. No cost or obligation.

NAME.....

ADDRESS.....

Grow Younger as You Grow Older

**Younger in Body, Younger in Spirit, Younger in Ambition,
Younger in Every Characteristic that Gives Greater Earning
and Living Power, Greater Thought Power, Greater Pleasure
Obtaining Power and Greater Health Promoting Power.**

THE number of years a man has lived does not tell how old or young he is. A man is as old or as young as his energy, his vitality, his capacity for work and play, his resisting power against disease and fatigue.

A man is only as old or as young as his memory power, will power, sustained-thought power, personality power, concentration power and brain power. He is only as old or as young as his digestive power, his heart power, his lung power, his kidney power, his liver power. *Age is measured by the age of our cells, tissues and organs, and not by the calendar!*

Cultivate the Cells

Everybody knows that the body and brain are made up of millions of tiny cells. We can be no younger than those cells are young.

We can be no more efficient in any way than those cells are efficient. We can be no more energetic than the combined energy of those cells.

By conscious cultivation of these cells, it is as natural as the law of gravity that we become more efficient, more alive, more energetic, more ambitious, more enthusiastic, more youthful. By consciously developing the cells in our stomachs we must improve our digestion. By consciously developing the cells in the heart, we must increase its strength in exact proportion. By consciously developing the brain cells, the

result can only be multiplied brain power—and so with every organ in the body.

What we are and what we are capable of accomplishing depends entirely and absolutely on the degree of development of our cells. They are the sole controlling factors in us. We are only as young and as great and as powerful as *they* are.

There Is No Fraud Like Self-Deception

You may think you are young, strong, brainy, energetic, happy, yet when compared with other men or women, you are old, weak, dull, listless, and unhappy. You do not know what you are capable of accomplishing because you have not begun to develop the real vital powers within you. The truth is you are only a dwarf in health and mind when you can easily become a giant through conscious development of every cell, tissue and organ in your body and brain. By accelerating the development of the powers within you, you can actually become younger, as you grow older—yes, younger in every way that will contribute to your health, happiness and prosperity.

Conscious Evolution —the Secret

Swoboda proves that Conscious Evolution gives energy and vitality to spare, digestive power to spare, self-reliance to spare, and gives many other desirable characteristics to spare. He proves that Conscious Evolution makes people disease-proof, fatigue-proof. He maintains that to possess sufficient vitality and energy and to keep the body in normal health under the most favorable conditions is no more health prosperity than to have only enough money from day to day to meet current expenses. Great reserve health, great reserve energy is what we must acquire if we are to successfully nullify the ravages of time, and to easily overcome every adverse condition and thus enjoy the benefit of our resources, the benefit of our health power and the advantage of our energy.

The Swoboda System is as effective for Women as for Men

Beware of Health Poverty

As Swoboda says, "there are individuals who seek work only when their last cent is gone. Likewise, individuals live from minute to minute and from day to day, seeking health and energy only as they need them badly."

Conscious Evolution is for them — for everyone. It is a simple, scientific and practical system by means of which every part of the brain and body is energized, strengthened, awakened, so that we become possessed of a super health and mentality — the Swoboda kind of health and mentality. Conscious Evolution makes for good fortune by developing the resources and the ability and power of personality.

Strange as it may seem, this revolutionary method of consciously awakening and developing weakened and lifeless cells requires no drugs, medicines or apparatus of any kind. It does not require dieting, deep breathing, excessive exercising, cold baths, electricity or massage. It takes only a few minutes a day, yet so startling is the effect of Swoboda's system that you begin to feel younger, renewed, revitalized, re-energized after the very first day.

An Amazing Book for You

Swoboda has published for distribution a remarkable book which explains his system of Conscious Evolution and what it has already done. Write for this book — not because Conscious Evolution has meant so much to 200,000 other men and women, not because there is scarcely a prominent family in the country that hasn't at least one member a pupil of Swoboda, including Chas. E. Hughes, Woodrow Wilson, Rockefeller, the Vanderbilts, the Goulds, the Huntingtons, the Armours, the Cudahys, the Swifts — but write for the book because it means so much to you in multiplied living power, earning power and resisting power. It is a big book filled from cover to cover with the vital facts about yourself and how you can acquire the degree of perfection in body and mind that you so much desire. It exposes the dangers of excessive deep breathing, excessive exercise, and excessive muscular development.

Regardless of how young you may feel, of how efficient you may think you are — regardless of how active, energetic and alert you may consider yourself — regardless of how happy, how contented you may pride yourself on being — regardless of how healthy, wealthy or successful you may be, you cannot afford, in justice to yourself, to miss the interesting and instructive secrets explained for the first time in this startling new book.

A mere reading of "Conscious Evolution" will so fill you with enthusiasm and ambition that you will not rest until you have yourself acquired the Swoboda kind of health and energy by cultivating and revitalizing intensively every cell, tissue and organ in your own system. Tear out the coupon on this page, write your name and address on it or write a letter or a postal card and mail it today. Even if you gain but one suggestion out of the 60 pages you will have been repaid a thousand fold for having read it. I urge you by all means not to delay, not to say, "I'll do it later," but to send now, while the matter is on your mind. Remember, the book is absolutely free for you to keep — there is no charge or obligation now or later. Write now. Address

ALOIS P. SWOBODA 2032 Aeolian Building
NEW YORK CITY

Beware of individuals pretending to be my agents or representatives. All such are impostors and frauds. — Swoboda.

CREATOR OF CONSCIOUS EVOLUTION

Swoboda

A
Remarkable
Personality

Swoboda, himself, is perhaps the most perfect example of what Conscious Evolution can accomplish. As Swoboda gains in years, he is growing younger in enthusiasm, younger in vitality, younger in health; he is becoming stronger, more energetic, more confident, more dominant, more alive, by capitalizing his creative powers through Conscious Evolution. What Swoboda is accomplishing for himself you can accomplish — every individual can accomplish, for every individual is governed by the same laws and principles, and every individual can make use of the same laws and principles. His mind and body are so ALERT AND ACTIVE that in his presence one feels completely overpowered. His personality dominates everything with which it comes in contact; yet Swoboda is REAL — there is absolutely nothing MYSTERIOUS about him. He knows not what fatigue is — he is a TIRELESS WORKER. He delights in making sick people well and weak people strong. He loves his work because he is of benefit to humanity — making a BETTER, more VITAL, more POTENT race of men and women.

PARTIAL CONTENTS OF THE 10 GUIDES

No. 1. Contains 246 pages, 246 illustrations. Electrical signs and symbols—static and current electricity—primary cells—conductors and insulators—resistance and conductivity—magnetism—induction coils—dynamo principles—classes of dynamos, etc.

No. 2. Contains 218 pages, 256 illustrations. Armatures—windings—commutation—brushes—motor principles—armature reaction—motor starting—calculations—brake horsepower—selection and installation of dynamos and motors, etc.

No. 3. Contains 276 pages, 286 illustrations. Galvanometers—standard cells—current measurement—resistance measurement—voltmeters—wattmeters—watt hour meters—operation of dynamos—operation of motors, etc.

No. 4. Contains 308 pages, 423 illustrations. Distribution systems—wires and wire calculations—inside, outside, and underground wiring—sign markers—lightning protection—rectifiers—storage battery systems, etc.

No. 5. Contains 278 pages, 379 illustrations. Alternating current principles—alternating current diagrams—the power factor—alternator principles—alternator construction—windings, etc.

No. 6. Contains 272 pages, 538 illustrations. A. C. motors—synchronous and induction motor principles—A. C. commutator motors—induction motors—transformers—losses, construction, connections, tests—converters—rectifiers, etc.

No. 7. Contains 320 pages, 460 illustrations. Alternating current systems—switching devices—circuit breakers—relays—lightning protector apparatus—regulating devices—synchronous condensers—inducting devices—meters—power factor indicators, etc.

No. 8. Contains 298 pages, 330 illustrations. Wave form measurement—switch boards—alternating current wiring—power stations—turbines—management, selection, location, erection, testing, running, care and repair.

No. 9. Contains 576 pages, 849 illustrations. Telephones—telegraph—wireless—electric bells—electric lighting—photometry—electric railways—electric locomotives—car lighting—trolley car operation, etc.

No. 10. Contains 704 pages, 730 illustrations. Miscellaneous applications—motion pictures—gas engine ignition—automobile self-starters and lighting systems—electric vehicles—elevators—cranes—pumps—air compressors—electric heating—electric welding—soldering and brazing—industrial electrolysis—electro-plating—electro-therapeutics—X-rays, etc.

Also a complete ready reference index of the complete library.

The work of the world today is done by electricity. Electricity runs our machines; transports our goods; lights our homes, shops and factories; heats our buildings—is indispensable in hundreds of ways. Opportunities in electricity are greater than ever before. Exact electrical knowledge means more money and greater success for you.

HAWKINS ELECTRICAL GUIDES

give you ALL the electrical information you want, in the shortest, most concise form—namely, by means of questions and answers and unlimited illustrations. No matter how great or how little your previous knowledge of the subject at hand, you "get the point" at once in Hawkins Guides. They are absolutely complete—brought right up-to-date—the last volumes are just off the press.

FLEXIBLE POCKET-SIZE TEXTS Arranged for Home Study and Reference

They are the handiest books to read and to use, ever produced. In flexible, black covers, leather binding—just the right size—5x6½ inches—to fit in your pocket, so that you can carry each single volume about with you until you have mastered its contents. The whole set fits easily in the hollow of your arm, and still there are actually 3,500 pages and 4,700 illustrations.

10 Practical Volumes. 3500 Pages. 4700 Illustrations

WHAT USERS SAY

"Every Electrician, Operating Engineer or Student who wants to advance himself in the Electrical field should have a set of these books."

JOHN KELLEY, 116 Union St., Newark, Ohio.

"For the man not getting a college training, and even in that case, I can sincerely say I do not believe there is a better set of books on the market today."

LOYD D. HUFFMAN, Dayton, Ohio.

"We consider Hawkins Electrical Guides the most compact and complete set of electrical references in the market."

NOBLE ELECTRIC WORKS, Monterey, Cal.

"Hawkins surely knows the art of condensing information."

ELDRIDGE F. BALL, Buckland, Conn.

"I think they should be in the hands of everyone who has anything to do with Electricity."

T. E. MURPHY, Orange, Va.

"For the practical electrician, they are the best books published—worth many times their price."

J. C. WAGNER, Wyoming, Ill.

"I have gained valuable information from them which has helped me directly in my line of work."

HENRY NORDENBERG, Hoboken, N. J.

"They are wonderful value. Everything is as clear and concise. Even one who had no knowledge of Electricity would have no difficulty in grasping the facts."

F. L. TAYLOR, Amesbury, Mass.

"It is the best work an apprentice can study if he wants to get ahead in his trade. As a reference for the experienced worker HAWKINS ELECTRICAL GUIDES are unexcelled."

J. NECKELMAN, Chillicothe, Mo.

THE ENTIRE SET of 10 VOLUMES SHIPPED TO YOU FREE

Send no money. Examine the books first. Use them for seven days in connection with your work, and decide for yourself that they are the most complete, the most helpful and the clearest written electrical books ever published. This unusual offer is a sign of our confidence in the Guides.

The Way to go Back to the

The Lure of the Farm—that is in every man's heart, the thrill of the soil, the craving to create, to see things grow and to grow himself, to plant and harvest, to feed and be fed, to build up physical strength and financial independence, to reap the full reward of his own efforts, to breathe deep of clean country air, to watch his family learning lessons from the birds and flowers, to rest his eyes and his mind with distant views of field and stream, to become gloriously tired, ravenously hungry and to fall asleep with the restful noises of the rural night murmuring to him, to walk upon his own land, to rest upon his own front porch, to make sure the comfort and independence of his future — this is the lure of the country home — the joy of the farm.

The Farmer's

FOR the man who wants to go back to the farm and for the man on the farm who wants to increase his earnings — here is your guide to success.

Farm—and make Money

THAT model farm that is going to take you away from the crowded city and make you independent is right here within the pages of the Farmer's Cyclopaedia.

It cost Uncle Sam \$4,000,000 to put this farm on paper for you. It took the U. S. Dept. of Agriculture ten full years to gather the whole truth about this ideal American farm. Yet we will sell it all to you for a few cents a day. (Read the coupon.)

The Farmer's Cyclopaedia covers the whole subject of farming; from buildings to care of the soil, from farm management to marketing the crops. It takes seven big books to hold the results of all these government tests and investigations, but we will sell them all to you for a few cents a day.

This Cyclopaedia is the greatest farm implement ever produced. It will teach farming to a man who has never seen a farm; and will help the most experienced farmer in every branch of his work. It's the whole farm, and every kind of a farm, put on paper by experts. No matter

where you want to farm, North, East, South or West—no matter what kind of a farm you have or want, the Farmer's Cyclopaedia will tell you how to run it.

Among its thousands of facts, it will tell you all about the following subjects:

Farm Buildings—how to plan and build on the farm.

Farm Management—U. S. Government Tests.

Farm Machinery—how to run it, care for it, use it.

All about Poultry—covers the entire subject.

Feed and Care of Dairy Cows—this alone worth the price.

Dry Farming—full details of this great movement.

Intensive Farming—the way to double your profits.

Domestic Science—how to keep house easily, economically, attractively.

Fruit—how to raise it, protect it, get larger yield.

Crops—Government experts tell all about all kinds of crops.

Irrigation—how deserts were turned into gardens.

And all those special undertakings that are now making small farms so profitable.

The Hon. F. D. Coburn, the world's master farmer, says:

"Today, farms are run less by hand-power and more by brain-power.... That is why farm life says to the city man: 'Come out to the land and share in this prosperity.... That is why I stand back of these books, this great FARMER'S CYCLOPEDIA.... These volumes cover every important phase of farming, from the planting and the growing, to the home life and the home."

FREE—We give Coburn's Manual, the wonderful book in which he analyzes and explains the big service rendered by the cyclopaedia, to every purchaser of the FARMER'S CYCLOPEDIA. (Don't forget the coupon.)

Just think what you get for some easy monthly payments: 7 great volumes, strongly bound; 5,000 pages of proven farming facts; 3,000,000 words of the most valuable farm helps; pictures, charts and diagrams by the hundred. \$1 down and \$3 per month until \$29.50 have been paid—that's all it costs you to own these \$4,000,000 worth of farming facts. (Now cut out and fill in the coupon.)

Do you want to make more money out of your truck garden, your chickens and eggs, your dairy, your hogs, grain-fields, orchards; do you want to know how to plant, cultivate and harvest some special crop; do you want to know how to sell at the best market prices?—then mail that coupon now.

YOU RUN NO RISK—If the books do not please you after ten days' reading, send them back and we will at once return your dollar. Here is a great opportunity. No other books are like them. They will tell you how to make more money—with less work—from any farm. So mail the coupon.

Doubleday,
Page & Co.,
Department 304,
Garden City, N. Y.

I want to see that Farmer's Cyclopaedia, all of the 7 volumes and the (free) Coburn Manual. Here's my dollar. If I like the books I will send \$3 each month until \$29.50 has been paid. If I don't like them I'll send them back in ten days and you are to return my dollar.

LEARN AUTOS

Where Autos are Made

Detroit is a city of motors. Eighty-five per cent of the motor cars in the United States are said to be made here. Here are located 40 or more auto factories, hundreds of parts makers. Detroit *makes* automobiles, *sees* automobiles, *thinks* automobiles day and night. Detroit is the *place* to learn the auto industry, and the Detroit Y. M. C. A. Auto School is the *school* at which to learn it.

Backed by Automobile Factories

The automobile men of Detroit endorse our work without hesitation. The Studebaker, Buick, Hupp, Ford, Packard, Gray Motor, Disco, Zenith, Chalmers, and many others have contributed to our equipment their latest models and designs. Can you ask stronger proof of a school's standing than the fact that the *men who know* give freely their time and money to co-operate with it and aid in its growth.

Not Operated for Profit

The Y. M. C. A. Auto School is not run for profit. Our purpose is to give our students the training necessary to get and hold good paying positions in the rapidly growing automobile industry. Tuition goes to procuring the highest class of instructors and the best of equipment. The automobile business is crying for trained men,—testers, chauffeurs, inspectors, salesmen, assemblers, repair men, bearing scrapers, motor mechanics of every description. Factories, dealers and garages join in the call. We fit you for these positions. Will you take advantage of this opportunity.

Tuition Includes Membership in the "Y"

Tuition at the Y. M. C. A. Auto School is low—and includes a year's membership in the "Y." Our big Club House is at your disposal during time off. Reading rooms, lounging rooms, gymnasium, swimming pool, billiard and pool tables, bowling alleys, with five floors of dormitories and restaurant at low rates. You are assured of not only thorough and competent instruction, but good companionship and clean living conditions with the comforts of home and club life combined.

Don't Visit Detroit Without Seeing Us

You want to consider everything carefully before you enroll for any course of instruction. Come and look us over, whatever purpose brings you to Detroit. Get all the particulars of this school, get the records of our instructors, hear what auto factories and automobile men have to say about us, see for yourself our comfortable quarters and big equipment. We will be glad to see you and show you around whether you enroll or not. Day and night classes. Start at any time. The average time required is 6 weeks for day course, and 12 weeks for night course.

Aviation

Learn Practical Aeronautics By Mail

FOR the first time in the History of Aviation, a Practical and Efficient Correspondence Course is waiting for you under the direction of Qualified Aviators and Aeroplane Builders, and a **Special Offer of Great Importance** is yours, if you will send the coupon at once.

Aviation is in its infancy. It stands today where the automobile and moving picture business did ten years ago. And the big men, the money kings in these colossal enterprises were ten years ago obscure mechanics with less opportunity than you have today with this wonderful Course in Practical Aeronautics. Now is the time to rise with the tide that means to you both fame and fortune.

Earn \$50 to \$500 a Week!

Today there is a great demand for men in all branches of Aviation. Experts in Aeronautics command tremendous salaries. Government Branches, Aero Societies, Aeroplane Builders, Repair Shops and others are clamoring for trained men.

We prepare you by mail to train for flying—at home—in spare time to fill any of these positions:

Aeroplane Mechanic
Aeroplane Builder **Aeronautical Engineer**
Aeroplane Salesman
Aeroplane Assembler **Aeroplane Repairman**
Aeronautical Contractor
Aeronautical Instructor **Aeroplane Inspector**

No matter what your present business may be, equip yourself **NOW** to take up the new profession of Practical Aeronautics. Send the Coupon today for full particulars of our Course and the Special Offer we are now making. This is your opportunity.

Highest Endorsement By Aviation Authorities

This wonderful Course is highly endorsed by leaders in Aviation and Flying Organizations. It has their unqualified approval as a quick and reliable basic training for the business of Aviation. Under the personal direction of Mr. Bud Morris, well known Aviator and Instructor, assisted by a distinguished Staff of Aviators, Aeroplane Manufacturers, and Aeronautical Engineers, you learn all about this fascinating, profitable profession. Every Lesson, every Lecture, every Blue Print and Bulletin self-explanatory, in plain terms, for quick understanding. Your training is thorough and complete. A common school education is all that is necessary to thoroughly understand the Course. Get the facts today. Send the Free Coupon.

Special Limited Offer-- Write Now

Send the coupon at once for full particulars of our remarkable special offer open to you now. Find out all about the marvelous opportunities that are opening in the Aviation game. This offer is the greatest stepping stone to bigger opportunities ever known. Write today for complete literature, all free and prepaid. You are not obligated in any way. Do not waste time in thinking about it. Act! Send the coupon or a letter or a post card will do.

ALL ABOUT CARPENTRY

Here, in ten volumes, is explained in simple, easily understood English, everything in carpentry and building from the first rough sketch of the architect to the acceptance of the finished structure. Includes wood, stone, steel and reinforced concrete construction, estimating and contracting, interior finishing and decorating, modern house lighting and sanitation. No one interested in the building profession can afford to be without these books—they increase incomes. Valuable alike to the handyman, the experienced carpenter, and the contractor and builder. And—we will send you the entire set of books without a penny down, so you can see them for yourself.

Partial Table of Contents

Mechanical, Freehand, Perspective and Architectural Drawing, Lettering, Pen and Ink Rendering, The Orders, Superintendence, Strength of Materials, Masonry, Reinforced Concrete, Carpentry, Steel Square, Steel-Building, Hardware, Steel Construction, Roof Trusses, Practical Problems, Estimating, Contracts, Specifications, Building Law, Sanitation, Steel Metal Work, Electric Wiring and Lighting.

Fletcher Cunningham, Shreveport, La., writes: "After receiving the books I decided that with their help I could go into the contracting business for myself. I have just closed a contract on which I expect to clear about \$112.00 for two weeks' work."

Shipped FREE!

Yes, we send the entire ten volumes prepaid right to your own home. This offer is open to every resident of the U. S. and Canada. Read—examine them—put them to every test for seven full days and then decide whether or not you can afford to get along without them. If you do not want to keep them, send them back at our expense.

Free Consulting Service

In addition to the books, you get free of charge a year's Consulting Membership in the American Technical Society. Our corps of experts will answer any of your questions for a whole year. The regular price of this service is \$12.00, but you get it free with the set of books.

50 Cents a Week

Yes, send only \$2.00 after the seven days' trial and then \$2.00 a month (50 cents a week) until the total price of \$24.80 has been paid. The regular price on these books is \$50.00, but you get them at the special price of \$24.80, a saving of practically one half. The set consists of ten volumes bound in half black maroon, stamped in gold. 4,760 pages (7110 inches); 4,000 illustrations, full page plates, building plans, diagrams, etc. See it for yourself before you decide to buy.

Send the Coupon

American Technical Society
Dept. R 1134, Chicago, Illinois

Please send the Encyclopedia of Architecture, Carpentry and Building for seven days' examination. If I decide to keep it I will send \$2.00 after seven days and \$2.00 a month until \$24.80 has been paid. Then you will send me a receipt showing that the set of books and Consulting Membership are mine and fully paid for. Otherwise I will return at your expense.

Don't send us a single penny. Just put your name and address in the coupon and send it to us. We will send you the books for seven days' free trial. Don't decide to buy until you have seen them and examined them carefully for seven full days. Send the coupon now.

"A Train Load of Books"

What Clarkson is Doing for the Book Buyer

IN several hundred thousand libraries, in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction to the persons who pride themselves on having the complete works of all the standard authors in the Latin Series artistically printed and bound, almost every book was bought from me. WHY? Because I have no agents and sell you just the book you want—all new—many at a saving of from 50 to 90 per cent. You examine the books in your own home for ten days before paying for them. If not satisfied, return them at my expense—and owe me nothing.

Sample Prices:

When a Man's Man, Publisher's price, \$1.35. My price, 60c.
Epics of the World. My price, 99c.
Famous Pictures. \$5.00-\$11.40.

New American Encyclopedia-Dictionary, 5 vols., 3-4 leather. Pub. price, \$31.00. My price, \$14.75.

Here are De Luxe Sets, Morocco bound, complete works, many of them at less than 25 cents on the dollar. Hugo, Kipling, Poe, Eliot, Dickens, Thackeray, Stevenson and scores of others.

Get My Big, New Catalogue

My new catalogue, sent free for the asking, tells you how to save 50 to 90 per cent on thousands of books. It is a course in literature, giving selections, data of lives and death of authors, the author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed. I sell more books direct to the booklover—the individual reader—the rich man who insists upon his dollar's worth—the man who watches his pennies—and sell them for less money—than any other man in America. Every book new and fresh, and guaranteed to please you—you try for the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

Small Monthly Payments

Use these nine volumes ten days at our expense. Pay nothing in advance or at any time unless you decide that the books will give you all the information you require to earn \$25 to \$50 per week and more.

The Machine Shop Library teaches you as in practice. It is written clearly. It is understandable even to the beginner. It is free from theory and higher mathematics. The illustrations were drawn specially for these books. Over 200 shop experts assisted in making it perfect. It commences with the simplest principles and advances by easy steps. It is as valuable to the apprentice as to the \$50 per week expert. It tells everything you want to know about machine shop practice. These books tell you in three thousand pages and by three thousand illustrations that which it has taken the authors many years to learn.

The Coupon Brings the 9 Vols.

Fill out the attached coupon now. Start perfecting your knowledge of machine shop practice right away. There is no time to be lost. It is a trade or profession in which the more you learn the more you can earn. Your services in this work are needed right now. There are not nearly enough trained men to fill the responsible positions, and there probably never will be. You can earn more than you ever dreamed of earning—and all you need do is return the coupon. That starts you right. The library weighs sixteen pounds, but we pay the charges going, and coming back if you are not pleased.

Quality of Books

The books are bound in dark red morocco-grained cloth, the finest and toughest to be had. The lettering is in gold, and the paper super-calendered. The books are built to last a lifetime, and are an ornament to any home.

McGraw-Hill Book Co., Inc.

Publishers of Books for Machinists Since 1876
239 W. 39th Street, NEW YORK

Machine Shop Practice Complete

You can now be master of machine shop practice. You can now get the required knowledge from records of actual practice.

No other library will do what the Machine Shop Library will do—start you with the simplest principles of machine shop work and carry you safely and surely over every operation in the machine shop of today, no matter how difficult. There is no skimping. There is no mere mentioning of a subject—on the other hand, every topic taken up is treated at sufficient length for you to master it.

Why the Machine Shop Library Is the Standard in America

The eight authors of the Machine Shop Library gained their knowledge of machine shop work with their sleeves rolled up. They are practical men. That is why the Machine Shop Library is accepted as the standard in America. You are supplied with genuine working data. No theories are advanced. You are not told what might be done—you are told what should be done, and how to do it, as taught by experience.

All the Information You Need to Reach the High Position

From the Machine Shop Library you gain expert and accurate knowledge. You gain this knowledge quickly. It is knowledge that would cost you much time and money if procured from any other source. You save long years of hard work at low pay. You have before you for constant reference and study information that has taken eight authors and over two hundred other machine shop experts years to gather. It is all the information you need to reach the high position in the machine shop field.

McGraw-Hill Book Company, Inc.

NOT ONE CENT IN ADVANCE
FILL OUT THIS COUPON TODAY

FREE Complete \$15⁰⁰ Set of Drawing Instruments

YES, I will give you this complete set of drawing instruments absolutely free. They are regular working instruments—the kind I use myself and they do not cost you a cent.

And besides the instruments in an exquisite plush lined leather case, I will give you absolutely free a 20x25 inch drawing board, a 24 inch T square, a 12 inch rule, a supply of drawing paper, two triangles and a French curve, pencils, erasers, thumb tacks, etc., etc. A complete draftsman's working outfit. And I give it to the men who get my personal instruction absolutely free.

Be a Draftsman!

Draw \$125 to \$175 per month

There is an urgent demand for skilled draftsmen. Companies are issuing calls every day for men to fill positions paying from \$125.00 to \$175.00 per month. Work is light, pleasant and profitable.

Chief Draftsman *Will Instruct You Personally*

I am Chief Draftsman of a large and well known firm. I have been doing the highest paying expert drafting work for a quarter of a century and I know just the kind of training that is demanded from men who get the big salaries. I will give you personal instruction, deal individually with you and give you up-to-date, practical working plans just as your ability and advancement require. I train you by giving you actual work—practical work, the kind that you must be able to do in order to hold permanent, big paying positions. I give you my individual instruction. If your work is right, I will advance you rapidly. If it is wrong, I will show you where, and make you do it right, and do all I can to make you an expert draftsman and designer in a short time.

Write Today Without Fail
Pay as You Wish! What I want is the RIGHT KIND of men. Don't

bother about expense. I will give you the working outfit free if you get in at once. I charge a very small fee for training you to be an experienced draftsman. You can pay the small cost as suits you best. My object is to develop experienced draftsmen.

REAL ESTATE AND FARM LANDS

FREE Book of Florida Facts. If interested in Florida, before visiting or settling in this wonderful state of fragrant flowers and sunshine, write Lake County Land Owners' Association, No. 23 Lloyd St., Fruitland Park, Florida, for free book of actual photographs and real conservative facts concerning this State. There is just, good, better and best land in Florida. This book will teach you what is best and why. The members of the Association are not land agents; they simply wish to tell actual facts to those really interested in the State. They have no time to waste on curiosity seekers, children or people who expect to grow rich without effort, but to those of character, energy, some capital, with a desire to learn more of the opportunities in this most prosperous State we would be glad to give fullest information.

Men Mechanically Inclined

Are Successful in the Automobile and Tractor Business

The Sweeney System Teaches You This Business
By the *Only Practical Method*

We Tell You and Show You—*You Do the Work*

FIRST DRIVING LESSONS—A PART OF MY CARS

"When you were a boy in school," you remember your teacher used to make you prove all your problems in Arithmetic, and you had to understand the reason why you did, this or that, to get a certain result.

I use the same general plan in teaching you this business. When you are through my school you have proved you know the business and will wonder how you learned it all in such a short time and so easily. There is no guess work in the Sweeney System of teaching. You put your overalls on; forget that books were ever printed and dig in with a capable instructor at your elbow to first tell you, then show you, but you do the work.

My course gives you a thorough training in Blacksmithing and Forging (you make your own tools), Oxy-Acetylene welding, Vulcanizing, Machine Shop work, such as Lathe work, Gear cutting and Cylinder boring, also Babbitting and Soldering, Valve grinding and Piston ring fitting.

I pay particular attention to teaching you thoroughly about Self-Starters and I have every make. Storage Batteries and Carburetors. These are the most important parts of an Automobile and always cause the most trouble.

The training you have received in going through these departments comes in mighty handy, when you hit the Black Motor room. Here you have to work on nineteen different makes of engines, learn to time valves, adjust Carburetors, make your Electrical connections, and make them run.

This is a very interesting department and the boys hate to leave it, but they have to learn the construction of cars from tail light to bumper, so we shoot them to our Trouble Department where we have almost every kind of Car in all conditions, and you have to set them up and make them run properly. For example: today you will be fixing up a Ford, then a Franklin, etc. I have tried to get cars, each entirely different in principle and construction, so you will have the best possible experience. Now, naturally you think you are some automobile man, but for your own good I want you to prove it.

I have the biggest garage in Kansas City and the only one in the country run entirely by students and without employing outside help. I send you down there and give you just the same kind of work you would do if you were in your own garage or working for somebody. I have all kind of cars coming in and they extra hand measure crimples. This is the final proof, if you can do the work, and 86% of my students can, you can truthfully say you have learned the business.

The Tractor industry will soon rival the Automobile and on my Tractor farm and in my Factory (you know I make the Famous Sweeney Iron Horse) you get the experience needed to teach you this important business; you help me assemble machines and test them and besides I have nine of the most popular makes of Tractors on my farm. I will give you this training absolutely free for a short time.

In taking my course you are working in a big and completely equipped school, in fact I had the first eight cylinder car owned by any school; the first twelve cylinder, and I know I have the only Owen Magnetic (the car with a thousand speeds) owned by any school.

If you are mechanically inclined and enjoy working around machinery the Automobile and Tractor business offers you pleasanter work and bigger pay than any business in the world.

The reason my school is so large, is solely on account of the success of my students. 70% of my present Students came to my School on the recommendation of my former Students.

If you are ambitious and realize the possibilities of this business, drop me a postal card and I will send you my 72-page catalogue, explaining the Sweeney System and showing pictures of all Departments and equipment, and the Students at work.

E. J. SWEENEY,
President

Free Test Lesson

**Wonderful
Opportunity for Every Ambitious
Man To Decide Whether or Not To—**

Be A Draftsman!

Charles W. Morrey
Pres. of the College
and Head of a Large
Chicago Firm of Engi-
neers and Contractors

Here is, without doubt, the most wonderful offer ever made by a Correspondence or Home Study Institution of any kind. Just think of it! We positively will send you a **Free Test Lesson in Draftsmanship** without any obligation on your part whatever. Just

the coupon brings you **Free Test Lesson**. We don't even ask you to pay postage. We do that.

We send you this **Free Test Lesson** at our expense simply because we want you to see for yourself that the Chicago "Tech" Course in Draftsmanship is the most practical, simplest and easiest to master of any course ever written on the subject. This **Free Test Lesson** also positively proves that our Course will fit you for a Draftsman's position in the shortest possible time. It will prove that our Course will give you the practical knowledge necessary to make you an expert in any branch—Architectural, Structural, Machine Drafting or in the Building Line. It will prove to you that in Draftsmanship lies your future.

Investigate

If you are wide awake to the possibilities of Draftsmanship as a profession—if you are ambitious—you will at once send coupon for this **Free Test Lesson** and investigate the great future for you in this Big Income Paying Profession.

At present, thousands of Draftsmen are needed in all branches. The demand is increasing every day. The wonderful boom in all businesses in this country has created positions for more trained Draftsmen than can be recruited from the ranks for years to come. Our Special Training is the short cut that brings you to the top quickly. If you start **NOW**—in a comparatively short time you will be qualified to step into these big paying positions and

Free

Complete Drawing Outfit
and Full Instructions
in Mechanical Drawing
Sent **FREE**
on Enrollment

See for Yourself

This **Free Lesson** is an absolute test, pure and simple. Send for it today. In the privacy of your home study it, then you will know for yourself whether you are proper material for a successful Draftsman. Other institutions will ask for your money first. You find out later at your own expense, whether you can adapt yourself to the work and succeed in this profession.

We do not charge you one cent for the **Test Lesson**, either now or later. It is absolutely **FREE**. Nor do we obligate you in any way whatever by writing for the **Free Test Lesson**, so send coupon or write postal request today. If you do nothing else but secure the **Free Test Lesson** you will gain such valuable knowledge as will be beneficial to you through life, for the **Free Lesson** gives the very fundamentals of draftsmanship which are helpful to every man.

Earn \$25 to \$100 a Week and More

You can do it—with our help. We have successfully trained thousands of ambitious men—fitted them to qualify and hold the best positions in the business. Some of these men attended our school in Chicago—others learned at home—in spare time, evenings, through our simplified, new Correspondence Method. What we have done for these men we will do for you. No special advance training is necessary. The only qualifications you need possess are the ability to read and write. It will pay you to investigate. It means a big future—Independence, prosperity, happiness for you.

"You Get The Job"

"We've been watching you, young man, and we know you're made of the stuff that wins. The man that cares enough about his future to study an I. C. S. course in his spare time is the kind we want for responsible positions. You're getting your promotion on what you *know*, and I wish we had more like you."

The boss can't take chances. When he has a responsible job to fill, he picks a man *trained* to hold it. He's watching YOU right now, hoping you'll be ready when your opportunity comes.

Start today and train yourself to do some one thing better than others. You can do it in spare time through the International Correspondence Schools. Over 3,000 men reported advancement last year as a result of their I. C. S. training.

The first step those men took was to mark and mail this coupon. Make your start the same way—right now.

Please Mention Popular Mechanics

Don't Envy Successful Men Be One!

BE AN EXPERT ACCOUNTANT

500,000 Firms Need Them—Only 2,000 in America

Today, in America alone, there are over 500,000 large firms that need annual or semi-annual audits. In every large city there are hundreds of openings for trained accountants. As there are only about 2,000 certified public accountants in America, the demand far exceeds the supply. For this reason the incomes and salaries paid are good. Just as soon as you complete the LaSalle Course, your chances for obtaining immediate employment will be excellent—no weeks or months hunting for a job—the position will seek you. If you complete the course with satisfactory grades you will be fully qualified for one of these positions.

We Will Train and Coach You in Your Home—By Mail—in Your Spare Time

Hold your present position. Earn while you learn. Study when you feel most like it. Advance as rapidly or as slowly as you desire. Study a little every day in your leisure time—part of which is now wasted. You can complete our entire course, become a master accountant—in less time than any other because our system will teach you the "working-knacks" and "short-cuts" employed by experts. In this our course differs from all others.

Quit—The "Shirt Sleeve" Class Why "grind" along, day after day, with the other untrained "help" waiting for a raise that may not come—and will be small even if it does? Determine to get out of the "shirt-sleeve" class. Resolve to bid goodby forever to hard work, long hours, and low wages. Decide to become a trained accountant—

Choose Your Future Today—The first thing to do is to mail the coupon. If you don't do it today the chances are you never will. Quit dreaming—act. Write your name and address on Coupon. Mail it. We will send you by return mail the **Free Booklet**: "Ten Years' Promotion in One," also complete information concerning the course and 112 page catalog which explains state examinations, salaries, etc.

La Salle Special Guarantee

We give the student a written agreement signed by our Treasurer, that if the student completes the course with satisfactory grades, and fails to pass the Certified Public Accountants examination held in any state, we will give him special instruction and help—without additional charge—until he does pass.

La Salle Extension University, Dept. 464-H, Chicago
"The World's Greatest Extension University"

Under Personal Supervision of William Arthur Chase, C. P. A.

You will receive your training under the direct personal supervision of William Arthur Chase, an accountant of National prominence, who is Ex-Secretary of Illinois State Board of Examiners in Accountancy.

The Course was prepared by some of the world's most noted accountancy experts. It fully covers the field—Theory of Accounts—Practical Accounting—Cost Accounting—Auditing—Business Law, etc. It will prepare you for the C. P. A. Examination in any state.

The WAGES

Of Bookkeepers, Clerks and other untrained help is from \$12 to \$20 a Week

As long as you neglect to obtain special training you will belong to this class. You will be one of the "help." You must keep your nose on the grindstone. You can't demand a raise, because hundreds of men are waiting to take your job—and for less money. No matter how honest or how faithful you are—or how hard you work—the wages will be no more than \$20 a week. That is the limit—you can take it or leave it. If you want more salary you must obtain special training—there is no other way. Why work hard for wages of from \$12 to \$20 a week when you can become a **Trained Accountant** and draw a real salary instead of mere living expenses.

The SALARY

Of Many Trained Accountants is from \$3,000 to \$10,000 a Year and up.

Trained accountants get large salaries because there are only a few hundred of them—while thousands of firms need them. For this reason an expert can demand and get his pay. Then why don't you become a trained accountant? It is not very difficult, after all. The LaSalle System will make it easy for you. Our course is written in a clear and simple manner. Everything is fully explained. You cannot help but learn. Under the personal supervision of our instructors—and the coaching of our experts—you will soon be qualified to earn a good salary. With our help—if you have average intelligence, and are determined—failure is impossible.

LaSalle Extension University

YOUR Chance Will Come

Born in a log cabin, Abraham Lincoln had little chance to acquire an education. But he was determined to succeed. "Some day," he said, "my chance *will* come." So he studied and got ready. And his chance *DID* come.

Your chance will come. Some day you'll be considered for promotion or for a good job in some other line of work. If you are ready, you'll go up.

And you *CAN* get ready. No matter if your schooling was limited—if you do have to work long hours. If you really want a better job, the International Correspondence Schools can train you for it at home during your spare time.

Every month more than 400 I. C. S. Students voluntarily report promotions or salary increases due to I. C. S. help. What the I. C. S. have done for these men they can do for *YOU*. Mark and mail the coupon NOW.

This Man Specialized in Electrical Meter Engineering!

Now he is superintendent of instruments and meters for a large Electric Light and Power Co. and has 50 men under him. The training he got from our easily mastered, home study course enabled him to step into this big job after only a few months study. What he has done YOU CAN DO!

Write Today for Free Literature with this man's own story of his success. Find out about the exceptional opportunities in this interesting, fascinating, profitable profession. Your name and address is enough. The book is free. No obligation. Write today—NOW. You can have a job like this.

Fort Wayne Correspondence School, Dept. 1194, Fort Wayne, Ind.

Civil Engineers Earn \$1500 to \$5000 a Year!

DON'T take our word for it that these books will fit you to earn \$1500 to \$5000 a year as a Civil Engineer. Get them into your home—free of all charges—and determine their value for yourself. The books themselves, not what we say, must convince you that you need them. Send the coupon now for your free-for-examination set of the brand-new Cyclopedia of Civil Engineering. The demand for Civil Engineers was never greater than today. The enormous development of reinforced concrete construction insures steady employment at big pay to thousands of trained men. The nine thick volumes illustrated above will give you the knowledge you need to qualify for one of these jobs. Send for them today.

50c a Week

This trivial sum—less than most of us pay for tobacco—will soon pay the low introductory price of the Cyclopedia of Civil Engineering. But you must act now! This liberal offer can't be continued indefinitely, so mail the coupon while you can buy this valuable set at a great reduction—and on the easiest of easy-payment plans.

Use Them 7 Days!

The entire nine volumes will be sent to you by prepaid express for seven days' free examination. Don't send a penny—just the coupon! The books are handsomely bound in half red morocco leather, gold stamped, and contain 2800 7 x 10-inch pages and 2000 illustrations, plates, maps, diagrams, etc.

These big, thick volumes contain everything you need to know to become a successful Civil Engineer. They cover surveying, highway construction, railway engineering, earthwork, specifications, estimating, contracts, bridge engineering, masonry, reinforced concrete, water supply, sewers and drains, water power equipment, river and harbor improvements, irrigation engineering, etc., etc. Every line is written in plain, simple English. Every technical point is made perfectly clear.

Free Consulting Service

With each set of this new Cyclopedia we give without charge a year's Consulting Membership in the American Technical Society. This entitles you to the privilege of submitting your perplexing problems to our corps of Civil Engineers. Such a membership regularly costs \$12.00, but in connection with this special offer you don't pay a cent for it. Remember, this service is absolutely unlimited. Ask as many questions as you wish for an entire year. Send the coupon now—and for yourself what this opportunity means to you.

Don't Send a Penny—Just the Coupon!

The nine-volume set will come to you by prepaid express for a full week's examination. If you keep it, send only \$1.50 within seven days, and then \$2.00 a month—50c a week—until the introductory price of \$20.00 has been paid. This is \$15.50 less than the regular price of \$45. If you don't want the books, send them back at our expense and you won't be out a penny.

This is a remarkable opportunity to prepare yourself—in your spare time—for the fascinating, highly-paid work of a Civil Engineer. If you live within the borders of the United States and Canada, fill in and mail the coupon today—now!

American Technical Society, Dept. C1194, Chicago, U. S. A.

**American Technical Society
Dept. C1194, Chicago, U. S. A.**

Please send me the nine volumes of the Cyclopedia of Civil Engineering for seven days' free examination. If I decide to buy, I will send \$2.00 within seven days and the balance at \$2.00 a month until \$20.00 has been paid. Then you send me a receipt showing that the set of books and the \$12.00 consulting membership are mine and fully paid for. If I think that I can't part with the books after the seven days' trial I will return them at your expense.

LEARN THE TIRE REPAIR BUSINESS

MONEY-BACK GUARANTEE

We guarantee to qualify our students to go into business for themselves or to hold positions paying \$18.00 to \$40.00 weekly or return their money. The demand for trained repairmen is greater than the supply.

MAKE \$2500 TO \$10,000 YEARLY

There is no limit to what a man can make. Men are becoming rich in this business. You can start business with small capital. Work comes easily, profits are big, business grows fast. Trained tire repair men get work quickly and hold customers. Our graduates are qualified to handle all makes of Cord Tires and can get factories O. K. School open all the year—Enter classes any day. Graduates in 4 to 6 weeks.

GRADUATES ARE COMPLETELY SATISFIED

San Antonio, Tex., Nov. 4th, 1916.

The Akron Tire Repair School:

Gentlemen: I did not know a thing about an automobile tire when I entered your school. But under the able and plain instructions of your chief instructor, I have mastered the science of tire repair in the comparatively short time of four weeks. One thing about the Akron Tire Repair School is that it teaches how to repair Blacowen and Goodrich Cord Tires, a feature that the prospective student will not learn in any other tire repair school in existence. That part of the instructions alone has more than repaid me for my long trip to Akron.

Yours, etc.,
A. C. ROSS.

WEEK TRIAL SPECIAL OFFER

Our tuition price is low, but we are making a special WEEK TRIAL OFFER which is the most liberal ever offered by a reliable School—Write at once for "Week Trial Special Offer," school literature and students' letters—All absolutely Free.

THE AKRON TIRE REPAIR SCHOOL

The Largest and Best Equipped, Exclusive Tire Repair School
A. C. ZELLER, President 64 Tire Bldg., 46-48 Main St., AKRON, OHIO

AKRON Tire Repair School:

Gentlemen: I mean say that you certainly have fulfilled your agreement in the letter. I am fully satisfied. The clear, concise instruction and the carefully supervised practice in your excellently equipped place, will be of great value to me.

I think that many tire-repair men already in the business could save themselves money by taking your course, that section which deals with cord tires being alone worth the time spent.

Yours sincerely,
ALEXANDER M. JUNGAR.

Detroit, Mich., October 14th, 1916.

I Tell You You Can!

Be a success and command big pay. You can easily do it if you will **only prepare yourself!** Why will men neglect to prepare themselves, when trained **electricians** are always in demand at big pay? When employers are **searching** for \$3,000 and \$10,000 men, while this country is crowded with poorly-paid men who could easily qualify for these positions!

\$50 to \$200 a Week

As a Trained

ELECTRICIAN

If you have a common school education **you can** easily qualify **at home** by my new Course in Electricity, no matter if you know nothing at all about electricity now. My Course, while complete and absolutely scientific, explains everything so clearly that any one can understand it and do the work. But this Course is designed to give you a **real** electrical education, to help men become **bigger, better men** — men who can command big pay.

And remember, I give every student a **GUARANTEE BOND** which insures you satisfaction or every dollar of your money refunded. We can make such a guarantee because we know our Course and what it does for our students. Send for free illustrated book telling all about it. **PART OF YOUR SPARE TIME** devoted to this interesting work is all that is needed. You will find it most fascinating, and in a short time your earning power will be greatly increased.

\$17⁰⁰ Electrical Outfit Free:

Every student who enrolls with me now gets a \$17.00 outfit of electrical equipment, instruments and material — **FREE**; also my Quick Money-Making Electrical Course **FREE** as soon as enrolled, so you can earn while learning; you also get **FREE** Employment Service; **FREE** \$100 Scholarship opportunity; **FREE** 5-year Advisory Service. And besides all this I have a pleasant and truly **valuable surprise, FREE**, for every student who answers this ad. Send in the coupon now.

You have one life to live — and time is passing. Make the most of it. Prepare for success. Aim high; you can hit the mark if you will only try. Do it! Tear off the coupon now!

The Chaldean Story of the Flood

Dug Up from the Ruins of Ancient Chaldea

DO YOU KNOW that there has been dug up from the ruins of old Chaldea a complete story of the Flood—the same in every detail as Moses' account in Genesis—and that it was written thousands of years before his version appeared? Hardly one in a million has ever had an opportunity of seeing this startling story—**HAVE YOU?** But it is one of the many thousand curiously interesting accounts in

The Library of Original Sources

now for the first time available to the general public. By purchasing the entire unsold edition from the publishers we secured it at an **absolutely unheard-of reduction**. We offer a few sets to Popular Mechanics readers at a

GREAT BARGAIN Send us the attached coupon **AT ONCE**, and we will tell you how to get the Library on **EASY MONTHLY PAYMENTS**, and mail you **FREE** a book of rare documents showing curious inscriptions of the Ancients. Act quickly. Mail the coupon **NOW**. The book is **FREE**.

OVER 100 RESEARCH SPECIALISTS spent 10 years gathering the contents of this great work. Ancient and remote civilizations in all parts of the globe, age-buried hieroglyphics on monuments, tablets and sun-baked bricks yielded their secrets; untiring workers ransacked the hidden literature of every age to find these "original documents." Nothing like it has ever been attempted or thought of before. You'll be amazed at the wealth of information this unique library contains.

FREE

Twenty Famous Lessons

(PROF. THERON Q. DUMONT'S COMPLETE COURSE)

In Concentration Sent

FREE

A startling offer. Professor Dumont's famous course on success building through Concentration. Now put in handy book form and sent without a penny required in advance. Information and principles for developing the greatest, most vital mental faculty—never before presented to the general public—yours on this wonderful offer if you act at once.

Read below and grasp the meaning of this opportunity. Learn how by special arrangement with this noted psychologist we can place in your hands his crowning triumph—the key to greater influence, greater power, greater prosperity. This complete course in Concentration, first prepared only for his private pupils, sent prepaid for the coupon—yours to examine free at your leisure.

Success Yours

No matter what may be your position, you can rise, you can command circumstances, you can easily overcome difficulties, you can reach a higher plane of success, through the help you will get from this great work.

POWER OF CONCENTRATION

A Few of the Topics
Opportunities Made
Through Concentration
(Shows the Plain Road to the Top.)

Self Mastery
(How to Centralize Attention.)

Training the Will
(A Mighty Force at Your Disposal.)

Mental Poise
(How to Command Conditions.)

Business Success
(How to Coordinate Forces by Concentration.)

Attaining Wealth
(How to Attract Money by Concentration.)

How Courage is Gained
(Use of Concentration to Drive Out Fear.)

Memory by Concentration
(A Very Valuable Lesson.)

Practical Exercises
(Never published before; The actual application of the principles of Concentration.) Etc., etc., etc.

In these twenty lessons, this famous savant gives you in simple, concrete form the results of his lifetime investigations. He shows you how to acquire that mental quality of concentration which has made world-known leaders like Napoleon, Edison, Morgan, Roosevelt. He shows you how to focus your ideas, to get away from mind wandering, to eliminate day dreams—how to use your mind like an ever-ready tool and to accomplish in hours what the man without this ability does only in weeks or months—or never. He tells you clearly why some men lead while others with equal intelligence remain in the ranks. He shows the clear way to make the utmost out of your mentality. No man is your master if you have this wonderful gift of concentration. No degree of success within reason is beyond your grasp. You stand superior to your fellows because you have mental powers beyond theirs. You command circumstances. You attract success. No longer need you wonder why others have risen above you though no better informed than you. You will know why some men seemingly ordinary have gone upward and onward. Professor Dumont shows why. He tells you the secret of their success.

Read the principles laid down so clearly by Professor Dumont. Practice the exercises which he has so carefully worked out. This training is all you need. Simply learn to use your brain—learn to focus, to concentrate and the highway to bigger success is open to you.

Ignition Starting and Lighting

Just Out

The 1917 edition of *Automobile Ignition, Starting and Lighting (with Questions and Answers)*, by Charles B. Hayward, is just off the press. It contains 750 pages, 480 wiring diagrams and illustrations, and is flexibly bound in genuine morocco leather, gold stamped.

The new edition describes the electrical equipment of all standard makes of automobiles. It is written in easily-understood language, and all difficult points are made perfectly clear. No matter what electrical equipment your car may have, this handy volume will help you to locate troubles and show you how to overcome them. Used in many automobile schools as an instruction book, and by thousands of experienced repairmen.

PRINCIPAL SUBJECTS COVERED

The Electric Circuit—Magnetism—Induction Principles in Generators and Motors—Ignition Principles—Sources of Current—Ignition Systems (Dual, Duplex, Double Spark, Ford Magneto)—Spark Timing—Modern Battery Ignition Systems—Testing—Adjustment and Maintenance—Lighting Equipment—Analysis of Types with Wiring Diagrams, including Auto-Lite, Bijur, Bosch-Kushmore, Delco, Delco-Bureau, Gray & Davis, Lucas-Nortia, Remy, Siemens-Hell, Sylvania, U. S. L., Warner, Westinghouse, etc.—Installing Ford Starlines—Starting and Lighting Storage Batteries—Summary of Instructions, with Questions and Answers.

Sold at All Bookstores

All progressive bookstores stock this handbook. If your dealer can't supply you, send us \$2.50 and we'll send you a copy by mail. Examine it carefully—use it at your work for five days. If it fails to meet with your expectations, return it and get your money back.

Send for a copy of our 48-page catalog, which describes our series of 88 handy handbooks. It's free.

Mr. Webb Says—

DEAR MR. HILL:

I have just received a promotion and I feel it would be very selfish in me to pat myself on the back and say "Old boy you are some goer". I want to give you and your associate instructors full credit for the great service you have rendered me through your course in

D. B. WEBB,
Chicago

Advertising & Salesmanship

When I took up your course I was working as a pressman for a large printing concern. After a month's study of your course I wrote a letter in answer to an advertisement that brought me a special delivery reply and secured me a position for which there were 115 other applicants.

Just the other day I called on one of the largest and oldest concerns of its kind in the country and I was given a little folder to figure on. The job would have amounted to about \$50.00. I took the copy, rewrote it, changed the layout and submitted a dummy and sketch and sold the job for \$250.00. Since then, this firm seeks my advice on all its printing. I never would have enjoyed this splendid success without the help of your course.

D. B. WEBB,

3116 Ainslee Street, Chicago.

Success Ten Years Sooner

Mr. Webb is not the only man we have helped. We have started hundreds of others on the road to success. We can shorten this road for you by at least ten years, because our instructors are practical men—not "professional" teachers. Each of them has won success in the field of advertising and salesmanship. You get the full benefit of all that they have learned from years of practical experience. The course is nine-tenths practice and only one-tenth theory. You "learn by doing."

Free Personal Analysis

You can succeed in ADVERTISING AND SALESMANSHIP—if we accept you. Send coupon for personal analysis chart and be analyzed free by a well known Vocational Director. He will tell you if you are qualified to succeed as a sales or advertising manager. Only those so qualified are accepted.

ELECTRICAL ENGINEER'S
HANDBOOK

50¢

ELECTRICITY!

HERE'S just the book on Electricity that you need to answer your many questions—to solve your knotty problems, to teach you new kinks, to be your memory for tables, rules, formulas and other Electrical and Mechanical facts that some people try to carry in their heads—and fail.

With this "Little Giant" I. C. S. Electrical Engineer's Handbook in your pocket, tool chest, on your work bench, drawing table or desk, an hour or a day need not be lost "digging up" some forgotten rule, some unfamiliar fact; you'll just turn to the very complete index and get it "in a jiffy." Just a few of the subjects treated are:

Electricity and Magnetism; Electrical Symbols; Batteries; Circuits; Magnets; Direct and Alternating Currents; Dynamos and Motors; Belts; Shafting; Electroplating; Electrical Measurements; Meters; Arc and Incandescent Lamps; Mercury Arc Rectifiers; Transformers; Insulation; Electric Cars; Single and Multiple-Unit Control; Transmission; Rail Welding; Tables of Wires—Sizes, Capacities, etc.; Mathematical Rules, Formulas, Symbols; Tables of Constants, Equivalents, Roots, Powers, Reciprocals, Areas, Weights and Measures; Chemistry; Properties of Metals; Principles of Mechanics; First Aid, etc.

The Electrical Engineer's Handbook is one of 22 I. C. S. Handbooks covering 22 Technical, Scientific and Commercial subjects, all crowded with value. They have the contents of a full-size book condensed into pocket-size ready to go with you anywhere and be at your instant command. They are substantially bound in cloth, red edges, goldleaf stamping, printed from new, clear, readable type on good quality book paper. There is an illustration at every point where a picture will help. Hundreds of thousands have been sold on a money-back guarantee of satisfaction.

The regular price is \$1.25, but for a LIMITED TIME you can buy the ones you want, postpaid, delivery guaranteed, for only 50 cents each.

You Run No Risk! Money Back if Desired!

Never Mind How **STRONG**
You are—

What d'ye Know?

Today it's a battle of wits—and *brains* win. Muscle and brawn don't count so much as they used to.

The great question now is "What do you Know?" It draws the line between failure and success.

What do *you* know? Have you special ability in any one line? Could *you* "make good" in a big job right now?

For 25 years the International Correspondence Schools have been helping men to get ready for better work and bigger salaries. They can do the same for YOU. No matter where you live, what hours you work, or how little your education—the I. C. S. can train you for a more important and better-paying position.

Mark and mail the attached coupon—it won't obligate you in the least—it won't cost you anything to find out how you can get this salary-raising ability right in your own home, during your spare time.

MARK THE COUPON NOW

INTERNATIONAL CORRESPONDENCE SCHOOLS

Box 5564, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

Perfect Your Memory —and Command What Salary You Will

Your earning power—your position in life—depend upon your memory. The ability to recall needed facts and figures—to concentrate on matters on hand—to grasp the

Dickson Memory Training Endorsed by Noted Men

Albert Hubbard: "Good memory is essential to all achievement. The Dickson System of Memory Training—if I understand it—and I do understand it—is very simple. If you want to enlarge your arm to increase the power and strength of your muscles, you exercise it. The same with your mind."

Carl F. Schader, California: "I have been improved physically and mentally beyond my own expectations by the continued studying of your course. I unhesitatingly recommend it to those who desire to increase their Power of Personality."

Wm. H. Weeks, New York Attorney: "After a thorough trial of your method of mental and memory training, I find it to be not only first class—simply wonderful! I can truthfully say that I would not be again without the benefits I have received from your study for \$10,000."

**For FREE Book—
"How to Remember"
Mail the Coupon**

details of a proposition instantly—to be able to make decisions quickly and safely—means everything to the achievement of success.

Men of Power Are Men of Trained Memories

Roosevelt, Wilson, Edison—America's men of power are uniformly men of trained memories. Train your memory the *Dickson way*, and you endow your personality with that "divine spark" that enables you to make your mind "forget-proof"—to overcome self-consciousness and bashfulness—that gives complete mastery over every situation—that will make you a power to be reckoned with in social, business or public life.

I Will Give You a "Steel Trap" Memory

A tenacious memory cannot rightfully be called a "gift." My experience with 50,000 students—men with exceptionally poor memories who have developed them to amazing perfection—men with remarkably good memories who have made them even better—has proven the value of systematic training of the Memory. What Dickson training has done for these men, it will do for you—will teach you to think and talk connectedly—will increase your earning power.

Special Offer! "How to Speak in Public"—FREE

If you enroll at once for this course in memory training you'll receive absolutely FREE—this valuable book, "How to Speak in Public," Delancey edition, handsomely bound. Teaches you to express yourself clearly and convincingly whether talking to one person or a thousand. Full particulars of this offer, together with my remarkable booklet, "How to Remember," and a copy of my unique copyrighted "Memory Test," are yours free—simply fill in the coupon, tear off, and mail.

Stop forgetting

PROF. HENRY DICKSON,
Principal, Dickson School of Memory,
1705 Beuret Building, Chicago

Please send me free of charge and without obligation your booklet, "How to Remember," and a copy of your copyrighted "Memory Test." Give me facts on your special offer of a free copy of "How to Speak in Public."

Come to Detroit The Automobile Center and

LEARN THE AUTOMOBILE BUSINESS

DETROIT trained men get preference and get jobs quickly. No other city can give what Detroit offers. Think what it means to learn in the Michigan State Auto School. Factories endorse our school, glad to employ our graduates or offer them territory in which to sell cars and start garages. Unlimited opportunities. 71% of Automobiles are made in Detroit. You're right in the Heart of the Auto Industry. Men are needed everywhere as testers, repairmen, chauffeurs, garage men, and salesmen. Hundreds of our graduates start in business for themselves.

Get Better Job—or—Go in Business

We teach you to handle any auto proposition. You graduate in from ten to twelve weeks. Our equipment is new, up-to-the-minute, and complete. No old, obsolete motors, chassis or electrical equipment used. Students actually build cars from start to finish, getting factory training in assembling, block-testing, road-testing, everything. Special complete course in Oxy-Acetylene brazing, welding and cutting, separate from regular course. Learn to time motors, rebore cylinders, adjust carburetors, magnetos, valves and bearings quickly and accurately. Six-cylinder Lozier,

Chalmers "6," Detroit "6," Overland, and 8-cylinder King are used for road instruction. We have a new Chalmers "6-30" chassis with 3400-r. p. m. motor, the latest thing out.

Willis-Knight 1917 chassis	Saxon "6" 1917 chassis
Studebaker "6" 1917 chassis	Maxwell 1917 chassis
Hudson Super-Six 1917 chassis	Oldsmobile "8" 1917 chassis
Cole "8" 1917 chassis	Briscoe 1917 chassis
Detroit Electric 1917 chassis	Winton "6" chassis

All completely equipped for students to work on. We have more than 25 motors in our block test department—2 cyl., 4 cyl., 6 cyl., 8 cyl., and 12 cyl. Our electrical department is complete, having every standard starting, lighting, and ignition system, including Delco System as used in Buick, Hudson, and Packard Twin "6."

Detroit Is the Place to Learn—Start Any Time

There are 44 auto factories in Detroit and 140 accessories and parts factories. Our students have the privilege of going through any or all of them. We operate Starting, Lighting, Ignition Service Station. This has added thousands of dollars' worth of equipment and makes our electrical department unequalled. Students get actual experience in handling all kinds of electrical auto equipment and taking care of trouble. We have just installed a Sprague Electric Dynamometer for block-testing purposes for students' use. Ours is the only Auto

school having this equipment. Auto factories need Dynamometer men constantly. Factories and garages are paying big salaries to men who know how to handle electrical equipment quickly and properly. Detroit is the automobile center. You get practical instruction. School open all the year. Enter classes any time, any day. Three classes daily: morning, afternoon, evening. All instructors are members of the Society of Automobile Engineers (S.A.E.) There is a great demand for Michigan State Auto School students. Auto factories write and phone for men constantly.

Follow the Crowd to the Michigan State Auto School. Come to Detroit

Money-Back Guarantee

We guarantee to qualify you in a short time for a position as chauffeur, repair man, tester, demonstrator, garage man, or automobile dealer, paying from \$75 to \$100 monthly and refund your money. We have constantly more requests for Detroit trained men at \$1000 salaries than we can supply.

THIS IS ONE OF THE JANUARY 1916 CLASSES

Additional Building and Equipment

Thousands of dollars' worth of new equipment, plenty of room for students to work, at 687-89-91 Woodward Ave. In addition to our building at 11-19 Selden Ave. Our school has grown by leaps and bounds, students come from all over the world. We are constantly adding new equipment. Our electrical department is thorough and complete.

Factory Co-Operation

We have completed arrangements to put them in touch with men who intend going into business for themselves. Men who know the auto business from A to Z are in biggest demand. Remember, the price of course is based on giving full value. Graduates in the complete auto course are competent to handle farm tractors.

Auto Factories Endorse Our School

The Leading Automobile factories in Detroit, as well as in other cities, endorse our school. They have been watching our school and graduates for years and are satisfied. They are putting their latest model, complete chassis in our school for students to work on. They are employing our graduates in their factories and service stations and assisting them in opening garages and substations. They allow our students to go through their factories. They need trained, competent men and are asking for more of our graduates constantly. The Michigan State Auto School in Detroit, the heart of the Auto Industry, is endorsed by the Leading Auto Factories, is receiving their hearty co-operation. What better endorsement could you ask?

44 AUTOMOBILE FACTORIES 140 ACCESSORY FACTORIES

With the New Building and Thousands of Dollars Worth of New Equipment, Our's is the Largest Exclusive Auto School in the Country

We teach the newest and best way to re-bore cylinders as a part of the complete Auto Course. No need to have big, heavy, expensive machines. This is very important instruction.

These men are getting final instructions after they have taken down and rebuilt a new up-to-date 6 cyl. motor.

This is a partial view of our Classroom room showing up-to-date chassis for students' use.

A new 12 cyl. motor connected to our Sprague Electric Dynamometer in Block Test Dept. for students' use.

DECEMBER 1916 CLASS IN MECHANICAL LECTURE ROOM

This is the first work a student receives. A 6 cyl. 1917 Saxon "Out-open" chassis is used to make perfectly clear and practical the first instructions. There were 350 men set for this picture. The Electrical Lecture room is the same size. The classes are divided so that more intense work can be done on each subject. Every man is given personal help and his progress through the school is watched carefully.

This is a section of the Brazing, Welding and Cutting Department. Each man handles the torches and works with an individual outfit.

View showing about 18 motors in the Block Test Department. Sprague Electric Dynamometer shown in center background.

A close view of Saxon "Out-open" chassis used in Mechanical Lecture room. Hidden parts are cut open and electrically lighted.

Students getting personal instructions on 1915 chassis.

Students making final test on Maxwell 1917 unit power plant motor.

Complete working Duesenberg System as used in Buick, Hupmobile, and Packard Twin "6."

Battery Charging room, showing lighted switchboard and distilled water rack.

These cuts were all made from actual photographs taken in our school.

Big Money in Electricity

The Electrical industries offer wonderful opportunities to boys with a liking for Electricity. The salaries paid to trained men are large, promotion comes rapidly and, best of all, the work is fascinating.

The discovery and development of new lines (such as wireless telegraphy and telephony), from time to time, promise attractive and paying fields to those who wish to specialize. The *will to do* and *Special Training* will bring success to you.

The International Correspondence Schools can help you to become an expert in electrical work, no matter what branch you like best. Thousands of young men have already won success through I. C. S. help. You can do as well as anybody, if you try. Everything is made so clear that you can learn in your spare time, regardless of where you live or what your work. No books to buy.

There's big money in Electricity. Get after it by marking and mailing the Coupon today. *Finding out costs you nothing.*

SHORTHAND IN 30 DAYS

We absolutely guarantee to teach shorthand complete in only thirty days. You can learn in spare time in your own home, no matter where you live. No need to spend months as with old systems. Boyd's Reliable System is easy to learn—easy to write—easy to read. Simple. Practical. Speedy. Sure. No ruled lines—no positions—no shuffling as in other systems. No long lists of word signs to confuse. Only nine characters to learn and you have the entire English language at your absolute command. The best system for stenographers, private secretaries, newspaper reporters and railroad men. Lawyers, ministers, teachers, physicians, literary folk and business men and women may now learn shorthand for their own use. Does not take continual daily practice as with other systems. Our graduates hold high grade positions everywhere. Send today for booklet, testimonials, etc.

Chicago Correspondence Schools
969 Unity Bldg., CHICAGO, ILL.

The complete LaSalle organization consists of more than 300 business experts, professional men, text writers, instructors and assistants, including recognition theories in all departments.

Over 25,000

ambitious men in all lines of railroad and industrial traffic work, throughout the United States, have benefited through membership in our Department of Interstate Commerce and Railway Traffic. More than

\$150,000

has been expended by our institution in organizing and perfecting the training and service rendered members of this department, which is now under the direct, personal supervision of

MR. N. D. CHAPIN

Formerly Chief of Traffic Bureau, N. Y. C. Lines

Mr. Chapin has been engaged to devote his entire time to this work, and is assisted by a selected corps of railroad and industrial traffic experts, together with an organization of more than 300 people.

LaSalle Training Fully Recognized

The LaSalle Course in Interstate Commerce and Railway Traffic is now fully recognized by the country's greatest traffic authorities as the highest type of traffic training now available. It has been adopted as representing the highest standard of technical training, information and practice, in the matter of Interstate Commerce, Railway and Industrial management, in important traffic centers and is approved by many trunk railroads, such as the following:

**Baltimore & Ohio R. R., Louisville & Nashville R. R.,
Cumberland Valley R. R., Erie R. R.,
Pennsylvania Lines West**

The course is a complete, up-to-date, and thoroughly practical system of training, covering all phases of modern traffic operations. It is a "100 man power" course, conducted by thoroughly qualified traffic experts who have risen from the ranks. No other course compares with it. Should not be confused with so-called traffic clubs or traffic associations. Hundreds of men are now holding big positions and drawing greatly increased salaries as a direct result of LaSalle training and service.

A few of the many LaSalle Students Now Industrial Traffic Managers: M. E. P. Traffic Manager, Hammermill Paper Co., Erie, Pa.; T. J. Bennett, Traffic Mgr., American Steel Foundries, Chicago; P. D. Street, Traffic Mgr., The Garland Corp., Pittsburg; R. H. Miller, Traffic Mgr., U. S. Light and Heating Co., Niagara Falls, N. Y.; J. D. Quinn, Traffic Mgr., Franklin Steel Works, Franklin, Pa.; Thos. S. Barry, Traffic Mgr. for the City of Pyawtucket, R. I.; Seth Tate, Traffic Mgr., Higginsbottom, Daily-Logan Co., Dallas, Texas; K. L. Crickman, Traffic Mgr., Great Western Smelting & Refining Co., St. Louis; R. Denham, Traffic Mgr., Lockwood Engineering Co., Cleveland; O. R. H. Culbertson, Traffic Mgr., Seattle Construction & Dry Dock Co., Seattle, Wash.

Institute.

Write me at once—**TODAY!** Just send the coupon or a postal. I will give you 20 complete lessons in practical electricity **FREE!** Think of it! My personal and individual instruction for 20 lessons without a cent of cost to you if you act quick. No charge to you for these 20 lessons now or later. I make this sensational offer to secure a few more live students—to show, too, how quickly I can make you a **Trained Electrician** no matter where you live, or what you do. But you must act at once! This offer closes in 23 days! Remember these free lessons are not merely sample lessons, but are a regular part of my full and complete course in electricity. Send the coupon without delay—**TODAY!**

Earn \$2,500 to \$4,000 a Year

You can now qualify at home during your spare time, and without giving up your present position or occupation, for that most wonderful of all fields open to the ambitious man—the great and growing field of Electricity! Yes, no matter if you don't know a thing about electricity or never had a bit of electrical experience, I will take you in hand and make you a **Trained Electrician** so that you should easily earn **\$2,500 to \$4,000 a year and more.** And I'll do it so quickly and with so little effort on your part, that you'll wonder how it was possible. No books or tools to buy.

Men Wanted

Wherever you go there's always urgent demand for **Expert Electricians** and at big pay. That's because the watchword of the age is, "**DO IT ELECTRICALLY.**" The field of electricity is broadening so fast that there's a big shortage of competent electricians. And the demand is increasing every day.

I Train You By Mail!

I will instruct you personally—make the whole matter so simple for you that you can't help but learn. When you have finished my instructions you are a **Trained Electrician**—ready to take a big paying job or start in for yourself. I show you not only how to do practical electrical work, but how to estimate on jobs so that you can take contracts at big profits. That's what it means to be trained by a man of my practical experience.

I CAN TEACH YOU AT HOME
During Spare time

This is a specimen of my business writing before taking Prof Tambllyn's course in business writing.
July 6, *Clarence P. Weber.*

This is a specimen of my plain business writing after taking lessons from F. W. Tambllyn for 2 months.
Sept. 5 *Clarence P. Weber.*

FREE BOOK

My 32-Page book "How to Become a Good Penman" is FREE to anyone who wants to write better. Contains copies and information that will help you, and beautiful specimens that will make your eyes twinkle with delight.

WRITE FOR IT—use the coupon below—or a postal will do—but

Send at Once!

If you enclose a stamp, I will write your name on a card with white ink, making one of the prettiest specimens of penmanship you ever saw

"A Wonderful Bargain" "It is now about two months since I began your course, and while I am not quite half through with Business Writing, I am delighted with my improvement, which is quite marked as you will see by comparing my present writing with the specimen written when I began. My parents objected to my taking it up, but now see I'm getting a wonderful bargain."

—CLARENCE P. WEBER, Middletown, Del.

Good Writing Is the Very Foundation of Business Success

I can make a good penman of you at your own home, in your spare time, no matter where you live or how poorly you now write. Ever fail to secure a good position because of poor penmanship? Ever know of better positions you could have stepped into if you only wrote a good hand? If not, you're an exception. The advantage of good penmanship is seen all around us.

I have been teaching penmanship by mail over 20 years. I know that any ambitious person can master penmanship just as quickly and thoroughly by my system at home as if in a schoolroom under the personal instruction of the teacher.

BEGIN NOW to learn good handwriting and be ready for the next better position that comes your way. Learn right at home—in your own room, outside of working hours. Your spare time is all I ask.

I teach Spelling and Letter Writing also.

Mr. Weber's wonderful improvement shown in the specimens above was made in 2 months. Hundreds and hundreds of others in all parts of the country are doing the same.

YOU CAN DO AS WELL

Salesmen

Get the Big Pay

Highest salaries are paid Salesmen—because the Salesman is a direct producer of profits. He it is who brings in the orders—dividends depend on his success. The Trained Salesman never lacks a position—thousands of concerns are willing to pay well for his services.

Why Not Be A Salesman?

Surely you can make good in this uncrowded, well-paying field—providing you get the proper training. Read above the letter of Mr. J. E. Wood—Mr. Wood was formerly a carpenter. Then read how Mr. J. L. Debonis—formerly a clerk—is now earning as high as \$100 a day as a Salesman. These letters are not unusual—in our files we have the originals of thousands of such letters from N. S. T. A. Students who have made good—letters from men who have graduated from work that was drudgery to work that brought the opportunity to travel on the finest trains—to live at best hotels—easy hours—financial independence.

Study By Mail

Salesmanship can be mastered through home study as testified to by our record of thousands of successful students covering a period of Ten Years. Our Course of Instruction in Scientific Salesmanship, planned by Master Salesmen—gives you just the training necessary to qualify for a big paying position. It covers the entire field of Salesmanship. Among the many subjects taught are the following—how to prepare a "Selling Talk"—how to approach the prospect—how to manage the interview—how and when to close—how to handle sales correspondence—how to be a good mixer.

Free Employment Bureau Service

Employers everywhere recognize the value of N. S. T. A. Training. We have constantly on file many requests for salesmen than we can possibly fill. The service offered by our Free Employment Bureau is a most valuable one. We put you in touch with good positions while you are still a student—and help you to make good.

FREE This Book

Our Free Book, "A Knight of the Grip" contains testimonials from members now earning from \$100 to \$1000 monthly. It will be accompanied by a Special List of the many lines of businesses in which good positions are now open for Salesmen paying from \$2500 to \$10,000 yearly. A position as Salesman is ready for you—prepare yourself now—mail the coupon below—delay may mean opportunity lost. Address Dept. 507H.

Our Students Make Good

I Now Earn As High as \$100 A Day

"I took your Course two years ago. Was earning \$15 a week then. Am now selling one of the largest firms in the U. S. I have earned more than \$100 a day. You secured me my position. Our Sales Manager is a graduate of yours."
J. L. DEBONIS, 1849 So. Harding Avenue, Chicago, Illinois.

I Earned \$6500 This Year

"Last year I only earned \$600.00 as a clerk. This year I have earned \$6500.00 and have been promoted to Sales Manager, and done it by studying your Course during spare time. Your Employment Bureau offers me many good positions."
C. W. BIRNCHAM, 228 Bank St., Dayton, Ohio.

Your Course Makes Success Easy

"More than two years ago I joined the N. S. T. A. You secured me a good position with one of the best firms in their line. Am making fine wages. Former experience is unnecessary—your Course makes success easy."
Wm. H. Kemler, 192 N. 16th St., E. Chicago, N.J.

I am in the \$2500 to \$10,000 Class

"I was a carpenter. Am now a Salesman and can proudly say I am in the \$2500 to \$10,000 a year class. With I could have more dollars that would bring me the big returns those invested in your Course did."
—J. E. Wood, Tacoma 252-54 Pacific Bldg., San Francisco, California.

Stronger, Clearer Voice—for You!

A SINGING voice, a speaking voice. All weakness, all huskiness, all harshness banished. Special attention to stammering and lisping. A voice with clear, strong tones and increased range. This yours if you will just go through a system of silent, simple exercises under our direction. The famous Feuchtinger Method at last available in this country, is the easy way to build the voice. No strain on vocal organs. Strength given by a natural process (a home method). Permanent results.

Write Today Learn about this wonderful new method now. Recommended by physicians and greatest singers and speakers in Europe. Send for our literature today. Absolutely free and prepaid. It explains everything. Write.

brings these books!

Automobile Engineering

A TWO-CENT STAMP is all that it will cost you to get the five-volume library of Automobile Engineering delivered, prepaid, to your door—for seven days' free examination. The new 1917 edition is just off the press, and explains every practical repair method in simple, easily-understood English.

Hundreds of pages describe all the up-to-date systems of ignition, starting and lighting. Welding, vulcanizing, and commercial garage equipment and operation is thoroughly covered. Carefully cross-indexed, so that the information you want can be referred to instantly. Handsomely bound in flexible morocco leather, gold stamped, these five volumes should be owned by every man interested in automobiles. They contain the combined knowledge of the greatest experts in the business. 2,350 pages (5½x8 in.) and 2,000 illustrations, tables and explanatory diagrams.

And now a great introductory offer is open to those who will send the coupon at once. The regular price of this brand-new edition will be \$25.00, but you can get the complete library for only \$10.00—payable at the rate of 50c A WEEK!

Shipped Free

On 7 Days' Trial

To those who send the coupon immediately we will send the complete five volumes without a penny deposit—express prepaid. Then you can use the books for seven full days—see what they are going to mean to you. After the trial—if you think you can get along without them—send them back to us at our expense. The trial doesn't cost you a penny. But if you decide to buy—send only \$2.00 and then \$2.00 a month—40c a week—until the specially reduced price of \$10.00 has been paid.

Partial List of Subjects:

Explosion Motors, Welding, Motor Construction and Repair, Carburetors and Jettings, Valves, Cooling, Lubrication, Pumps, Wheels, Clutch, Transmission, Final Drive, Steering, Frames, Tires, Vibration, Ignition, Starting and Lighting Systems, Wires and Accessories, Shop Kinks, Commercial Garage Designs and Equipment, Electrical, Storage Batteries, Cured and Liquid, Motorcycles, Commercial Trucks, Glossary.

FREE Consulting Service!

With each set we give you, absolutely free, a year's Consulting Membership in the American Technical Society. The regular price is \$12.00, but you get it free with this set. Put your perplexing problems up to a staff of experts. Ask them any motor question you wish. The solution of one problem might easily be worth more than you pay for the books. Ask as many questions as you wish for an entire year.

Send the Coupon!

Your name and address on the coupon brings the five books to you, express prepaid, for seven days' free trial. This offer is open to every person within the boundaries of the United States and Canada. Act quick—while offer lasts. Send coupon today—NOW!

Free Book On Signal Engineering

THERE are thousands of miles of railroad that must be equipped with block signal systems. To superintend these installations and to maintain the systems now in use thousands of men are necessary. Golden opportunities are offered. Every ambitious man in America should write for the free book on Signal Engineering. It will be sent to you prepaid—without obligation.

Men Are Needed to Accept High Salaried Positions

When you stop to consider that, at the present time, less than one-fourth of the passenger lines in this country are equipped with automatic block signal systems—and when you read that the day is fast coming when the law will compel railroads to install them, you will realize what remarkable opportunities are offered to ambitious men in the profession of Signal Engineering. The work is big—broad—high salaries are paid. \$250.00 a month is an ordinary salary for a Signal Engineer.

Department of Signaling

Dept. 1194, 1810 Wilson Ave.,
Riverside Station Chicago

TRAFFIC MEN earn \$3,500 to \$10,000 Yearly

TRAFFIC MANAGER

R. R. TRAFFIC MEN

No other field or profession offers such advantages as are open to trained Traffic Men. Railroads, Factories, Jobbers, Commerce Clubs are taking all the trained men they can find. They are paying from \$3,500 to \$10,000 and more yearly for competent men. There are now more than 10,000 Traffic positions open in all parts of the country. We are training men in a short time to fill these positions. Only spare time is needed. The work is easy to understand; you begin to earn more after your first few weeks. The course is thoroughly practical. Anyone who understands common every day language will succeed. Positions are permanent.

Learn from Practical Traffic Men

Our instructors are practical, experienced, successful traffic men. Born in the work for years, and are teaching men successful methods. Students get personal attention of our faculty. One man wrote: "I saved my firm \$4,000 from August 1st to December 1st." It was his first traffic position and he made good. Instructors help graduates for two years after graduation. We have over 100,000 tariffs on file. Rates, routing and classifications can be quoted from any two points in the U. S., Canada and Mexico. This immense tariff file, together with our practical instructors, gives an advantage found in no other school.

Post Graduate Course Free Our Students and Graduates take the pleasure of coming to our School for Post Graduate Work. They may stay as long as they like. They get actual experience in rates, routing, classification and loading. This work is absolutely free. It is not essential, but is very helpful. This pleasure is not found in any other school.

TRAFFIC BUREAU

COMMERCE CLUB TRAFFIC SECY

Why Traffic Men Are Needed

Factories, Auto Manufacturers and Wholesale Houses are expanding territory. Every expansion means new rates, routing, classification or changed packing methods. The Interstate Commerce Commission and the Railroads are constantly changing rates and classifications. It takes a trained Traffic man to handle problems like these. Only men who have been in the Traffic business for years, men who have grown up in this high-salaried business, are competent to train men. There will always be a demand for trained, General Traffic Men.

FREE Our booklets "TRAFFIC," catalog and full information, all **ABSOLUTELY FREE**. Make up your mind now to get started. Get our literature at once.

Traffic Men

Salaries range from \$3,500 to \$10,000 yearly.

Traffic Bureaus

Salaries range from \$4,500 to \$10,000 yearly.

R. R. Traffic Men

Salaries range from \$4,500 to \$10,000 yearly.

Commerce Club Traffic Secretaries

\$2,000, \$3,500, \$4,000, \$4,500, \$10,000 and up.

MEN WITH VISIONS

James J. Hill was a man with a vision. He saw the possibilities of a railroad through the northwest; he accomplished his vision. Cecil Rhodes planned an immense railroad in South Africa. He lived to see his vision become a reality.

Thomas Jefferson saw a vision of the U. S. reaching from ocean to ocean. He accomplished this. Abraham Lincoln saw great visions in the law practice and for hard knocks reached his goal.

The vision of these great men made it possible for them to stand the hard knocks and persevere every obstacle. They were pioneers and it took a lifetime for them to win out. No one could tell them or told them how.

Think of the possibilities for you in the traffic field. Think how quickly you can reach the big salary. Make up your mind to be a traffic man. Get started and don't let anything change your vision. Let our seasoned practical traffic instructors train you for a big traffic position. Let our vision men help you. Graduates of the Interstate Traffic School are competent to handle any traffic position.

INTERSTATE TRAFFIC SCHOOL, 24 Traffic Building, FORT WAYNE, IND., U. S. A.

Earn \$125 to \$250 a Month

President

This twin-six motor is block mounted.

Then there are the Eight and many other motors for my students special training and experience.

These motors are in the practice room. All Types of lighting and self-starting devices—full equipment, so that you learn all easily. Tire vulcanizing, Oxy-Acetylene welding—training and experience in all branches of the automobile business. My students do practical work. They handle welding torches under the guidance of master-welders. Don't bother with any training that gives you only a little—come here and I'll hand you a kit of tools—not printed books.

All types of motors—block mounted. Easy to get around.

Come to the School of Complete Equipment

—and let me train you to earn big money in the Automobile and Tractor Business. The supply of men to fill the many open positions and waiting opportunities is far short of the demand. Now is the time to start. I'll help you—I'll train you **right**. My success in training thousands of ambitious men is known throughout the country. I have been right here in Kansas City for a number of years and I rightly claim more successful graduates than any similar institution in the world. I am always ahead with complete equipment—with plenty of floor space and more expert instructors. My graduates earn from

\$75 to \$350 a Month

YOU CAN DO THE SAME if you have ambition and determination to learn. **Rahe's Original Practical Method of Automobile Training and Experience** is everywhere recognized as the most efficient method of training ever devised. Remember—it's not theory—there are **no books or printed lessons**. My training is unique and distinctive—it's the **actual doing**—getting into overalls and starting at the bottom under the guidance of expert instructors.

Only a Few Weeks Required

That's all—just a few weeks and you will have a thorough understanding of the basic principles of this wonderful business. You will then be ready for a position, paying good money right from the start—with a world of opportunity before you. My original practical method is all simple and easy. You get the full instruction in easy stages and you have the wonderful advantages of complete equipment—Automobiles, Tractors, Welding Plants, Big Drill Presses, Power Lathes, Forges, etc. Two big garages and repair shops. Cars of all kinds for my students' practical use. Every type of motor is represented in my equipment—block mounted so they are easy to get around, easy to take apart. It's the Rahe method—

Practical—Efficient—Complete

87 Complete Welding outfit. Big Demand for Expert Welders.

Subtypes of Tractors, Harrows and Gasoline Engines, Big Drill Presses, Power Lathes, Forges, etc.

Tractor Engineering

I want to enroll the full capacity of my school a month earlier this year, and to all students enrolling now I am giving a free scholarship for complete instruction in **Tractor Engineering, Power Farming, Gas and Stationary Engineering**. The development of the farm tractor and its growing popularity is second only to the automobile itself. Come and see my large tractor practice field and complete tractor and farm equipment. With this added knowledge you can reap new profits in an entirely new field. Remember—it's **FREE** when you enroll for my automobile course.

Get My 80-Page Catalog

Use the coupon below or post card, but send now for my new catalog. Filled with Copper Engravings of men at work in the various departments—views of equipment—three big buildings and big tractor farm. Let me start you. **Let me help you to be the success you can be**—if you have backbone and ambition. Send for the book at once and read letters from men like yourself—who came to me without previous experience and are now earning big money.

Everything About the Shop

In these six volumes, bound in genuine Bagdad leather, limp covers, 5 1/2 x 8 1/2 inches, 2900 pages, 2000 illustrations, is all that experts know about the shop and shop methods. All the latest inventions and methods explained in detail. Tabulated and cross-indexed so that everything is right at your finger tips ready for instant reference.

50 Cents a Week

Yes, this small sum pays for this superb set. For only \$2.00 after seven days' free examination and then \$2.00 a month (plus a week's). We send these books upon your written request and you have 7 full days in which to decide if you want them. This offer is open to every man within the boundaries of the United States and Canada.

Consulting Service Free

With each set is included a free consulting membership (regular value \$12.00) in the American Technical Society for one year. This gives you the right to ask our experts any question pertaining to shop practice for an entire year. There is no limit to this service. Ask us any questions as you like.

Treats These Subjects in Every Detail:

Machining Shop Work — Machine Shop Measurement — Tool Making — Foundry Work — Pattern Making — Machine Drawing — etc.

Send Coupon!

Just send the coupon — no money — and we will send, prepaid, to your own home, a complete set of **Modern Shop Practice**. Look it over for seven full days. Use it as if it were your own. Then, if you decide that you do not need it, return it at our expense. If you want to keep it, send us \$2 and \$2 a month thereafter until a total price of \$17.80 has been paid. Send coupon.

Dr. Charles P. Steinmetz says—
"There is an enormous field for the electrical worker," but the big opportunities are for the expert, not for the dabbler in electricity.

The Only Way to Learn Electricity

You cannot become an expert in any field by simply reading a book. You must "learn by doing." That's the way electricity is taught at the New York Electrical School. Our concentrated-work with actual apparatus under actual conditions will put you ahead of men with from 5 to 10 years' experience in the electrical field. 4000 of our students have gone forth into electrical success.

Learn by Doing

This method makes you an expert, able to command a high salary. All instruction is individual. You go ahead as fast as you can learn. Good students complete the course in seven months. Send today for FREE 64 page book. Tear out this advertisement and mail it with your name and address.

NEW YORK ELECTRICAL SCHOOL
44 West 17th St. NEW YORK, N. Y.

A High School Course In Two Years

Learn in your own home. Herein a thorough, complete, and simplified high school course that you can finish in two years. Meets all college entrance requirements. Prepared by leading members of the faculties of universities and academies.

Write for booklet. Send your name and address for our booklet and full particulars. No obligations whatever. Write today—now.
American School of Correspondence, Dept. P1194, Chicago, U. S. A.

Do You Like to Draw? Cartoonists Are Well Paid

We will not give you any grand prize if you answer this ad. Nor will we claim to make you rich in a week. But if you are anxious to develop your talent with a successful cartoonist, so you can make money, send a copy of this picture, with \$2 in stamps for portion of cartoons and sample lesson plan, and let us explain.

WISCONSIN SCHOOL OF ENGRAVING, 5144 Reg., MILWAUKEE, WIS.

Ambition

-take a Lesson from Life

You men of ambition—you who are taking thought of the future and have considered taking up law either as a profession or as a means of attaining greater success in the business world—you do not need to be reminded that law always has been, and is today, the foremost profession. That law has raised more men to positions of power and eminence than any other calling; that today law offers more and broader avenues for a successful career than ever; that law-yers' yearly incomes of from \$3,000 to \$10,000 are by no means uncommon. You know these things from daily observation. You feel that you could make your influence felt in the legal profession, in business, in politics, if you had but the necessary legal education. And so you could.

LAW

At \$3,000 to \$10,000 a Year Is Your Opportunity

Right now you may be debating the question as to where you can best learn law. Let us help you answer that question. Let us tell you how, through our simplified Home Study Course, we have revolutionized the study of law. Let us explain fully, just how easily this great law course can be mastered right in your own home, during spare time; how we have taken the hard, grinding work out of the study of law and have made it as fascinating and absorbing as a work of fiction.

There are many things about this really remarkable home study law course which you should know. For instance—

Do You Realize—

That the LaSalle Home Study Text and Course are prepared by some of the ablest law professors, jurists and legal experts in the country? The list includes such men as James Parker Hall, Dean of University of Chicago Law School; James DeWitt Andrews, former member faculty Northwestern University, and other famous legal authorities, and professors in such colleges as Harvard, Lehigh, Stanford, University of California, Michigan, Wisconsin, Etc.

That it is the only home study law course in existence that is of university grade and that gives you the same kind of legal instruction and training—the same kind of individual lessons, class talks, quizzes and examinations—that you would receive at the most famous resident law schools in America?

That, under the laws of the State of Illinois, we are authorized to confer the degree of LL. B. on our graduates?

That LaSalle graduates taking bar examinations in states where the requirements are most rigid, and in competition with graduates of the best known resident law schools of the country, are among those who have passed with highest honors?

That, should a student fail to pass the bar examination in any state, we guarantee to give him additional instruction and coach him free of charge until he does pass?

That we further give a legal binding guarantee to refund the entire amount of tuition paid, if the student is dissatisfied with course?

That there are, in practically every state in the Union, LaSalle Law graduates who are today highly successful practicing lawyers?

LaSALLE EXTENSION UNIVERSITY, Dept. 464-F Chicago, Ill.

The World's Greatest Extension University

That, as a part of the course, and immediately upon enrolling, we furnish a magnificent law library consisting of 14 massive volumes bound in 2 sheep—the preparation of which cost us over \$50,000?

Do you grasp the full significance of what it means to you to be able to obtain this thorough, practical course of university grade on terms so easy that you would scarcely miss the money? And the total cost is so surprisingly small you will wonder how it is possible.

FREE Complete Course in Public Speaking

Every lawyer—every successful man—should be a forceful speaker. Mail coupon at once for full particulars of how, by your acting promptly, we will give you, absolutely free, a complete course in public speaking that will quickly train you in the fine art of persuasive speech. Course prepared by Frederick B. Robinson, A. B., A. M., Ph. D., Professor Public Speaking at College of City of New York.

Owe It To Yourself—To Your Future—To Get All the Facts

They are interestingly told in our remarkable book which is yours, free for the mailing of the coupon. Mail the coupon. It imposes not the slightest obligation upon you—and the book, together with our book, "Evidence" and letters from hundreds of successful graduates which we will send you, also free—will give you a clearer insight of the wonderful work of this great institution and of the high educational ideals it has set and is maintaining.

ACT! Take your first step toward greater success today. Mail coupon.

MAIL NOW!

Do You Like to Draw?

Whether your ambition is to become a second Bud Fisher or whether you draw merely for your own amusement—you will find lots of inspiration in

CARTOONS MAGAZINE

It contains each month the cream of caricature, and cartoon art the world over. The foremost American cartoonists are represented, together with the most famous of the Parisian artists and cartoonists of Berlin, London, Petrograd, and Rome.

Either as an art student or a student of current events you will enjoy seeing how cartoonists are portraying world history in the making. "Cartoons" is a monthly review, but doesn't take itself too seriously.

There are pictures by Ethel Plummer, stories by Helena Smith-Dayton, comics by King, Webster, and others, and Parisian sketches by the artists of Fantasio and La Beionnette. It also tells what the big fellows in the cartoon world are doing.

A two-bit piece together with the following blank filled out, will bring you post haste a sample copy.

*Nature's Comedy,
Love and Tragedy
laid before you in
thrilling form—*

THE quarrels among the trees, love affairs of the birds, the intrigues of the flowers, the warring of the wild beasts—all this is thrillingly told in the greatest Nature set ever written.

The New Nature Library

Lays before you all the secrets of forest, field and stream. Now yours on special terms if you act quickly. Gives a new delight to all outdoors. Brings nature into your home. Children love the fascinating stories and many pictures, and it will give you the most wonderful romances you ever read.

Greatest experts in the country have contributed to these books—Dr. David Starr Jordan of Leland Stanford University, Dr. Howard of U.S. Department of Agriculture, Dr. Evermann of U. S. Fish Commission, Dr. Holland of Carnegie Museum, and Neltje Blanchan.

Size of volumes, 7 3/4 inches x 9 3/4 inches. Hundreds of illustrations. Thousands of pages of fascinating text matter. Bound in durable green cloth, or a flexible black leather. Gilt tops, silk headbands, decorated end papers. Order while the edition lasts.

Splendid Pictures!

A vast collection of wonderful color plates made direct from Nature. Shows you just how the birds, animals, fish, trees and flowers look in their native haunts.

Special Offer The edition is limited. It will soon run out. The next edition will undoubtedly cost more. Do not postpone reading.

Send This Coupon

We ship the books at once. You pay only \$1.00 with the order and \$3.00 a month until \$34.50 is paid if you choose the cloth, or \$4.00 a month until \$44.50 is paid if you prefer the leather. If you are not perfectly satisfied with the books we will refund your dollar—but you must act at once. Remember, the edition is small. Act now.

YOUR OPPORTUNITY

- TO LEARN THE AUTOMOBILE BUSINESS
- TO SEE AND KNOW NEW YORK CITY
- TO MAKE FROM \$75 TO \$300 A MONTH
- TO GET INTO A BUSINESS FOR YOURSELF

Get out of that rut into a profitable business. The automobile field offers more opportunities for the **TRAINED MAN** than any industry today—and they are getting bigger every year. **THINK—SERIOUSLY**—**NOW**—if this isn't just the opportunity you've been seeking. Automobile men are combing the country for trained men for every branch of this mammoth business.

—Learn in New York City—

Visit New York City—see the sky scrapers—the gigantic ocean liners—old Broadway—the Statue of Liberty—the world famous sky line—and the million and one things you have heard people talk about. Right now **YOU ARE** planning to go somewhere to train yourself for a well paying position or a business of your own. This **IS** your opportunity to become thoroughly acquainted with New York and at the same time **SETTLE THE QUESTION OF YOUR FUTURE PAY ENVELOPE.**

Make \$75 to \$300 a Month

This old world won't give you any more than you will walk up and take, but when you step up and say, "I'm after mine," and put "pep" into your action, the world hands it right over. A thorough training in the automobile business immediately puts more money in your pay envelope—and the more you know the bigger the pay envelope.

Our Course—Our Motto

Think of it—a full five weeks' practical course under the most competent instructors available, in the most complete and up-to-date school in the country—right off Broadway in the heart of New York City—Day and Night classes. We have lines of desirable places, conveniently located to school, for you to stay while learning. Our dealings with our students have been our mainstay and built for us the big school we now have. Everybody gets a square deal and thorough personal instruction.

Be Independent—

Start a Business of Your Own

Once you are trained the **Stewart** way you need not work for the other fellow—you have sufficient knowledge to start a business yourself—in every city there is a great opportunity for the live fellow who will get out and hustle—and there's big money in it.

Don't Delay—Act Quickly—

Write Today

Write at once for our catalog giving detailed information about our course—how we help our students. Start any time, but **don't wait** a minute to ask for our catalog which contains just the proposition you have been seeking.

REACH OUT

Reach Out for Big Salary Become a **TRAFFIC MANAGER** —and a Member of This Association

Digest of Traffic

The Association has compiled the only digest of traffic ever produced. This work required the co-operation of over three hundred traffic experts—took five years and over \$100,000 has been expended. This great reference and working library is for the exclusive use of its members.

The great European war has suspended the commerce of several of the great nations. America has profited thereby immensely. The U. S. has won the trade thus lost by the European nations and is now supplying the greater part of the world with food, supplies and manufactured articles. It is also furnishing the warring nations with vast quantities of munitions. **MEN ARE REQUIRED** who **KNOW** how to **SHIP** goods.

Thousands of Positions Now Waiting

Never before have there been such a variety and number of splendid opportunities for young, and middle aged, men. This is especially true in manufacturing and in **SHIPPING**. Live men who **START NOW** are assured of **GOOD** salary.

SALARY

The salary of trained traffic men is from \$2,500 to \$10,000 a year. The work is always interesting because it is not routine work. The traffic man is an executive—not a subordinate.

Gorged — Shipments Tied Up

The shipments of food, supplies, manufactured articles, munitions of war, etc., for European and other foreign delivery, are so **LARGE** that the shipping departments of thousands of factories—railroads—warehouses—seaboard wharves—are **GORGED**. In addition our interstate shipping is tied up. Shippers are crying for help.

Trained Men, Only

These thousands of positions are for **TRAINED** men **ONLY**—men who understand **TRAFFIC**—shipping. Men are wanted who are fully informed—who know how to get **QUICK ACTION**—who know how to **SAVE** freight money.

We Will Train — YOU

Our Association will instruct you—tell you **JUST WHAT** is required—and **JUST HOW** to do it. We give you individual "coaching" and **TRAIN YOU** by our "experience" method.

Don't Delay — Apply NOW

Now is the time—today. It is not difficult to make good—if you don't it will be **YOUR OWN** fault. Send the **COUPON** now for complete instructions by **RETURN MAIL**.

Great Opportunities in Sanitary Engineering

SANITARY ENGINEERING offers a remarkable opportunity for the trained man. Now by spending a few of your idle hours getting a technical and business training, you can put yourself high up in one of the most profitable businesses of the day. You can get this training right in your own home. Here is a course of training, investigated and endorsed by sanitary societies all over America, that will prepare you for the position of

**Sanitary Engineer
Drafting and Estimating Manager
Heating and Ventilating Engineer
Plumbing or Sanitary Inspector**

One Billion Dollars in New Buildings Last Year

In only 100 cities over one billion dollars was spent for new buildings last year. The experts in heating and sanitation received approximately 15% of this vast sum. Just think of what that means — think of the opportunities awaiting men who have the technical training that enables them to reach out and share this vast expenditure.

Chas. Woodward, of Wyandotte, Mich.

Mr. Woodward answered the advertisement of Bush Motor Co., Sept. 20, 1916. He subscribed for the Course in Driving, Repairing, and Selling Automobiles, Sept. 29th, 1916. He completed this course on October 16, and received his Bush Car on November 10, 1916. Write Mr. Woodward and see what he has to say.

Also write Harvey C. Lyon, Pueblo, Colo.; John I. Briggs, Rochester, Mich.; Henry U. Teel, Rexford, Kans.; Henry H. Harris, Glens Falls, N. Y.; J. B. Holt, Sibley, Louisiana; Christner & Guest, McKeesport, Pa., and hundreds more if you want them.

→ BUSH CAR ←

A 5-Passenger Touring Car With Delco Ignition — Electric Lighting and Starting

The car of Comfort, Convenience, Speed and Power. Has 114-inch wheel base, Two Unit Starting and Lighting, Delco Ignition, Unit Power Plant, Full Floating Rear Axle, Full Streamline 5-Passenger Touring Body, One-Man Top, Rain Vision, Two-Piece Windshield, 32x3½ Tires, Stewart-Warner Vacuum Feed, Stewart-Warner Speedometer, Complete Dash Equipment, including Dash Light, Gas Tank holds 15 gallons, Lycoming

Motor, same motor used in cars selling up to \$900.00 and more—develops at 2500 revolutions, 34.7 H. P., Guaranteed Hill Climber.

The Bush Car was recently put under Instrument Tests by American Society of Mechanical Engineers, at Pueblo, Colorado, and Lookout Mountain, Colorado, which proves the Bush Car to be all and more in mechanical reliability and performance than is claimed by its builders.

AGENTS ARE MAKING MONEY

All agents of cars are making money. Everybody has money and everybody wants cars. There have been only three and one-quarter million cars built, including Fords, since the start of the automobile industry. New York State has a population of eight millions. Think this over. Remember that there are one hundred million people in the United States today—they would all like to ride in automobiles. Over one billion dollars will be paid for automobiles, supplies, repairs, and men to drive them in the U. S. this year. No wonder agents for good cars are making fortunes. How would you like to have the agency for the Bush Car?

Great Bush Auto Offer

You can get this magnificent Bush Car and the agency for your Territory if you act quickly. Ride in a Bush Car—pay for it out of your commissions. Qualify to make \$5,000 to \$5,000 a year and up in the Automobile Business. Coupon brings Big Catalog and full details of this Great Auto Offer to readers of Popular Mechanics. Write quick before your territory is taken. Use the coupon or address me like this:

Publisher's Announcement

The date on which Popular Mechanics Magazine is distributed simultaneously on news stands in all parts of the country is the 20th of each month.

The traffic congestion on all railroads is simply unprecedented, and while the Publisher, the distributing News Companies and Railroad Officials are using every possible effort and expending no expense, it is impossible to maintain our schedule of the 20th at all points every month. It is a condition which simply cannot be entirely avoided.

At each point as the magazine is a few days late, we ask the patience and forbearance of our readers.

Newsdealers are requested not to return unsold copies until the succeeding issue is received, and are reminded of our policy which puts no time limit whatever on returns.

POPULAR MECHANICS MAGAZINE,
H. H. WINDSOR, President.

Chicago, March 3rd, 1917.

Free To All Ambitious Men

Ten Years' Promotion In One

There are hundreds of thousands of men with clear brains, good health and plenty of ambition who ought to succeed, but who are regularly "fired", "kicked out" or "held down". WHY? Read the answer in this book "Ten Years' Promotion In One"—a book that will open your eyes to some plain, common-sense success facts.

If a man feels that the chances are all against him; that it requires "pull" or "luck" or a combination of both to land the job higher up or to increase his income, this helpful, inspiring book will convince him otherwise. A prominent Chicago business man

recently said, "It would pay every ambitious person to read this book, even if he had to pay \$5 to get a copy." Let us send it to you FREE, with literature explaining how thousands of men have found the short cut to promotion through the training offered by

La Salle Extension University

"The World's Greatest Extension University"

More than 125,000 men of all ranks and positions, from office clerks to corporation officials, have benefited from LaSalle training and service. Over 20,000 new students annually now avail themselves of the home-study courses offered in the various departments of the University.

The complete LaSalle organization and its associations consist of more than 800 people. It is backed by capital of \$1,000,000, with assets in excess of \$2,000,000. It has a staff of more than 300 prominent business experts, professional men, text and special lecture writers, contributors, instructors and assistants, including recognized authorities in all departments. Its students and graduates can be found throughout the entire English-speaking world.

Within the past two years the buying power of the American dollar has shrunk from 30 to 60 per cent. If your income is not more today than it was a year or two ago, your earning power too, has shrunk in proportion.

Today, big incomes are virtually begging for men to come and earn them. A recent editorial in the Saturday Evening Post on "Help Wanted at \$500 a Year" referred to a business man who complained that "At \$10 a week he had three applications for every job; at \$100 a week, two jobs for every applicant." A want ad for a \$10 a week job in Chicago brought 171 written applicants. A \$5000 a year position advertised by the same concern at the same time in the same paper did not bring a single applicant—NOT ONE.

Big business is in need of capable executives, auditors, comptrollers, business and office managers, traffic managers, legally-trained men, bank officials, certified public accountants, cost accountants, sales managers, etc. Any one of these positions is within the reach of the wide-awake man who has intelligence and common-sense and will apply himself. No man need be content to do under-paid, disagreeable work, with the abundant opportunity trained men now have to pick positions with worth-while incomes.

Indicate in coupon the position for which you wish to qualify. We will send you a complete descriptive catalog, explaining fully how our training places the position of your choice within your grasp. Our plan enables you to use your spare time. You can carry on the work in your home or office, by mail, without interference with your present duties and you can pay for the course a little each month if you wish.

Your chance to get ahead is here before you—right now. Mark with an X the course in which you are interested. Send for your copy of "Ten Years' Promotion In One" today. You will never part with it except to loan it to a friend.

---FREE BOOK COUPON---MAIL IT TODAY---

30 DAY COURSE IN TIRE REPAIRING **FREE**

Complete Tire Repair Outfit
Less Than \$250.00

With this outfit and our course of free instruction, you can start up a good business.

Learn to Repair Tires

Bigger opportunities than in any other branch of the Auto business. A broad claim, but easy to prove. Only stop and think!—you know it's true. Listen! Not one single Auto factory can build cars fast enough. Everybody is car crazy, and the craze is growing. 2,000,000 autos now in use. Four tires to each car. That means 8,000,000 tires to repair. Just think of it—8,000,000 tires! Each car wears out its cost in tires alone. Punctures and blowouts are common. Vulcanizing, patching, retreading, etc., must be done. Retreading alone—the new and better process—brings big money.

Earn \$3000 to \$8000 a Year

Begin now. In almost every city, town, village, and cross corners, there is a fine chance to start. We know the places and put you next. Just a little money starts you in a business of your own. We guarantee to make an expert of you in 30 days free of charge. Write today for free catalog, or why not take a run over to Detroit and investigate personally? Don't let the chance slip by. Investigate now.

Reliable Tire Repair School

401 Reliable Bldg., DETROIT, MICH.

These Are The Hours That Count

MOST of your time is mortgaged to work, meals and sleep. But the hours after supper are *yours*, and your whole future depends on how you spend them. You can fritter them away on profitless pleasure, or you can make those hours bring you position, money, power, *real success in life*.

Thousands of splendid, good-paying positions are waiting in every field of work for men *trained to fill them*. There's a big job waiting for *you*—in your present work, or any line you choose. Get ready for it! You can do it without losing a minute from work, or a wink of sleep, without hurrying a single meal, and with plenty of time left for recreation. You can do it in one hour after supper each night, right at home, through the International Correspondence Schools.

Yes—You Can Win Success in an Hour a Day

Hundreds of thousands have proved it. The designer of the Packard "Twin-Six," and hundreds of other Engineers climbed to success through I. C. S. help. The builder of the great Equitable Building, and hundreds of Architects and Contractors won their way to the top through I. C. S. spare-time study. Many of this country's foremost Advertising and Sales Managers prepared for their present positions in spare hours under I. C. S. instruction.

For 25 years men in offices, stores, shops, factories, mines, railroads—in every line of technical and commercial work—have been winning promotion and increased salaries through the I. C. S. Over 130,000 men are getting ready *right now* in the I. C. S. way for the bigger jobs ahead.

Your Chance Is Here!

No matter where you live, the I. C. S. will come to *you*. No matter what your handicaps, or how small your means, we have a plan to meet your circumstances. No matter how limited your previous education, the simply written, wonderfully illustrated I. C. S. textbooks make it easy to learn. No matter what career you may choose, some one of the 280 I. C. S. Courses will surely suit your needs.

Make Your Start Now!

When everything has been made easy for you—when one hour a day spent with the I. C. S. in the quiet of your own home will bring you a bigger income, more comforts, more pleasures, all that success means—can you afford to let another single priceless hour of spare time go to waste? Make your start right now! This is all we ask: Without cost, without obligating yourself in any way, put it up to us to prove how we can help you. Just mark and mail this coupon.

INTERNATIONAL CORRESPONDENCE SCHOOLS

Home Builder's Guide

By WM. ARTHUR

EVERY one who is interested in building a house, either for a home or commercially, should read this new book, for it aims to give those who are not professional builders or contractors a thorough understanding of the value of good construction. It is written in Mr. Arthur's simple and direct style, so that the veriest novice may understand the why and wherefore of every operation.

Starting with the site, the author has given pointers from his experience on the proper selection of a plot from the standpoint of health and economy. He then explains the planning of a house so that it will have the best light and be conveniently arranged. All types of construction are then taken up so that the reader may get an unbiased professional opinion of the best for many purposes.

CONTENTS

The "Lay" of the Land; The Planning of the Home; The Big Four; A Firm Foundation; The Framework; Covering and Adorning the Frame; The Bungalow; Brickwork; Cement Stone—and More Stone; Lath and Plaster; Sheet Metal Work; The Interior Finish; Plumbing and Gasfitting; Ventilation; Heating and Lighting; Painting; Finish Hardware; An Analysis of an Ideal Plan; Tornado Construction; Wind Bracing.

186 Pages, 5x8 inches. 40 Figures, Cloth
Price \$1.10 Postpaid

Music Lessons Sent FREE!

You, too, can now quickly and easily satisfy your musical ambitions. Learn to sing or to play your favorite instrument, whether for pleasure, social prestige or to teach music, by our wonderful home study lessons under great American and European teachers. These lessons are a marvel of simplicity and completeness, endorsed by Paderewski and other great authorities. Right in your own home you can have the instruction of these masters (see names below). This is made possible by the remarkable Siegel-Myers System—the only University Extension Conservatory of Music in existence. Send for full information and get 6 free lessons while the offer holds good. Read our offer—then write us a letter and get all this.

Any Instrument or Voice

The Siegel-Myers System will be a revelation to you. You will wonder how you ever had the patience to study in the slow, tedious, ordinary way when you find how easily you learn by this method. Complete Courses in PIANO (students' or teachers' courses) by the great Wm. H. Sherwood; HARMONY by Dr. Protheroe and Rosenbecker; VOICE COURSE (with aid of phonograph) by Giesington; PUBLIC SCHOOL MUSIC by Frances E. Clark; VIOLIN, CORNET, MANDOLIN, GUITAR (including Hawaiian system of play-

ing), BANJO, REED ORGAN, CHORAL CONDUCTING, HISTORY OF MUSIC and ADVANCED COMPOSITION, by equally eminent and accomplished teachers.

No matter where or with whom you have studied or whether you have studied at all—even if you have tried unsuccessfully—if you love music and want to succeed as a musician or as a teacher of music, write. We have some very interesting information for you. You should send for it now—at once—while this special offer lasts.

This Offer Is FREE—Write Today!

We do not ask you to pay one cent for the six lessons. This is our way of proving to you what splendid instruction we give. SEEING IS BELIEVING. Yes, you get the whole six lessons free. Isn't it worth a few minutes time to write for them? To send us a letter accepting this offer may be the turning point in your musical career.

Tell us frankly just what you have done in music, how long you have studied, or whether you have ever studied at all. Also tell us your age and just what your musical ambitions are. You will find our faculty ready to give you sug-

gestions toward making a career, or, anyway, for getting the most out of your natural ability for singing or playing.

This splendid system of ours has enabled thousands to see their hopes realized. You too can do more with music if you have scientific, practical instruction. Write us fully. Then we will tell you just what we can do for you. We will gladly explain the famous Siegel-Myers System.

A few Special Introductory Scholarships are now being awarded by our faculty. Full particulars about this will be sent with the free lessons. Write today.

NOW YOU NEED A GOOD ATLAS

Never before in the World's History has an atlas been so constantly necessary to an intelligent understanding of the World's News.

Size 9 1/4 x 6 3/4 x 1 1/4 Inches

Special New Maps Show the Several War Zones
Get your atlas now. Use it during the great war when you need it most and rest assured it will be up-to-date after the war is over. Price \$2.50 Postpaid.

Return Privilege Any purchaser who is not more than satisfied with this atlas may return same and have his money promptly refunded.

POPULAR MECHANICS BOOK DEPT.

Here is the IDEAL ATLAS

Hammond's Comprehensive Atlas is a compact octavo volume, bound in flexible leather. It solves the problem of

Large Scale Maps in a Book of Handy Size

Contains 512 pages, 256 pages of large scale maps of all States, Canadian Provinces, Countries of the World, etc., also 256 pages of text, index, compilations, gazetteer, statistics of population, etc.

Self-Revising After the War

Each copy contains a certificate entitling the purchaser to a supplement of maps showing the new boundaries after the war is over, making this atlas self-revising.

JUST OUT

Modern Starting, Lighting and Ignition Systems

By VICTOR W. PAGE, M. E.

Nearly 400 (5 1/4 x 8) Pages
250 Engravings
Folding Plates
Price \$1.50 Postpaid

Indispensable to all needing a practical working knowledge of automobile electricity. A self-educator on electrical systems without an equal.

A comprehensive review of Modern Starting and Ignition System Practice. Includes a complete exposition of Storage Battery Construction, Care and Repair. Explains all types of starting motors—Generators—Magneto and all ignition or lighting system units. Considers the systems of cars already in use as well as those that are to come in 1918. All the leading systems of Starting, Lighting and Ignition have been described and illustrated with the co-operation of the experts employed by the manufacturers. Wiring diagrams are shown in both technical and non-technical forms.

Complete Description and Synopsis of Contents will be sent upon request.

JUST OUT OXY-ACETYLENE WELDING AND CUTTING

ELECTRIC AND THERMIT WELDING

By H. P. MANLY

Chief Engineer

American Bureau of Engineering

215 pages, Fully Illustrated.
Cloth, Price \$1.00; Leather, stamped in gold, red edges, Price \$1.50 (each postpaid).

The extensive use of the oxy-acetylene flame in welding and cutting has created an active demand for a practical book explaining this process. In addition to the oxy-acetylene welding are included electric and thermit welding, also a chapter on hand forging and welding. In order to make a complete book on welding, the following subjects have been included: annealing, tempering, hardening, heat treatment, and the restoration of steel.

Much practical information is given on the uses and characteristics of the various metals. Thus, in this book the manufacturer and the workman will find all necessary information and data required in handling any kind of welding.

Sent postpaid upon receipt of price by

\$1,000,000,000 corporation

selects lawyer as president

Law training wins high place in big business

The biggest corporation in the world wanted a new president. After long study and deliberation the directors chose not a steel expert, nor a banker, nor a financier. They selected a lawyer.

His law training qualified him for this high industrial position. His legal mind grasped facts quickly, analyzed them logically, and acted on them with good judgment. His knowledge of the law enabled him to cope with big business problems, for law underlies all business.

The wisdom of the directors' choice has been confirmed by the prosperity and growth of the corporation under the lawyer's guidance. Not only is it the biggest corporation in the world, but it is one of the best managed as well.

A growing demand for law trained men

Every day more and more big businesses are realizing the importance of having law trained men at their head.

James Stillman, Chairman of the Board of Directors of the National City Bank of New York, predicts that "in the next ten years every executive in a bank, and most business executives will have to have a law training."

The demand for law trained men grows daily stronger

Law is the most powerful weapon in the hands of the business man. It enables him to protect his business interests and to analyze big and intricate problems.

To the man of real ambition and determination it is never too late to begin the study of law. Many men, well on in years, have left their business affairs to study law.

We bring the law to you

You, however, do not have to give up your business to study law. You can master our Course in your spare time—in the odds and ends of your time, which added together make for an education. You do not

lose a day's work nor a dollar of income from your regular employment.

The Modern American Law Course and Service of the Blackstone Institute has been carefully prepared by eighty eminent legal authorities. It is written in simple, understandable language. This Course gives you a thorough, practical grounding in the fundamental principles of law, under the personal guidance of experienced and able lawyers and law trained business men.

The Blackstone Institute with its affiliations is the oldest and leading non-resident law school in America.

Among the 30,000 men and women who have been trained in law by the Blackstone Institute are members of Congress, a Governor of a State, City, County and State officials, judges, lawyers and thousands of successful business men.

Today our country is facing a crisis which will demand big leaders. As in all critical periods of our nation's development, these leaders will be chosen from the group of broad-gauged thinkers—the law trained men. They will bear the big responsibilities and reap the big rewards.

"The Law Trained Man"

Our new 168-page booklet, "The Law Trained Man," has a vital message for every ambitious man. It will be sent you free. It tells you how a law training will help you to become more successful in business or in public life. Send for your copy today. Simply mail the coupon below with your name and address plainly written or typed. The booklet will be sent by return post.

You Can Take Hills on High Without A Knock

If you will keep your motor free from carbon. That knocking in your engine—the difficulty you have climbing hills—poor pick-up—lack of power—noisy motor—pre-ignition—in fact 80% of engine trouble is caused by carbon. Clean it out with

JOHNSON'S CARBON REMOVER

and your engine will run like it did the first 500 miles—quietly and full of "pep". And your gasoline consumption will drop from 12% to 25%.

You Can Do It Yourself

For 25c—five minutes time—and with no labor you, yourself, can remove all carbon deposits. Simply pour an ounce of Johnson's Guaranteed Carbon Remover into each cylinder—allow it to remain from two to twelve hours and then drive your car 10 or 15 miles. You will be surprised at the wonderful improvement.

Use It Every 1,000 Miles

If you will use Johnson's Carbon Remover at regular intervals giving carbon no chance to accumulate, you will automatically eliminate most valve trouble and your engine will always be at its highest efficiency.

If your dealer cannot supply you with Johnson's Carbon Remover use attached coupon

Automatic Burglar Alarm Phones for Help

HEREAFTER armed robbers that enter a bank and "cover" the cashiers with revolvers, preparatory to gathering up the money, may find that they are not as secure from attack as

the submissive men in front of them would indicate, for the bank may be protected with a recently devised secret signal system that automatically telephones for help in such an emergency. To operate this alarm one has only to press a hidden electric button with his foot or knee—an act that would be unnoticed by the plunderers. All the apparatus, save the button, is located in another room, or in a cabinet, out of hearing of the bandits. Pressing the button causes a lifting device to raise the receiver hook of a telephone, by means of a cord, thus making connection with central. Simultaneously, a small-size phono-

graph, situated in front of the telephone transmitter, begins to operate, repeating again and again some such message as this: "Help! Robbers! Send police to Third National Bank!" The tele-

phone girl, on hearing this appeal, will immediately notify the police. An obvious advantage of this system is that the robbers are wholly unaware that any alarm has been turned in and so their capture is much more probable. Another type of this protective device is provided with a buzzer, in the place of a phonograph, which sounds into the telephone. The apparatus can be connected so that if a bank is entered after closing hours, the signal will operate without

A Burglar Alarm That Talks! The Button near the Cashier's Knee Enables Him Secretly to Set the Phonographic Alarm to Operating in an Adjoining Room

the pressing of any button. A similar mechanism has been devised which automatically notifies central in case of fire in a building.

CONVENIENT HAIR DRIER

3574 FOR WOMEN'S USE

Women often experience difficulty in drying their hair after washing it, especially in the winter time, when the

This New and Convenient Hair-Drying Device, Invented by a Woman, Seems to Solve One of Woman's Minor Problems, Especially in Winter

sunny back porch and other summer facilities are not available. This difficulty is overcome by the recent invention of a Chicago woman. This consists of a tubular elbow of sheet metal, resembling stovepipe, which can be placed on the top of any range, over a lighted burner, and will direct heat as desired from the burner to the loose hair of a person seated near the range. The elbow forms a right angle, with one side longer than the other, to suit persons of different heights. It has a flange at each end, for fastening it to the range and directing the heat, also a convenient handle.

3600

(2.) COLD WEATHER BRINGS BIG PROBLEMS TO RAILROADS

Something of the magnitude of the problems that arise in railroad operation because of low winter temperatures is revealed in a bulletin issued by the New York Central Lines to its chief engineers, superintendents, etc. The pamphlet shows that the temperatures and precipitation for each month in the various important stations on its lines are carefully tabulated. A scien-

tific study of these records, covering several years, enables the road to issue general forecasts which are a material aid in preparing the track and the equipment for approaching cold weather. The bulletin referred to shows that the abnormally cold winter of 1911-12 caused the greatest number of broken rails in the history of the transportation company and also that an unusual number of wheels gave out. While such extreme cold does not occur frequently, it was deemed advisable to make improvements so that when the severe test does come, it could be met without serious interruption of traffic. Consequently the New York Central Lines laid no less than 900,000 tons of basic open-hearth steel rails, in the place of those among which were so many defectives, and a vast number of old wheels were replaced by solid steel wheels.

RAPID TRANSIT IN MID-AIR

5411

By L. E. MURPHY

By J. E. MURPHY
409 - Box 617 Ingersoll Bldg. Ill.
Carmichael St., Los Angeles

THAT aerial rapid transit connecting the roofs of the skyscrapers in cities like Chicago and New York will be the next transportation problem to demand solution was freely predicted at a recent convention of owners and managers representing the bulk of the big building interests of the United States. Congestion on the streets and on the elevated and surface lines, while important in itself, is not the only consideration leading to this conclusion. Time and convenience are the essential things. What is needed is a system of transportation that will make it unnecessary for a business man to take an elevator at an upper floor of a skyscraper, descend to ground level, and, after encountering the crowds on the streets, take an elevator in another skyscraper to reach perhaps the same level that he started from.

Plans for connecting adjacent sky-

scrapers by means of aerial tramcars running on cables and operated by haulage cables, such as are now in use for reaching several peaks of the Alps, have already been definitely proposed. The requirements of city transportation, however, make such a system wholly inadequate. The only plan that will prove satisfactory is one that

provides a complete and dependable aerial rapid-transit system serving the entire skyscraper district. In Chicago, for example, if it is to be a practical success, such a system must virtually duplicate the surface lines of the loop district, in addition to providing a number of diagonal lines for giving quick access to the railway stations.

Novel as this proposition may seem, it is simply a problem in finance and engineering design. There is little doubt that a satisfactory solution of the engineering problem can be found if certain restrictions and requirements are observed. Cars suspended from sagging cables, like those of the Alps, would be clearly out of the question, for where there is a sag in the cable there is a sharp summit to be passed at each support. To make fast running safe, or even possible, it will be necessary to provide a supporting structure so rigid that there will be no appreciable sag under the weight of a loaded car. On the other hand, any type of trussed bridge construction such as is used for railways will impose too great a load on the buildings, and it is the buildings themselves that must furnish the support for the aerial structure. The same consideration evidently makes it necessary to suspend the cars from the running rails, as any plan for operating the cars above the rails will require a heavy floor system made of steel girders and floor beams. In addition to these requirements, the cars must be self-propelled, just as are surface-line cars, and must operate on double-track lines.

While it is impossible to say in advance of actual design just what the form of the aerial structure will be, there is at least one construction that meets all these requirements. This is a simplified suspension-bridge span. With this type of construction all the members of the span will be in tension and the span need have only a fraction of the weight that is necessary when compression members are used. A 2-in. cable made of the best steel, for example, will resist a pull of more

than a hundred tons, but the same cable placed under compression will buckle with the application of a few hundred pounds. The spans for each track might be made either single or double, as either construction would furnish satisfactory support.

Assuming that the single span, because of its simplicity, is the one to be adopted, the next question would be that of attaching the running rails. This could be done by means of brackets having roughly the form of an inverted "T" and suspended from the lower chord of the span, one rail being supported on each of the projecting arms of this bracket. Since the brackets would be located between the rails, an individual axle, acting as a revolving cantilever beam, would be required for each of the wheels. Here, again, the problem would simply be one of engineering design. A long bearing would be required and it would be necessary to make the axles of somewhat greater diameter than if each pair of wheels were mounted in the usual way on a single axle. Each axle would be mounted in a bracket extending upward from the framing of the car, and within this bracket would be housed the motor for propelling the wheel. Arranging the power or "third" rail is the easiest feature of the construction, as this could be attached to the lower side of the inverted "T" bracket, in convenient position for the contact shoe.

Steel towers springing from the roofs of the buildings would furnish support for the aerial spans. These towers might be rectangular in section to a point well above the running rails, and above this level would probably taper practically to a point. The cars would pass through openings in the towers.

Under the building ordinance of Chicago the height limit is now 200 ft. Prior to 1911 the limit was 260 ft., and a great many of the buildings of the loop district are built to this level. Grades might be put in in places, but the aerial lines would as a rule be built to correspond to the high level. The difference of 60 ft. would therefore be

the determining factor in the height of most of the towers and stations erected on the lower buildings. The station could be installed directly on the roof of a high building, and one or more of the elevators already in service in the building could be arranged to run to a cabin on the roof. With the lower buildings it would be necessary to support the station platforms on steel trestles, with elevators for reaching the platforms.

In New York there are a number of buildings, such as the Singer Building with its 41 stories, and the Woolworth Building with its 55 stories, that it would be practically impossible to reach the top of with an aerial line. In such cases the line could be run through the building at the twentieth

or thirtieth-floor level. In Chicago the situation is more favorable, there being a surprising regularity in the sky lines of the principal streets of the loop district. In few cases would spans of more than 200 ft. be required. In a steel span of this length the expansion or contraction due to heat and cold would amount to about $1\frac{1}{2}$ in. for a change of 100° . No serious difficulty would be caused by twice this variation in length of span. There would be no necessity for "grade" crossings. North and south and east and west lines would undoubtedly be built at different levels, while the diagonal lines could be built at a third level. All could be served by the same stations, with the same elevators running to the three platform levels.

3599

LUNCH COUNTERS DESIGNED IN NOVEL STYLE

By an ingenious arrangement of his lunch counters a Chicago restaurant man has effected a saving of about 18 per cent of the space required to feed a given number of patrons, besides giving each customer plenty of elbow room and enabling the girl waiters to do their work in greater comfort. The space usually occupied by long straight

counters is broken up into sections, each forming three sides of a rectangle, with three pivoted stools to a side, leaving a clear space in the middle of the rectangle for the waiter, who thus has nine persons to serve when the seats are filled. Each stool has a comfortable low back, and the new arrangement, which accommodates over

Novel Arrangement of Seats in a Chicago Lunch Room: Each Waitress Has Nine Customers to Serve and a Clear Space to Work between Them. The Plan was Designed by the Proprietor

Brown & McKeen
21 E. Adams, Chgo.

90 customers at a time, is said to work well, especially during the rush incident to the noon and supper hours in one of the busiest streets of Chicago's retail district.

367° FRUIT PICKER'S TRAY SAVES USER'S TIME

Rapid picking of berries or other fruit is made possible by using a recently patented tray which is held in

Fruit Picker's Curved Tray Having Raised Edges and Held in Place by Shoulder Straps so That Both Hands can be Used in Picking

front of the wearer by straps extending around the waist and over the shoulders. It is curved to conform to the shape of the body and has raised edges that prevent the baskets set on it from sliding off. The device permits the use of both hands, and its capacity is such that time is not lost in frequently stopping work to renew one's supply of empty containers.

3919 (2.) ALWAYS LUMINOUS PAINT

FOR LIGHT SWITCHES

A compound which is continuously self-luminous is to be used by a large firm in the manufacture of electric-light switches, and the like, so that they may be easily found in the dark. This "radium paint," as it has been called, should not be confused with substances now on the market which are luminous only after being exposed to the light for several hours. The new preparation contains a small quantity of radium bromide which, in the dark, gives the paint about the brightness of a rubbed sulphur match. On aeroplane compasses a luminous compound is used that shines quite brilliantly, but it contains such a large percentage of radium that it rapidly disintegrates the zinc sulphide contained in it so that it lasts only about a year, whereas this preparation for switches will last for 10 to 15 years, it is said. For switches already installed it is proposed to supply luminous-head screws which would reveal the position of a switch in the dark.

3932 FAMOUS TENNESSEE CAVES BEING DEVELOPED

The development of two historic caverns in Tennessee, known as Arch Cave and Bone Cave, in Van Buren County, is now in progress. During the Civil War Confederate recruits are said to have been secretly mustered into service in Arch Cave, while Federal troops scoured the territory overhead. One room in this vast underground area is known as the "Muster Ground." It has a level floor, is 60 ft. wide and 300 ft. long, and is surmounted by a symmetrical oval dome. On at least one occasion, southern soldiers took refuge in these subterranean passages when hard pressed by the northern army. Until the Civil War broke out, the caves were inhabited by vast numbers of bats, and it is estimated that thousands of tons of bat guano, rich in potash and ammonia, have accumulated there.

and which will render their location visible in the dark. "radium" paint will be used, similar to that already readily employed on luminous dial watches, compasses, etc. This paint is continuously self-luminous, and, it should be noted, is to be distinguished from the luminous paints and l-chain balls which have been on the market for some years, which require exposure to strong light to make them luminous in the dark for a period of several hours.

The base, zinc sulphide, is the same for the new self-luminous paint as for the older phosphorescent paint which absorbs light and then gives it out again, shining with a greenish or bluish glow in the dark. The new paint, however, contains a small quantity of radium bromide, the alpha-particles of which, continuously bombarding the crystals of the sulphide, render it luminous in the dark with a pale greenish glow of about the intensity of a rubbed phosphorous match. By increasing the quantity of radium compound included in the paint the more brilliant can this phosphorescent glow be made. On aeroplane compasses used by the European armies, the luminous compound employed is of such intrinsic brilliancy that its glow can be seen even in contrast with twilight. Such a high mixture of radium compound, however, rapidly disintegrates the zinc sulphide, so that the life of the paint may be barely twelve months. In the intensity to be used on the new switches, which has been found most practical for average use on watch dials, etc., the figures are readily visible in a darkened room, and such paints have an assured luminous life of ten to fifteen years, if not longer.

It is proposed to tip the switch push buttons with this luminous compound, so that when entering a darkened room the user can quickly find the button, press it, and secure electric light.

In order that ordinary flush switches already installed may be made luminous, the electrical manufacturer referred to has devised the ingenious expedient of luminous-tipped screws which can be used to replace the present screws, giving visible points of luminosity by which the switch can be located in a darkened room.

The cost of the making and applying the self-luminous paint is, at present market prices of materials, about \$1 per square inch. At this rate it is expected that the extra cost of equipping an ordinary electric light switch will be from 20 cents to 30 cents.

has removed its New York office, in charge of William A. Daunt, from the Country Life Permanent Exposition Grand Central Terminal, to 31-33 East Twenty-seventh Street.

Brass Mills Cause Delay in Flashlight Deliveries.—The French Battery & Carbon Company has announced that owing to the failure of brass mills to make contract deliveries of sheet brass, cigarette type cases will not be ready for delivery until Nov. 1, 1916, and number 33 lighting batteries will not be ready for delivery until Feb. 1.

New Buffalo Location for Western Electric Company.—The Western Electric Company has moved its offices and showrooms in Buffalo from 98 Terrace to 709-11 Main Street. The new location, with two large show windows fronting on two streets, affords splendid display facilities. J. W. Tabb is the manager.

Fixture Manufacturer Increases Factory Space.—The Mohrlite Company of Urbana, Ohio, manufacturer of direct, indirect and portable electric fixtures, is moving into a new 60 x 100-ft. factory. In its new home this concern will occupy three times the floor space of its present quarters. This company moved its factory from the Pacific Coast to Urbana last January, and since has outgrown the space taken at that time. A part of the increased business is attributed to orders received from the following foreign countries: Sicily, Norway, Australia, Japan, Hawaii, England and France.

General Vehicle Company Moves Chicago Office to New Quarters.—The Chicago sales office of the General Vehicle Company has been removed from the Otis Building to quarters on Automobile Row at 1621 Michigan Avenue. Here the company will have an office and showroom 43 ft. by 105 ft. in which truck chassis will be exhibited, and a room back of this 400 ft. by 43 ft. where a large stock of parts will be maintained. There is also sufficient space for a service station which the company may install at a later date. The Chicago manager of the General Vehicle Company is C. W. Squires, Jr.

Shortage of Freight Cars.—Conditions which are steadily becoming more acute have recently prompted the Interstate Commerce Commission again to call attention to the threatened shortage of freight cars and to urge the adoption of all possible steps to alleviate conditions. The commission urges upon both carriers and shippers the necessity for close supervision of the methods of loading, unloading and moving of cars to secure the fullest possible use of available equipment. The commission emphasizes the responsibility of shippers securing the prompt and full loading of cars, and of consignees exercising the same degree of promptness in their unloading and release. It is urged that individual shippers and their associations and the carriers co-operate in this matter in order to avoid, so far as possible, the delays consequent upon a general car shortage.

3157

FARRAGUT'S FLAGSHIP WITH CANVAS SPREAD

"Old Salamander" was the popular title that David Farragut, the first admiral of the United States Navy, won as commander of the "Western Gulf Blockading Squadron" in the days of the secession. His flagship, the "Hartford," that fought its way up the Mississippi with dash and boldness, is the trim little vessel shown under way in the picture above. The boat now serves as a receiving ship and is stationed at the Charleston Navy Yard.

CAUSE EYESTRAIN

Sci. Am. 1-27-17

There are more factors involved in the proper presentation of motion pic-

tures than the average person realizes, and if any one of these is not as it should be, it may result in injury to the eyes of those who view the "movies" frequently. This fact has been brought out recently by the acting secretary of the National Committee for the Prevention of Blindness. He has declared that either defective photography, improper illumination, poorly developed films, or inaccurate projection, may subject the eyes to overstrain.

Furthermore, constant attendance at motion-picture shows in many

cases reveals some weakness of the optics that was unknown before. Favorable conditions for the eyes can be obtained by having the theater as light as possible, by sitting directly in front of the screen, and by selecting a seat as far back as possible.

BUBBLE FOUNTAIN FOR AN ORDINARY FAUCET

Any ordinary faucet can be readily converted into a drinking fountain of the bubble type by means of an ingenious attachment recently devised by a Denver woman. Even when attached, it does not interfere with the customary use of the faucet, as it can be instantly swung to one side when pulled down slightly from the water outlet, with which it has a pressure contact.

Site by a Freight Engine

3758

LOCOMOTIVE PULLS CHURCH TO NEW SITE

Among the many unusual methods employed to move buildings, few have been as novel as that used in South Bend, Ind., to transport an old church to a new site where it was to be remodeled into a theater. The structure, after being properly blocked up, was moved over to a railroad track and coupled to a freight engine. Then the locomotive slowly drew the bulky load a distance of five blocks, to a point not far from the new location. Because of unexpected delays nine hours were consumed in making the transfer.

ONE-WHEELED RICKSHA USED ON AFRICAN TRAILS

The one-wheeled ricksha of Africa, like its two-wheeled ancestor, the jinrikisha of Japan, was the invention of a missionary, the designer of the African vehicle being a Swede engaged in mission work on the Congo. An early form of the ricksha is shown in the illustration. Later models of somewhat different construction are made in England and are called "bush cars." The vehicle consists of a framework of bicycle tubing, supporting a cushioned chair seat over a single, low, rubber-tired wheel. The handles in front form

a continuous loop, and the rear handles resemble those of a wheelbarrow. Two native boys can easily transport a passenger in the ricksha, and it is the only vehicle practicable for many of the narrow and crooked foot trails which are still the only roads in the greater part of Africa.

TRUCK SUPERSEDES SLEDS IN ALASKA MAIL SERVICE

The automobile truck has found its way as far north as Alaska. Last

November, after the close of navigation, the government employed a machine with a four-wheel drive in place of dog teams, to distribute the mail in the vicinity of Nome. Before the holi-

days the loads weighed as much as two tons and sometimes a dog sled was used as a trailer. The longest trip made was from Nome to a point 22 miles distant. Instead of following a regular road, the sandy beach was traversed, and in spite of many patches of quicksand and bitter arctic weather, the powerful truck got through to its destination. At the end of the outbound trip the mail was transferred to sleds and carried on to more distant points.

SIXTEEN-CYLINDER ENGINE FOR AMERICAN AEROPLANES

America's gradually increasing concern in aviation matters is beginning to bear fruit, for inventors and manufacturers are concentrating more and more attention upon the development of engines that will free us from dependency upon those of European fabrication. It is therefore interesting to know of a new rotary motor with 16 cylinders that has been developed by a Rochester, N. Y., engineer. Freedom from vibration, obtained by balance and eight light explosions to each revolution; compactness of design, which keeps the head resistance of the unit down to that of a 25-in. circle; simplicity of arrangement, permitting a reduction of the usual number of working parts, and lightness, are among its outstanding features. The motor is rated at 150 hp. and weighs only 325 lb. Instead of using connecting rods, two pistons are built in one piece with a yoke in the center which has a

sliding bearing. The intake manifold is cast integral with the crank case. It will be understood that the motor revolves about the crank shaft, which remains stationary and serves as a part of the manifold, the carburetor being attached at one end of it just below the magneto.

“Soldiers’ Sensations in Battle

by Lewis R. Freeman,
Passadena College

"A German shell penetrating deep into the soft earth before exploding had driven him, unscathed by the explosion itself, straight through a barbed-wire entanglement. . . . He brought up like a snared partridge in a tangle of the wire, and they had to cut this away before he could be taken out."

IT was recently my privilege to see, in a single period of 36 hours, all the stages through which a wounded soldier of the British army passes from the time he is brought back to the most advanced dressing station on the Somme until he is put aboard the hospital steamer for England or sent to a convalescent depot to recuperate his strength in France. During this short time I saw several thousand wounded men—with injuries all the way from two hours' old to as many weeks—and the one thing that impressed me most (aside, of course, from their magnificent courage and fortitude) was the apparent absence among them of poignant physical suffering. It was the exception rather than the rule to hear a groan; and this was especially true of those whose wounds had received their first careful attention and who (either through rest or sedatives) were over the first shock of injury. In a visit to all parts of a hospital ship about to leave for England with many hundreds of stretcher cases whose wounds had all been received within a day or two, while many—not unnaturally—looked extremely depressed and uncomfort-

able, I do not recall hearing a single exclamation of agony or even impatience.

This is all very largely due to the promptitude and skill with which wounds are usually dressed on the western front; but it is also true that the present-day bullet rarely inflicts an extremely painful wound. Indeed, one talks with men dreadfully mangled by shrapnel bullets and shell fragments, who stoutly maintain—though their eyes may be big with horror at the sight of their shattered bodies—that the physical pain is not extreme. I have an especially clear recollection of a young Scotchman, with his lower jaw so shot away that he could not articulate a single coherent word, who still shook his head in vigorous negative when I asked him if the pain was very great. The one class of wounds which are invariably excruciatingly painful are those in the vicinity of the diaphragm, while shots through the lungs or abdomen, though not always imposing great agony, are usually very uncomfortable.

One of the most painfully wounded men I saw was also one of the most

slightly wounded. A German shell penetrating deep into the soft earth before exploding had driven him, unscathed by the explosion itself, straight through a barbed-wire entanglement. Faring better in one respect than the man who jumped into the bramble bush in the nursery rhyme, he did not "scratch out both his eyes." Protected, as they were, by a rather beetling brow, these escaped injury; and they were about the only part of his unfortunate anatomy that did escape. While there was not a cut on him over half-an-inch deep, neither were there more than a few inches of cuticle at any place on his body that had been spared by the cruel barbs. Some of the furrows on his back and legs were over two feet long.

"He brought up like a snared partridge," said one of the doctors who at-

tended him, "in a tangle of the wire, and they had to cut this away before he could be taken out. Although the cuts were not deep, the germ-laden earth of the Somme was so thoroughly rubbed into them that only repeated injections of antitoxin saved him from blood poisoning. I have never known a human body to 'neutralize' so much antitoxin. During the first two weeks he was here he was constantly in greater pain than any one of the many hundreds of far worse wounded men that passed through our hands in that time. He's out of agony and on the way to sure recovery now, but we had a hard fight to save him."

It was nearly a month after he had been injured that I talked with this man, but the memory of the experience was still enough to make his eyes contract with horror when he spoke of it. He had been wounded twice before, he said, but this was the first time he had experienced great pain. "How did it feel?" I asked. "Like being curried"—he had been a groom and the expressive simile was doubtless the first that came into his head—"with a red-hot currycomb," he replied instantly. "It didn't stop smarting for two weeks, and the worst of it was that there wasn't any place left to lie down on, I was that scratched. There's one consolation, though," he added with a smile, lifting the edge of a bandage to show where the scars

"I was about 40 or 50 yards from the mine when it exploded. . . . The earth rocked; it billowed in waves like the surface of the sea, and I was thrown to the ground. . . . Then the things that had been thrown up high in the air began to fall, the heavier stuff first, the lighter later and more gently. . . . I struggled clear of the encompassing mass three or four times before my strength and senses gave way together and I fainted."

were healing in alternate welts of red and white: "if they send me to prison some day, they'll only have to stamp the broad arrow on my back. There won't be any need of a suit of stripes."

As a consequence of the unprecedented artillery bombardments of Verdun and the Somme, and the incessant mining and countermining, the proportion of men buried in earth and rubbish in these areas has been a hundred times greater than in any operations of wars of the past. Those within the direct swath of the explosions are, of course, usually badly mangled or killed instantly. There is, however, a very large number of unwounded, or but slightly wounded, buried by great shell and mine explosions, and it is astonishing how large a proportion of these are rescued little the worse for the experience.

This is largely due to the soft porous earth all along the western front, which comes down on a man, as I heard a Tommy who had been through the mill put it, "as light as a feather bed." A heavy shell striking within a few yards of a trench will, unless there is a lot of "chicken wire" or wattle built into the sides, usually cave it in. Bags of earth become hard after a day or two, tending to retain their shape even when upset. If a man is buried under a great many of them life may well be crushed out of him; but if the covering is not too heavy, enough air will usually get in between the bags to prevent his suffocation. I

talked with one man who said that his worst discomfort during the ten hours he was buried under six feet of sandbags was from fleabites which, because his arms were pinioned, he could not scratch. Another, who was buried and stunned under a heavy layer of bags, was located and rescued the sooner through the whining of the company's pet dog that was covered up near him.

Mining and countermining have been responsible for some remarkable exploits and sensations. One of the most thrilling recitals I ever listened to was that of a sapper who was in command of a party trying to countermine a tardily discovered tunnel which the Germans had driven up almost under a very important British position on the Somme. "Before we located the tunnel," he said, "the Germans had driven it very nearly to a point at which the ex-

"Up flew me and the sandbag together, and the first thing I knew was a 'ell of a crack across the 'ips, and there I was 'anging in the blooming tree like last week's wash.'"

plosion of a large mine might have had very serious consequences for us. Our game, therefore, was to frighten them away, or, failing that, at least to hustle them so that they would place and fire their mine as far away as possible from the point at which they aimed. Accordingly, in driving our counter-cut, we made as much noise as we could in digging in order to give them the impression that we were much nearer them than we really were. This did not stop them, and, as they appeared determined to push on to their original objective, the only thing left for us

to do was to drive as near them as we dared and rush up the explosive for a small mine in the hope of caving in their tunnel by the shock, or, if luck were with us, even of setting off any explosive they might be getting in place.

"The ticklish part was in deciding how long to hang on, how long to wait before starting our little diversion. If we fired too soon we might be so far away from them that their cut wouldn't be affected, and then all our work would be lost and there would be left no means of checkmating them. If we waited too long they might push to a point so near that their end would be accomplished. Not a dirt-grimed mole among us—nor probably among the Germans either—but, consciously or unconsciously, was trying to pierce that earthen barrier with his mind as well as his tools and know the mind of the men on the other side. Perhaps it was because German psychology—here as in diplomacy—was faulty; perhaps it was only sheer luck. At any rate—I can't describe the sensation, but it was just as though something suddenly seemed to say to me, 'Now's the time!'—I fired such stuff as I had on hand first, and at what was probably about the right moment. The 'heading' of the German tunnel was even nearer us than I had anticipated and—although I was never sure that we detonated any of their explosive—their cut was so shattered and shaken that they did not attempt to use it again."

An officer of a London regiment who was introduced to me as "a man who had carried out to the letter the work he had been sent on, after having been buried for over an hour by the explosion of a German mine," in trying to explain to me "what it felt like," led me to a little eminence from which, standing on the ruins of a village church, we had an unobstructed view of a sector of the German trenches, a half mile away, that was under a concentrated bombardment of the British "heavies" in preparation for an imminent attack. "You see the way the earth flies up with a rush and falls

almost gently back," he said, pointing to the geyser of dust and débris and smoke that followed the explosion of a 15-in. shell. "Well, that is a mine on a small scale. Anything or anybody right over it is torn to pieces; and serious injury is usually inflicted upon anyone struck by the more solid of the falling fragments. But—in this region at least—most of the stuff that goes up and comes down is soft earth, and the chances of a man's getting out of that (if only he isn't buried too deep) are ten to one in his favor.

"It would hardly be proper for me to tell just why I happened to be where I was at the time. Suffice to say that I was about 40 or 50 yards from the mine in question when it exploded. Even at that distance the earth rocked—indeed it more than rocked; it billowed in waves like the surface of the sea—from the force of the explosion, and I was thrown to the ground by the sudden shock. A fragment of heavy timber flew by me. Some heavy lumps of earth struck me, but nothing more solid. These were driven straight out by the force of the explosion. Then the things that had been shot up high in the air began to fall; the heavier stuff first, with solid impact, the lighter later and more gently. Stones, fragments of timber, and bits of other trench materials arched over in even trajectory like the water of a fountain jet. After them came the clods and other stuff of medium weight. Then, out of the mushrooming cloud of smoke and dust which was swirling and spreading two or three hundred feet above, the lighter stuff—the finely disseminated earth, and leaves and pieces of bark—began to settle down.

"By great good luck, none of the heavy stuff struck me; and yet, for half a minute or more, the rain of clods was so heavy as practically to stun me. Although these fell to a depth of six or eight feet, I have always felt that, if I had not been more or less dazed by the shock, I could have fought my way upward fast enough to keep my head 'above water' all the time. Even as it was, I struggled clear of the en-

compassing mass three or four times before my strength and senses gave way together and I fainted. My last clear recollection was of having struggled free of the heaviest of the clods, and of the rather pleasant sensation—almost like the touch of falling snow—occasioned by the gently settling dust. It was probably this latter stuff—by cutting down my supply of oxygen—that caused me to faint. Fortunately, I had had the presence of mind to pull a corner of my tunic up across my face, so that, as there was plenty of air all through the fallen dirt, I would probably not have suffocated even if I had been covered up for several hours. As it was, I was so little upset in mind and body after being pulled out that, after a spell of coughing, a drink of water and a few minutes' rest, I was still able to go ahead with what I had been sent to do."

One cannot talk long with a Tommy on the Somme without hearing some weird tale or another of what he has seen happen to one of his comrades as a result of shell explosions in the trenches. For obvious reasons these tales are almost invariably told about some one else; in fact, the one first-hand recital of such an incident that I heard was a far less illuminative account of what happened than might well have been told by one of the chief

actor's comrades. I talked with the man in a hospital where he had been for a month recovering from crushed pelvic bones and internal injuries caused by impact with the limb, 20 ft. from the ground, of a tree against which he had been thrown by a German shell exploding in his trench.

"I was sitting on a sandbag," he said, "when the blighter that done the business plumped right into the bottom of the trench and buried itself deep in the mud before exploding. Up flew me and sandbag together, and the first thing I knew was a 'ell of a crack across the 'ips, and there I was 'anging in the blooming tree like last week's wash. Didn't 'ave to 'ang on at all. It just plastered me round the lim' like a piece of soft meat. I couldn't climb down, and, as they 'ad no ladders, there was nothing to do but for one of the boys to shin up and let the remains of me down at the end of a line. Course it 'urt like 'ell, getting me down; but I'm sure I didn't go off in a faint at that stage of the show, cause I can remember cursing, with the little breath I 'ad left, some bloke 'oo 'ad mooched along and was tryin' to snap me with a bit of a camr'y 'e'd smuggled up to the trenches. Camrys in the trenches are strictly forbid, and you can jolly well believe I told 'im wot I thought of 'im for 'aving it."

3780 *Illustration*

MANY APPLICANTS FAIL IN CLIMBING TEST

Some indication of the physical endowments of the average young man in this country may be found in the results of a test recently given to applicants seeking positions in the fire department of Portland, Ore. Each man was asked to climb five rungs of a ladder in hand-over-hand fashion. Of the 150 who made the attempt 74 were able to climb the required number, while only 10 exceeded the minimum. The results of the trials are especially interesting in view of the prevalent discussion of the need of more systematic physical training for the young.

An Applicant for a Position in the Portland, Oregon, Fire Department Undergoing a Climbing-by-Hand Test

PERISCOPE REVEALS GOODS IN STORE BASEMENT

By the novel use of a periscope installed in a show window on Michigan Avenue, Chicago, an exhibit of goods in the basement, which would otherwise be completely out of sight, is revealed to the gaze of interested passers-by. The idea originated in the establishment itself, and so far as is known, this is the first case of commercial use of the instrument in this way. The eyepiece is fixed close to the window pane, at a convenient height to be used by persons on the sidewalk outside, and a small sign says, "Look! See the Exhibit in the Basement." On peering into the eyepiece, one can plainly see the goods displayed on the floor below, the shaft of the periscope passing through the floor of the show window, below which an arrangement

of mirrors set at the proper angle brings the display of basement goods into view.

3811 —

WATER SUPPLY OF CANAL ZONE CLOSELY COMPUTED

It is interesting to note that the estimates that were made by French and American meteorologists before the Panama Canal was built regarding the available water supply in that region were substantially correct, as is shown by the careful check which has been kept since the canal has been in operation. Rainfall and evaporation stations have been established over the Gatun Lake watershed, which comprises a large area, and an account is kept of the gain or loss of water due to lockages, spillway waste, hydroelectric-power generation, leakage, municipal needs, rainfall, evaporation, and increased or decreased storage water. In checking up it has been found that the estimates came within from 2 to 10 per cent of the actual totals, which is considered reasonably accurate in view of many changes in the Canal Zone in recent years.

3885 — (2)

RAILROAD DERRICK USED TO MOVE HOUSES

In removing houses that obstructed its right of way, a western railroad recently tackled the job with a large derrick—part of its wrecking equipment—and saved much time thereby. The method included the passing of

Viewing a Basement Exhibit of Plumbing Goods by Means of a Periscope on the Sidewalk Level: Note the Arrangement of Mirrors beneath the Floor, by Which the Goods are Made Visible from the Outside and Brought to the Attention of Passers-By

Moving a House with a Railroad Derrick: The Building was Supported on Steel Rails, Attached by Chains to the Arms of the Derrick. The Man at the Window and Other Residents were Undisturbed

four chains around the house to be moved, connecting them to steel rails on either side beneath the building, on which the weight rested, and then lifting the whole bodily into the air by means of the derrick to a new position beside the right of way. The houses being situated close to the track made the use of the derrick feasible, and the removal was accomplished without disturbing the residents or damaging the buildings, except where the roofs overhung.

3806

SHELL AND GAME BAG FOR SPORTSMEN

Both hunters and fishermen may be served by a combined shell and game bag recently placed on the market in California. This bag is provided with means for circulation of air over fish or game carried inside, has four pockets for shells or tackle, and is so hung and

adjusted that the contents of the pockets can be readily reached and the weight is distributed evenly. It is

Front and Side Views of Combined Shell and Game Bag Adapted to Carry Fish and Tackle

made of standard khaki duck and may be worn either with or without a coat. It hangs from the shoulders by broad straps, and buckles in front.

Summers Mfg. Co., Los Angeles

HUGE VOLUME TO CONTAIN "DEUTSCHLAND" STORIES

In commemoration of the historic first voyage of the merchant submarine "Deutschland" to America, a commit-

tee, organized in this country, is preparing a huge book which will contain every available reference to the submarine's trip which has appeared in American publications. The tome when finished will measure 6 ft. long and 2 ft. thick and will be presented to the Royal Library in Berlin. The names of those contributing in any way to this memorial will be engrossed on the pages of the book. The unique volume will be bound in solid silver, embellished with corners and clasps of wrought gold. It will rest on four gold eagles, two typifying Germany and two emblematic of the United States. This is the first instance on record, it is claimed, in which practically all that has been printed in a whole country concerning a historic achievement is to be gathered into one book.

First Design of Mammoth Scrapbook, Handsomely Bound, Which is to Contain All Available Clippings from American Publications Regarding the First Voyage of the "Deutschland." It will be Presented to the Royal Library in Berlin.

3797

SQUATTY MINE LOCOMOTIVE WORKS IN LOW DRIFTS

To meet conditions in a certain coal mine whose galleries are very low, a special electric locomotive which extends only 26 in. above the rails has

This Locomotive Weighs Two and a Half Tons, Is 26 Inches High, and Pulls a 50-Ton Load Easily. It was Built Especially for Use in a Coal Mine Whose Galleries Are Exceptionally Low

been built. It is fitted with two trolley poles, one on each side, and a 300-ft. reel of cable that is employed in passages too low to permit overhead conductors to be strung safely. The free end of this insulated line is supplied with a hook which the operator slips over the trolley wire in one of the main levels when he is about to enter a small side drift. As the locomotive proceeds the reel unwinds. When the direction is reversed and the distance retraced, the reel winds automatically, recoiling the cable rapidly so that it does not slacken enough to cause interference.

Columbus, O.

PIPE ORGAN IN A STORE SERVES TWO FLOORS

Some novel features of pipe-organ construction and service are embodied in a \$10,000 instrument recently installed in a progressive department store in Los Angeles. The organ and its

keyboard are placed in a large auditorium on the fifth floor, open to customers for rest and entertainment. Directly below, on the fourth floor, is the café of the store, to which the music of the organ is conveyed by means of a "musical radiator," 20 ft. long and 12 ft. wide, built of ornamental wood in the ceiling of the café and communicating directly with the pipe room above. This radiator is provided

Above Is the Auditorium of a Los Angeles Department Store, Showing at the Left the Keyboard of a \$10,000 Pipe Organ the Music of Which is Conveyed to the Café Below, by Means of the "Musical Radiator" Seen in the Ceiling in the Lower Picture

with heavy wooden shutters padded with felt, which serve to exclude the music at will. They are controlled from the organ keyboard, or from the café by means of a small stop which is

operated by air pressure. The keyboard is said to be equipped with 20 more stops than have ever been built into any other organ. Motive power for the pumps is supplied by electricity, or by a water-power motor if required. As the organ serves two floors, its cost is expected to be soon covered by the elimination of the café orchestra. It was built and installed by California mechanics.

Pipe Room of the Organ, Situated on the Auditorium Floor of the Store: The Bellows are Seen Just below the Pipe Ends in the Picture at the Right, Also a Glimpse of the Shutters of the "Musical Radiator"

PREPARING AERIAL FIGHTERS AT MINEOLA

By Some of Their Recent Squadron Flights the Mineola Airmen, Who Are Students and Instructors at the New Aviation Station Established at Mineola, New York, have Come into Notice. The Work That is Being Carried On at This Field Is Such as to Encourage the Advocates of Aerial Preparedness. The Picture Presented Above Shows a Group Studying the Details of a Model Monoplane Constructed by One of the Privates

The Service Uniform Worn by the Army Fliers Is of a Pattern That Differs Little, if Any, from the Togs of Most Civilian Airmen. The Cost of the Outfit Shown Above Is About \$75

It Is Not Sufficient That a Military Airman Be a Good Pilot, for a Complete Understanding of the Craft and the Knowledge of How to Set Up as Well as Repair It When Breaks Occur Are Imperative. Therefore the Student Fliers are Taught How to Assemble a Machine and Construct Minor Parts Which Might Sometime Require Renewal. This Picture Shows Them Hard at It in a Workshop at Mineola

FOR ARMY'S EMBRYONIC AVIATION SECTION

On His First Few Flights the Beginner is Accompanied by an Experienced Instructor Who Takes the Observer's Seat. In Addition to a Dual Set of Controllers, the Machine is Equipped with a Signalling System Which Enables the Tutor to Direct a Student by Pressing Different Push Buttons

This Battery of Searchlights Is an Important Part of the Equipment at Mineola. When Flights are being Made at Night the Small Flood Lights are Used to Guide the Airmen and Help Them in Making Safe Landings

Lookout Tower on Top of a Hangar. An Observer with Binoculars is Stationed Here Whenever Flights are Made. He Summons the Ambulance in Case There Is an Accident, and Dispatches a Mechanician When Motor Trouble Occurs

SPECIAL BOX CAR CARRIES AUTOS IN TIERS

In a new freight car special provisions have been made, enabling four ordinary autos to be loaded at once, or

In This New Freight Car for Autos the Windlasses Seen at the Right and Left are Used to Hoist the Upper Auto onto Its Platform of Channel Irons

five if they are not over 13 ft. long. The length of the car is 40 ft., height 10 ft., and width 9 ft. At each end there is a windlass-and-chain arrangement by which one automobile can be raised on a platform of channel irons and securely fastened in place so that another can be loaded beneath it. Thus two autos can be placed at each end, one over the other, by means of the special hoisting, locking, and safety devices, while a fifth can be put in the center of the car, if desired, and braced by the old method, namely by wood and nails. It is claimed that a great deal of time can be saved in loading and unloading motor cars by the use of the special box car, and that there is also a saving of freight.

(Steps are being taken to establish a plant in Columbia, S. C., which will manufacture starch from sweet potatoes.

GERMANS OBTAIN OIL FROM FRUIT STONES

Knowledge Nov 1916

An organization of German women has undertaken the collection of plum and cherry stones, according to a report, from which it is proposed to extract oil by a new process. This work is undertaken in an effort to overcome the shortage of oil in Germany. The cracked stones are treated with a solution of calcium chloride of such specific gravity that the shells fall to the bottom, while the kernels rise to the surface. These are skimmed off, washed and dried, and the oil is pressed from them. Oil prepared from plum stones in this way is described as having the odor and taste of bitter almonds. However, by treating it with steam or by heating it the odor can be largely removed. Exposure to the air for several days will effect the same change.

3849

BUILDING BURNS DOWN BUT FIREPLACE IS UNHARMED

It is not altogether uncommon to find a chimney standing after the structure built around it has been burned, but an unusual feature was added to such an occurrence in Waco, Tex., recently, in that a handsome fireplace as well as its chimney passed through a destructive conflagration practically unharmed. The structure destroyed was a fine clubhouse, and the fireplace, which was the gift of one of the members, was built of white limestone. Although the building was burned to the ground, the smoke flue, together with the handsomely embellished hearth, remained uninjured.

Waco, Tex.*

Meals for Several Hundred Soldiers are Prepared at One Time in This Kitchen Car, Which is Carried with Troop Trains Operated on One of the Canadian Railways

3846 *Army* LARGE KITCHEN CARS BUILT FOR TROOP TRAINS.

Kitchen cars that are individually of sufficient capacity to meet the needs of a fair-sized hotel are being carried with the long troop trains operated on one of the Canadian railways between military training camps and the seaboard. They have been constructed to facilitate the dining service so that meals can be prepared for several hundred men and served without confusion or delay. Each of these mobile kitchens occupies an entire car, is equipped with a 10-ft. range, steam-cooking apparatus, a spacious refrigerator, and other necessary paraphernalia. This is all installed on one side and inclosed by a long table extending the full length of the car. A passageway is provided between this counter and the unobstructed wall, so that waiters can enter and leave the kitchen without disorganizing the work of the eight cooks and helpers. A noncommissioned officer orders certain of the

soldiers in each car to act as waiters. At the appointed time a group of the latter from the first and the last cars walk to the kitchen, which is carried in the middle of the train, and get the big trays of food arranged for them on the serving counter. As soon as they have returned to their comrades, squads of waiters from the next two cars repeat the routine. In this way all of the soldiers are attended to within a short time and without difficulty.

3869 CATCHING TURTLES WITH A HOOKED STEEL ROD

Turtle catching is an invigorating occupation now followed with profit by hunters in various parts of the country, who ship their quarry to city restaurants where the creatures are made into savory soup. Turtles are particularly easy to catch in the late fall and winter when they are hibernating in the mud of a pool or near the bank of a stream. It is a common practice for

*by E. V. Smith
Supt. Dining + Porter Co. service
Second Troop Reg.
Toronto, Ont.*

J. S. Bassler

hunters to pitch camp in a well-stocked region and then systematically search along the shores of every body of water within a radius of eight or ten miles.

Expert Turtle Catcher Photographed Just After He had Captured Several Creatures with His Hooked Spear

On such expeditions a man often carries a hooked steel rod with which the sleeping creatures are jabbed and drawn from the water. The aggregate weight of turtles caught in a single hole will sometimes be as high as 500 pounds.

3728 —

NEW SUGAR PROCESS MAY INCREASE PRODUCTION

A gain of at least three and one-half per cent, it is predicted, can be made in the commercial sugar crop of the Hawaiian Islands, and other regions as well, because of a new process, discovered by a resident of Hawaii, which recovers sugar from the so-called "final molasses." The new method takes from the final molasses nearly one-half of the eight per cent of sugar that heretofore has been considered a total loss. The inventor declares that his

INV. J. N. S. Williams

Field Engineer, The H. Davis & Co.

process will involve practically no additional cost in production, and that the cost of additional machinery needed is not large. In his experiments he has worked on the theory that it is not the glucose gums or ash, but solely the water in the molasses, that has prevented the sucrose therein from crystallizing. After removing practically all the water by boiling, a centrifugal of very high speed is used.

3880 —

COSTLY TELEPHONE STANDS IN SUMMER HOME

Ornamental standards, gold-finished and said to cost \$200 apiece, are among the special features of the telephone system recently installed in the summer home of a Chicago manufacturer at Ipswich, Mass. The system is of the automatic type, making intercommunication easy between any of the rooms of the large house and also with the indoor and outdoor departments of service, the casino, tennis court, Italian and rose gardens, swimming pool, farmhouse, dairy, and power plant. A directory card is conveniently mounted on each of the telephone standards. The European type of hand receiver-

Telephone Stand in a Millionaire's Summer Home. It is Gold-Finished and Has the European Style of Instrument

transmitter is used, this combined instrument hanging from a contact-lever hook on the heavily gilt standard.

A Distinctive Automobile Having, Instead of Doors, Nickeled Steps by Which One Mounts over the Side. A German Saber Serves as an Emergency-Brake Handle. A Launch Whistle Gives Warning Signals, and a Yacht Flag, Held Slantingly, Adorns the Rear

3784 AUTO HAS MILITARY AND MARINE ADORNMENTS

The fact that a German saber has been used for an emergency-brake handle is perhaps the first of several novel features to be noted about the body of the car shown herewith. The end of the saber has been cut off and the weapon welded to the brake lever, while a slit has been made in the side of the scabbard so that it serves as a sheath. The car has no doors and access to it is gained by steps of nickeled brass, inlaid with rubber treads. A nickeled angle iron forms a finished edge around the top of the body. On the front is a launch whistle operated by air from the air-starter tank, while at the rear a flag is held in place by a yacht flag socket. The windshield, not shown, has a frame of double sheets of brass, nickeled on the front and dull green on the reverse.

¶The president has forbidden the sale or transfer of any American-registered vessel to a foreign registry or flag, without consent of the new shipping board. Over 100 vessels were sold to foreign registry in the seven months preceding this order.

3454 CAMPAIGN AGAINST KILLING OF HARMLESS SNAKES

A natural-history society of southern California is trying to prevent the killing of harmless snakes, and is conducting a campaign of education to inform the public that the only harmful and dangerous snake in that state is the rattlesnake. All other snakes in California are classified as public benefactors, because they destroy the rodent pests that convey diseases and damage crops. The doctrines of the society are being spread broadcast by means of placards and signs along the highways, trout streams, and mountain trails, and in the forests of the state, also through the press, the public schools, and the Boy Scouts.

VAST AUDIENCE SHOWN FILM ON FOUR SCREENS SIMULTANEOUSLY

FOUR separate exhibitions of a popular photoplay were given simultaneously in Convention Hall at Kansas City recently before some of the largest moving-picture audiences on record. The entertainment was a free one given for advertising purposes by a local newspaper. There were five performances and at each of them nearly 14,000 persons crowded the auditorium. Four screens were arranged in the form of a square and suspended in the middle of the big room, while projectors were installed opposite each. This made it possible for practically every spectator to see the screen. By means of a signaling system, the films were run almost in synchronism.

Picture Screen

LIFE BELT EQUIPPED WITH FLASH LIGHTS

In the darkness of a storm at sea, many a shipwrecked person, clinging to a life preserver, has finally despaired and gone down for lack of means by which he or she could signal to rescuers. This fact has recently prompted the invention of a luminous life belt, by a resident of New York City. It is made in either circular or folding form, and firmly strapped to it are two electric flash lights, thoroughly insulated against contact with the water and operated by a conveniently located button. The two lights are placed some distance apart so that if one is submerged the other probably will project above the water. The flashing signal of such a life belt would many times attract attention when a person clinging to an ordinary pre-

Life Belt Equipped with Flash Lights with Which the Wearer could Signal in the Dark to Rescuers and so Indicate His Whereabouts

server would be undiscovered in the darkness.

CONTOUR OF GIRL STUDENTS RECORDED BY MACHINE

In sizing up the girl students for physical-culture work at Wellesley College, accurate outlines of the chest and back are obtained and measured by means of an apparatus called a thoracimeter, specially designed for the college gymnasium. It comprises a platform and a standard supporting two outlining and recording arms and a wide strip of paper mounted on rollers. The student stands on the platform between the metal arms, the outer ends of which are then passed down the middle lines of the back and chest, respectively, from neck to waist. The outlines traversed are recorded automatically upon the paper strip by crayons at the inner ends of the arms. Thus when

the student steps off the platform she sees before her a graphic outline of her body above the waist. From this the instructors decide what exercises the girl needs to develop the lines of health and beauty, and subsequent outlines

ELECTRIC LOGS FOR FIREPLACES

Sci. Am., 1-20-1917

Electrical fire logs are now being manufactured in various styles for houses and apartments which are similar to those which have been in use for stage purposes for several years. A translucent material and asbestos, reinforced with metal, are used in their construction. The bark and ends are fashioned and hand-painted to resemble natural wood. Inside the logs, which are hollow, are placed electric lights that give the fixtures the appearance of burning.

LONG-LIVED DRY CELLS OF NEW TYPE

A patent has been granted to two Orange, N. J., inventors recently, pertaining to a type of dry cell intended to overcome the defects of an ordinary cell due to the drying out of the electrolyte and the deterioration of the electrode even when on open circuit. In this new cell a gelatinous electrolyte of caustic soda and starch is used, and by this ingenious combination the ordinary cause of trouble has been largely eliminated, it is claimed. When zinc and oxide-of-copper electrodes, for example, are employed it is said that the efficiency of

the cell is greatly increased, being even greater than a wet battery employing similar electrodes and an alkaline electrolyte.

RUBBER SHEATHS SAFEGUARD ELECTRICIANS' WATCHES

Rubber cases are being made to protect the watches of electrical workers and others from being injured when carried into highly charged electromagnetic fields. Such a covering envelops all but the face of a watch and thoroughly insulates its metal parts. When applied it also lessens the chance of an instrument slipping from a workman's pocket. A protector of similar character is provided for those who desire to safeguard their timepieces from dust and water. This type of covering does not extend over the stem and ring, as does the other, but seals the seams.

3. In a galvanic battery, a colloidal gelatinous electrolyte containing in combination, sodium hydroxid, an organic material, and another inorganic material which acts to increase the capacity and conductance thereof, substantially as described. 347-601

3. In a husking machine, the combination of a horizontally rotatable frame having a series of peripheral pockets and a pair of oppositely acting rotatable husking rolls in each of said (separate and distinct) pockets.

4. In a husking machine, the combination of a rotatable frame mounted on a horizontal axis having an annular series of rotary husking rolls projecting between the sides, and partition members projecting between the sides and overlying the sides of the rolls whereby to form exterior pockets.

5. In a husking machine, the combination of a rotatable frame having an annular series of husking rolls arranged in pairs, and a peripheral pocket on the frame for each pair of rolls and a stationary curved guide adapted to overlie the material when in engagement with the rolls and said pocket.

[Claims 6 to 31 not printed in the Gazette.]

201,477. MAIL-BAG CATCHER. HENRY G. LINDERWELL, Portage, Wis. Filed Feb. 5, 1916. Serial No. 76,404. (Cl. 258-20.)

1. A mail catcher comprising a receptacle having an open inlet, a hollow standard in said receptacle, an abutment carried by said standard, said standard being provided with a side opening, a plunger slidably mounted in said hollow standard and yieldably held in a raised position and provided at its upper end with a latching head, a closure pivotally mounted in said receptacle for moving across the inlet and provided with a latching finger for passing through the opening of said standard into engagement with the latching head of said plunger, a trigger for said closure positioned for engagement with an article dropped into the closure, engagement of said trigger by the article moving the closure to a closed position in engagement with the latching plunger, and means whereby said latching plunger may be moved to an inoperative position.

2. A mail catcher comprising a receptacle, a standard in said receptacle, an abutment carried by said standard and extending through the inlet opening of said receptacle, latching means carried by said standard and yieldably held in an operative position, closures movably mounted in said receptacle upon opposite sides of said standard, triggers for said closures extending beneath the inlet

opening of said closure, said triggers when moved by an article placed in said receptacle bringing said closures to a closed position in engagement with said latching means, and means whereby said latching means may be moved to an inoperative position to release said closure.

3. A mail catcher comprising a receptacle provided with an inlet, an abutment extending across the inlet of said receptacle, latching means in said receptacle, closures movably mounted in said receptacle upon opposite sides of said latching means and provided with means for engagement by said latching means to releasably hold the closure in a closed position, and triggers for moving said closures to a closed position.

4. A mail catcher comprising a receptacle provided with an inlet, an abutment extending across the inlet of said receptacle, latch means in said receptacle, shafts extending through said receptacle, closures connected with said shafts and having their upper end portions provided with means for engagement by said latch means to releasably hold the closures in a closed position, and trigger plates extending from said shafts beneath the inlet of said receptacle when said closures are in an open position.

5. A mail catcher comprising a receptacle provided with an inlet, an abutment extending across said inlet, latch means mounted in said receptacle, a closure movably mounted in said receptacle, and a trigger for said closure positioned beneath the inlet when the closure is open, engagement of said trigger by an article entering said receptacle moving the closure into engagement with said latch means.

1,201,478. LUBRICATION OF BEARINGS. ERNEST W. LARK, Granite City, Ill. Filed Aug. 31, 1915. Serial No. 48,104. (Cl. 34-24.)

1. An emergency lubrication for a bearing, comprising a primary lubricant chamber and a secondary lubricant chamber, both chambers communicating with said bearing by a common outlet passage,—and a seal for said passage adapted to be opened by abnormal heat from said bearing.

2. An emergency lubrication for a bearing, comprising a primary lubricant chamber and a secondary lubricant chamber, a pipe from said bearing to the primary lubricant chamber and having a hole in the side thereof communicating with said secondary chamber, and a seal closing said hole and the end of said pipe adjacent to said bearing and adapted to be opened by abnormal heat from said bearing.

3. An emergency lubrication for a bearing, comprising a primary chamber to contain a liquid lubricant and a secondary chamber to contain a high-melting lubricant, a passage leading from said bearing to both of said chambers, and a fusible seal for said passage located adjacent to said bearing and adapted to be melted by abnormal heat from said bearing, and thereby effect a flushing lubrication of said bearing by the liquid lubricant and a supplemental lubrication by the other lubricant.

4. An emergency lubrication for a bearing, comprising a double chamber for a liquid lubricant and a slow-melting lubricant, respectively, a passage leading from said bearing to both said lubricants, a heat conductor extending from said bearing to said double chamber, and a fusible seal, located in said passage and also in contact with said heat conductor, whereby the opening of said seal will release the liquid lubricant at once and the continued

REMARKABLE PAINTINGS

IN A FISH STALL

GAWALTON

Artistic genius sometimes crops out in strange places. The walls of a sea-side fish stall are almost the last place

C/o The Post, Boston

This Wall Painting of a Fishing Crew Hauling a Seine on the Banks Adorns the Interior of a Boston Fish Stall and Is the Work of an Amateur Artist Who Handles Fish and Never Took an Art Lesson

where one would expect to find mural paintings of artistic merit; but two pictures that deserve this description may be seen in a fish stall on a wharf in South Boston, where they were painted by one of the fish handlers as decorations to cover up the bare walls. It is said the man never took an art

lesson, and artists have declared his work wonderful. One of the paintings represents a seining scene on the Banks, with the crew of a large dory hauling the seine in the foreground and a fleet of fishing schooners in the background. The other picture shows the final struggle of an infuriated swordfish that has been hooked by two men in a small dory, one of whom is about to give the final thrust with a long gaff. Among other merits, the paintings are remarkable for their faithfulness to detail.

3931—

STANDARD SET OF WORDS TO DESIGNATE COLORS

The limited number of English words by which various shades of color can be accurately designated is being supplemented by means of a color card issued by the Textile Color Card Association. A movement is on foot to introduce this standard generally among selling agents, millmen, and any others who are especially interested in the question of colors. There are 132 different hues on this card and each is given a name. Up to the present time every season has witnessed the introduction of some new color term used to designate a particular shade which is being featured by a certain manufacturer of fabric, millinery, or other lines of goods. This inevitably causes much inconvenience and misunderstanding. If the standard card referred to becomes widely

AUTO DRIVING TAUGHT BY NOVEL METHOD

A practical method of teaching novices to drive an automobile without leaving the store has been devised by the manager of a Los Angeles agency. The car used for the purpose is blocked up so that the wheels are off the floor, and the exhaust is connected to a pipe that leads outside the showroom. Thus, with the motor in operation, a

Harold L Arnold auto agency

Los Angeles

beginner seated in the car can learn to throw the clutch in and out, shift gears, accelerate or slow down the engine,

Teaching a New Owner How to Drive Her Car: Note the Series of Small Levers near the Instructor's Left Hand, Which Raise Signals at the Other End of the Table for the Pupil's Guidance

apply the brakes, and so forth, just as though the car were actually running on the street. By a system of special signals, like those used in traffic regulation by the police, the instructor tells the novice what to do, then sees that it is properly done.

2939—

SLEDLIKE BASE FOR LAWN SPRINKLER

A simple device which lessens the inconvenience of moving a lawn sprinkler, consists of a sledlike base of galvanized iron, about 20 inches long, to which the sprinkler is securely attached. The

Galvanized-Iron Base for a Lawn Sprinkler: With This Sledlike Support the Sprinkler can be Drawn from Place to Place While the Water is Running

rounded bottom of the support permits it to slide along over the grass with either end foremost. To transfer the sprinkler to a new location it is only necessary to pull it along with the hose, without stopping to turn off the water and then turn it on again.

**OUTSIDE TRUSSES SUPPORT
BURNER TOP OF NEW TYPE**

Like a portion of a Zeppelin's frame-
work, standing on end, rises the new
type of burner top which is now manu-

New Type of Refuse Burner for Sawmills, Having
a Screen Top Held in Place by an Outside
Framework Composed of Curved Trusses

factured in Everett, Wash., for sawmill
burners. This cap is intended to catch
the sparks from the bark and slabs that
are consumed in the bottom of the big
cylindrical furnaces. It is composed of
heavy wire screening, held in place by
overhanging trusswork. This steel
frame is made up of numerous curved
ribs fastened to the upper end of the
sheet-steel cylinder, on the outside.
These converge and form a domelike
top, inside of which is the wire screen-
ing. In this form of burner top there
are no interior obstructions to hold the
heat, and no walk is required around it
on which sawdust and fragments can
accumulate and later, in burning, injure
the burner. Repairs can be easily made
from scaffolding between the truss
beams.

**WAR MENUS LIMIT ENGLISH
DINNER COURSES**

Sp. here 12/23-1916
Since the new antiextravagance laws
of food control went into effect in Eng-
land on Christmas Day, 1916, the num-
ber of courses which public restau-
rants are permitted to serve has been
limited to three for dinner and two for
luncheon. Meat, fish, and pudding or
sweets are each counted as one course;
soup, side dishes, and dessert of raw
and dried fruit only, each as a half
course. But the side dishes must con-
tain no fish, meat, poultry, or game;
otherwise each counts as a full course.
For officers a maximum charge has
been fixed, amounting to the equiva-
lent of \$1.35 for dinner and 85c for
lunch. Bread, butter, cheese, and bis-
cuits (crackers) do not count at all, so
that the regulations are not likely to
prevent anyone from getting a satisfy-
ing meal.

**USED RAILS BRING SAME
PRICE AS WHEN NEW**

The high price of steel may be said
to have wiped out the depreciation
which resulted from 26 years' use of
the rails in an electric car line, running
out from Tacoma, Wash. This fact
was brought out a few months after
the company began to improve four
miles of its track with new and heavier
rails. The old 40-lb. rails were torn up
and stored in the yard of the company.
Since the war began some 260 tons
have been sold to logging companies
for \$7,800, which is \$30 per ton, or just
what they cost when they were laid
26 years ago. Even the steel which
formed the track at the curves, and
ordinarily would be regarded as worth
little, sold for half its original cost.

ⒸThe Philadelphia mint is preparing
to store a total of \$1,000,000,000 in gold
bricks, it is said. Already \$470,000,000
is deposited there and the rest of the
billion is to be brought from the New
York subtreasury, which is overflowing
with gold coming from Europe.

SPUN GLASS AS INSULATION FOR STEAM PIPES

Refrigerating *1917*
Spun glass has been successfully used in Germany recently as an insulating material to cover steam pipes. The method of installation is to wind the spun glass loosely around the pipes, between rings of asbestos, placed at intervals, the insulation being then inclosed in asbestos braid and sailcloth and painted over with oil paint, or tar. The spun glass, consisting of fine glass threads, makes a loose, light, and porous wadding, which adds little to the weight of the pipes and makes a good insulating material because of the presence of air between its threads. It is not affected by vibration of the pipes, by high temperatures, steam, water, or acids, and retains its insulating power indefinitely.

VOICES OF GREAT SINGERS VISUALIZED FOR STUDY

Sound vibrations produced by the voices of some of the world's foremost singers were visualized through the medium of an ingeniously arranged projection apparatus and shown on a stereopticon screen recently for the study of delegates attending a convention of scientists. The device that was employed for this purpose was fitted with a delicate gauze diaphragm through which the sound waves passed, causing it to vibrate. The image of the oscillating diaphragm was cast onto a revolving triangular mirror by a series of intermediate reflectors, and in turn projected upon a screen where it was shown magnified 40,000 times.

Records Showing the Vibrations of Different Singers' Voices Appear on the Chart Back of the Projecting Machine

PRIZE WHITE DAHLIA GIVEN TO CALIFORNIA CITY

26 & 27
As a token of the affection he holds for the city, Luther Burbank, the plant wizard of the Pacific coast, recently

Bulb of the Champion White Dahlia being Presented by Its Creator, Luther Burbank, to the Chairman of the Oakland, California, Chamber of Commerce

presented to the people of Oakland, Calif., the bulb of the largest white dahlia that, so far as is known, has ever been produced. Picturesquely enough, the planting of the flower is to be made a gala event that will probably be observed on May Day. According to plans, a holiday will be proclaimed and the school children of the city marshaled together to welcome the naturalist. It is thought that the dahlia will be placed in City Hall Plaza, a public park which it is proposed to make symbolic of the city. Some of the other towns throughout the United States bearing the name of Oakland have made known their desire of contributing oak trees to this municipal garden. It has been suggested in Oakland that bulbs of the city's official flower, the new white dahlia, be presented to the sister towns in return as a mark of appreciation for their friendly gifts.

⌈The construction of another government wireless station connecting the United States with its insular possessions, has been completed at Tutuila, placing the Samoan Islands in direct communication with Honolulu.

ARMY RECRUITING OFFICERS USE SPECTACULAR METHOD IN CAMPAIGNING FOR ENLISTMENTS AT CHICAGO

DRIVING a mechanical horse through the streets of Chicago to attract "fighting men" to the army recruiting stations: The powerful tractor, to which a field gun and caisson were hitched, was controlled entirely by two reins in the hands of a driver. It was taken through the congested "loop-district" thoroughfares with perfect ease. The plan was employed daily for a fortnight and apparently netted good results, for during the period large numbers of volunteers filed into the recruiting places. Although still little known, the machine is not a new type. Primarily it is intended for agricultural purposes and as a farm tractor has previously been described in this magazine. It is sufficiently striking in appearance and operation, however, to prick the curiosity of the street crowds, and in this capacity it performed valuable work for the army.

PREPARING FOR EVENTUALITIES AFTER BREAK

IN MANY OF OUR LARGE CITIES the Patriotic Spirit Shown by Women of Late has Amounted to More than Idle Conversation, as is Incompletely Indicated by the Picture Above, Which Shows Members of the Women's Reserve Drilling on the Roof of a New York Hotel

Immediately Following the Severance of Diplomatic Relations with the German Empire, the New York Naval Militia was Called Out to Guard the City's Bridges and Water-Supply System against Possible Molestation. Among the Men Who have Thus Faced Stinging, Snow-Laden Winds to Protect Gotham Property are Members of Some of the City's Wealthiest and Most Prominent Families. The Photograph Below Shows Some of the Militiamen and a Three-Inch Gun Stationed by the Williamsburg Bridge on the Manhattan Side

PHOTO COURTESY INTERNATIONAL FARM SERVICE

The German Steamer "Liebenfels" Awash in Charleston Harbor. The Sinking of the Vessel, Which had been Held in Port since the Outbreak of European Hostilities, Occurred When It Became Self-Evident That Washington would Break Off Relations with Berlin. There Seems to Be Little Doubt That the Boat was Scuttled by the Captain in Compliance with Orders Issued by the German Admiralty. The Engines of Several German Vessels at New York and Other Ports were Disabled by Their Crews

Motor Cars and Other Vehicles can Now Proceed from Portland, Oregon, across the Columbia River. Planning, an Interstate Bridge has been Erected to Span the Waterway That Separates the Two States.

AIR PROPELLER PUSHES ICE CAR AT SPEEDY CLIP

3967 Twenty-five miles an hour is easily attained with a motor-driven ice car that is used by a New Jersey devotee of winter sports. The vehicle is a stanch, simply designed sled carried on three runners, one of which is situated at the front and controlled by a steering wheel mounted under the streamline hood that partly shields the driver from the wind. A two-cylinder motorcycle engine, mounted at the rear, turns an aerial propeller. On the smooth surface of a frozen lake or river, the sled is in its element. Well-beaten snow-covered roads are also open to it, but, as is obvious, the fastest and most invigorating "bobbing" is to be had on the ice.

Few Winter Sports, Aside from Good Coasting, Offer More Really Enjoyable or Invigorating Recreation than Motor Sledding with Some Vehicle Like This

3973 **GROWS RAPIDLY**
Commerce Report 2/20/17 12693

Recent official statistics show that the growth of the toymaking industry in the United States since the grandfathers of the present generation were children has been remarkable. While the population has grown but 219 per cent since 1859, the per-capita expenditure for toys has increased by 1,165 per cent. The toy factories have increased in number from only 12 in 1859 to 290 in 1914—the year of the latest returns—and the annual output has increased in value from \$184,000 to \$13,757,000. In 1859 nearly twice as many toys were imported as those of domestic make; 20 years later we were making twice as many as we imported. In 1914 the output of American toys was 1.6 times greater than the toy imports, and since the European war began the proportion of domestic toys in the market has steadily increased.

3966 GREAT COLUMBIA RIVER BRIDGE IS COMPLETED

Within recent weeks the long-needed interstate bridge, spanning the Columbia River and connecting Washington and Oregon, has been opened. Erected at a cost of about \$1,750,000, it replaces a legendary natural bridge of Indian lore and establishes the first artery, other than a ferry system, for general vehicular traffic between Vancouver and Portland. The bridge proper is

to Vancouver, Washington, without Making a Long Detour or Employing a Ferryboat. After Years of and Has of Late been Opened. It Is the Only Structure in the Vicinity That Accommodates General Traffic

3,530 ft. long, but including the approaches it has a length of nearly four and a half miles. Bridging the main channel of the stream there is a 275-ft. lift span that provides a clearance of 150 ft. above ordinary high water.

ADULTS AT PALM BEACH RACE IN BOYS' MOTOR CARS

Almost every adult possesses a fondness for toys and playthings of a mechanical nature and if given an opportunity will operate them as enthusiastically as any boy—a fact which one of the present season's fads at Palm Beach has quite thoroughly demonstrated. A country club at this famous Florida resort has been the scene of

most amusing motor-car races, the "racers" used being the same as described on the children's page of Popular Mechanics Magazine recently. These little cars, which are built for boys and girls, are each propelled by a motor wheel attached to the rear. The contests were held on the seashore, and the drivers, who included some of the best-known men and women in Palm Beach's social set, were able to make quite surprising speed records.

SOLDIERS GIVEN COMPASSES OF LIQUID TYPE

Knowledge Dec 1916

During the European war large numbers of liquid compasses have been manufactured as pocket instruments for army officers. Although the type has long been a common one, its adaptation to this form is in a certain degree interesting. As might be expected, the reason for using the liquid compass, in preference to the sort in which the card is held solely on a pivot, is that the dial ceases its oscillations and comes to rest more quickly than in the latter instrument.

FLORIDA WHARVES HAVE NOVEL BULKHEAD

The new wharves at Commodore Point, Jacksonville, Fla., work on which was begun more than a year ago, are provided with a concrete and steel bulkhead wall of a type which has been little used heretofore. This bulkhead is part of a terminal situated at a bend in the St. John's River, and extends out some distance from shore. By filling in behind it the terminal's area is enlarged by several acres. The wall, which is a mile or more in length, is provided with steel I-beams driven at intervals of 3 ft. to a depth of 34 ft. or more below low tide, in most instances penetrating rock. Fastened

back of these supports is a continuous interlocked row of steel sheet piling. Concrete is filled in between the I-beams, so that all the steel except the outer edge of the I-shaped posts is protected from the salt water. The concrete facing, while designed primarily as a protection, naturally adds strength to the wall. Extending between the I-beams, and also incased in the concrete, are wales connected by tie-rods to piles several feet to the rear. Just back of the wall also is a relieving platform, supported by piles, which was installed before the filling was completed. This big new terminal is privately owned and is only a short distance from the city's shipping center.

There are scarcely enough houses to go around in some Scandinavian cities at present because the shortage of building material has halted construction work, and the population has been greatly increased by foreigners seeking refuge in neutral territory.

GEARLESS ELECTRIC MOTOR OPERATES PHONOGRAPH

In a new slow-running electric motor that has been designed for operating phonographs, the armature

This Illustrates the Combined Turntable and Armature, an Arrangement That Permits Smooth Motion and Obviates Gearing

is a part of the turntable. This arrangement permits the latter to be of much heavier construction than is customary and also obviates the need of gears. Power is applied magnetically, and the turntable is driven with the smooth, steady motion that is characteristic of a flywheel. A constant speed is maintained, irrespective of loads and voltages, by means of an electric governor that is used in place

of the ordinary friction-brake governor. Because the motor consumes only a small amount of current it may be driven satisfactorily by a five-cell battery which under ordinary conditions will permit the playing of 1,500 or more records, it is said. The motor is so built that it is practically interchangeable with a spring motor of any standard make.

3814

MODERN "BEN HUR" DRAWN BY FOUR MOTORCYCLES

Clad in a Roman toga and swinging a long-lashed whip, an impersonator of Ben Hur was drawn through the streets of Pasadena recently in a chariot of Roman design, but four motorcycles with riders, instead of fleet horses, drew the conveyance. The novel conception proved one of the hits of the rose tournament of which it was a part. The chariot and motorcycles were artistically decorated with flowers and greenery, and above the head of each costumed rider of the two-wheel power vehicles extended an arch of green. In spite of the slow pace of the procession—two miles an hour—the machines kept their place without difficulty.

Unique Float in the Recent Pasadena Tournament of Roses in Which "Ben Hur" and His Roman Chariot were Drawn by Four Decorated Motorcycles with Costumed Riders

The Ceiling Bed can be installed in Any Room, Sun Parlor, or Sleeping Porch and be Entirely Concealed from View at All Times Except When It is Lowered for Use

When the Bed is Lowered, as Shown Herewith, the Space It Occupies in the Ceiling is Covered by a False Panel Which Drops into Place Automatically

DISAPPEARING BED HIDDEN IN CEILING OF ROOM

For those who own small bungalows or cottages which lack guest rooms, some form of disappearing bed usually is convenient when emergencies arise. Certain advantages are apparently to be found in one which is hidden in the ceiling of a room when it is not in actual use. This arrangement does not usurp wall, closet, or floor space. Two false panels are employed, so that the place of concealment is always covered. When the bed is lowered to the floor one of these panels descends and seals the opening. The other one, which is held below the bed, fits into place when the latter is raised. The bed is held in a box installed between the ceiling and the floor above. Cables attached to its four corners pass around pulleys mounted in the retaining box, extend through channels cut in the joists, and are made fast to a winding drum fitted in one of the side walls. Access to this is given by a small, neat door and by turning a crank the bed is raised or lowered into position. Either of these operations requires but a moment's time and can be accomplished without any material physical exertion.

The Illustration Above Shows How the Bed Fits into a Receiving Box Fitted in the Ceiling. While Diagram at Right Explains the Arrangement of the Cables and the Location of the Winding Drum

FINGER-TIP LIGHTS FOR THEATER USHERS

With a small electric battery and connections to light bulbs worn on the finger tips, an usher in a darkened theater or hall may now signal to a door-keeper the number of empty seats available, so that the proper number of persons may be admitted to fill them. This device, recently patented, saves walking to and from the door to carry the message and conduct the persons admitted to the distant seats. It also saves considerable time in seating an audience.

HAND BAG SHELTERS LAP DOG FROM COLD

COPYRIGHT,
UNDERWOOD &
UNDERWOOD

Hand bags for lap dogs are among the very latest accessories devised for the amusement of society folk and the comfort of their pets. The extremely cold winter weather of a few weeks ago even chilled Florida air for a time, and forced the Palm Beach colony to don garments not altogether summerlike. At the same time some went so far as to shelter their pugnosed little lap dogs in spacious hand bags.

3986

INCREASING BUSINESS OF THE PATENT OFFICE

The business of the Patent Office during the year 1916 was greater than in any previous calendar year of its existence. From the report of the Commissioner of Patents, recently submitted to Congress, it appears that the total number of patents issued during the year ended December 31, including designs and reissues, was 45,927. The cash receipts from all sources amounted to \$2,343,540.94 and the expenditures to \$2,115,367.91, leaving a surplus for the year of \$228,173.03, which was deposited in the U. S. Treasury and increased the total net earnings of the Patent Office since the year 1836 to \$8,013,679.51. There were 71,033 applications for patents filed during 1916, and 33,296 patents expired. The applications allowed num-

bered 19,835, and 11,174 were forfeited for nonpayment of final fees. The grand total of patents granted since 1836, when the present series of patent numbers began, was 1,166,419; design patents 48,358, and reissues 14,040. The patents granted to residents of foreign countries in 1916 numbered 3,767, of which Great Britain and her colonies were credited with 1,882, Germany with 847, France with 309, Switzerland with 132, and Sweden with 114. The average time that applications upon which patents are granted remain in the Patent Office before final action is 21 months. A total of 117,298 applications were in the office December 31, pending action.

SKIRT WITH LEGGINGS FOR OUTDOOR WOMEN

COPYRIGHT,
UNDERWOOD &
UNDERWOOD

A one-piece combination of skirt and leggings is now available for women who are fond of hiking, or any form of outdoor sport in which freedom of movement is desired. The new garment is both modest and attractive. The leggings have gaiter straps and button on the outside almost to the knee. For riding, driving, golf, tennis, and other active

sports, the combination is pronounced just the thing.

Tramways, lake barges, and caterpillar tractors were employed in turn in transporting cement to two remote dam sites in the Sierra Nevada Mountains recently, bringing the cost of the material up to \$7.50 per barrel.

WHERE SPRINGTIME DRAWS DENVER GOLFERS

In the Attractive Home Above, the Denver Country Club, which is actively affiliated with the United States Golf Association, is host the year around in gay affairs. The 18-hole course, one of the best in the West, has an exceptionally baffling hazard before the fourteenth green. As is shown at the left, the famous Cherry Creek, with menacing trees on either bank, must be crossed obliquely.

The hospitable atmosphere of real country life is to be found at the Lakewood Country Club, where many of Denver's devotees of golf spend delightful hours on the course and about the clubhouse. There are spacious verandas and inviting lounging rooms with cheery big fireplaces that glow with fellowship when the air is crisp. On the links, before the seventh hole, a sporty hazard is met. The green cannot be seen from the tee, for it is on the opposite high bank of the stream pictured to the right.

WOUNDED WAR DOG FITTED WITH WOODEN LEG

Within recent weeks a crippled survivor of the battle of the Aisne has reached America. He is a war dog and

The Dog Limp When He Walks or Runs, but is Not Seriously Hampered in His Movements

wears an artificial limb. The animal was used in the French army and wounded by shrapnel while carrying a dispatch to the first-line trench during the opening hours of the great onslaught. With his left foreleg torn away, the dog struggled ahead and carried out his orders. At about the same time the animal's master was wounded. Subsequently, however, he got possession of the dog and had an artificial limb made for him at Paris. A silver cap was used to incase and protect the stump, and this in turn was fitted into the aluminum-lined socket in the top of the peg leg. A strap attached to the limb and fastened about the animal's body keeps the wooden member in place.

SIMPLE MACHINE RECOVERS TIN FROM OLD CANS

In view of the prevailing high cost of tin, some importance is attributed to an apparatus developed in England for recovering this metal and solder from used cans. It is composed of an inclined cylinder that revolves in a brick-lined one and is heated by a series of oil or gas burners. These are arranged so that from the upper to the lower ends of the drum the temperature gradually increases. The machine is continuous in operation, cans being fed by a hopper into the high end of the cylinder and discharged at the opposite extremity through a chute. The molten tin and solder flow through channels that carry them out of the chamber.

CHAUFFEUR'S ODD METHOD OF KEEPING WARM

There are queer ways of doing everything, and among them is the way an Iowa physician's chauffeur keeps himself warm during zero weather while the doctor calls upon rural patients. No mention has been made of the inhospitality of Iowa farmers, but for some reason this particular driver has the habit of throwing a fur robe over his body and curling up on the rounded top of the motor-car hood, there to absorb the heat radiated by the engine. There is no reason for doubting that he keeps fairly warm, but there possibly is cause to question his comfort.

During Cold Weather This Chauffeur Rests on the Warm Hood of the Motor Car When Long Stops are Made

John I.H. Hall

ST. PAUL FOLKS AGAIN FROLIC IN THE SNOW

LIKE New Orleans' Mardi Gras, St. Paul's winter carnival is becoming a picturesque and rejuvenating festival. Singularly these two gala events are held respectively at the headwaters and the mouth of the Mississippi. The photograph reproduced herewith was taken a few weeks past when St. Paul's gayeties were at their height. It shows a throng of several thousand devotees of the outdoors costumed and passing in review before the king of the carnival.

3807

MAGNETO OF CIRCULAR TYPE FOR GAS ENGINES

In a stationary gas engine of recent design the magneto used is of a new circular type, applied directly to the crankshaft, inside of the flywheel. There are no special gears, brackets, or other fixtures, as with the ordinary horseshoe magneto, and being of the high-tension type it requires only one cable to the spark plug. The timing of the spark is accomplished by rotating the magneto, which, being entirely inclosed, is claimed to be oil-proof, dust-proof, and rain-proof, while its location on the engine protects it against accidental knocks or breakage. The engine, it

is said, starts readily on this magneto, which the designers assert is both positive and durable, giving a good hot spark that can be depended upon. While no battery or spark coil is required, the new magneto can be used

Gas Engine with New Circular Type of Magneto, Which may be Seen Mounted on the Crankshaft Inside of the Flywheel

with batteries in a dual system of ignition.

DEATH'S-HEAD AND HUMOR MAKE SIGNS EFFECTIVE

Originality and grim humor have been displayed by a county-road engineer in designing signs for a link of

MAGNET USED TO OVERCOME VIBRATION OF MERCURY

Frequently it is highly important that the mercury contained in certain scientific instruments such, for in-

stance, as a barometer, be restrained from vibrating when subjected to some disturbing force. If the support of the vessel shakes slightly, small ripples occur on the surface of the liquid and often cause trouble when accurate observations are required. A physicist connected with the Bureau of Standards at Washington has found that such disturbances, as well as greater ones involving the whole of the mercury, can be largely, or entirely, overcome by subjecting the element to a strong magnetic field. The direction of the latter, it has been found, should be at about right angles to that of the motion of the quicksilver. The movement of the liquid across the magnetic lines of force has a ten-

dency to develop an electric current, and the resulting reaction has the effect of stopping the motion of the mercury. This method may be used when it is wished to obtain accurate adjustments of mercury surfaces at sea and elsewhere.

Two Signs on a Section of the Southern National Highway near Asheville, North Carolina, Which Strikingly Set Forth the Rules and Dangers of the Road

the Southern National Highway, not far from Asheville, N. C. At one curve in the fine asphalt-concrete thoroughfare is a boldly lettered notice which reads, "One Half of the Road Is Yours. The Other Half Mine." At another point in the same vicinity, near a sharp curve, is a board bearing a death's-head, below which are these words, "Just around Curve."

Because of the shortage of technically trained men for service in Russian munitions plants, 47 Russian women, formerly technical students, have been granted the degree of engineer and will serve in place of men.

NOVEL SPEED INDICATOR FOR STATIONARY RACERS

Exciting races, the participants in which sit on stationary bicycles, are held in the gymnasium of the Grand Rapids, Mich., Y. M. C. A., with the aid of a novel speed indicator. Two bicycles are each installed on a set of rollers which are connected by means

A Speed Indicator Which Makes Possible Exciting Races on Stationary Bicycles: The Two Toys Travel around Their "Half-Mile" Track Proportionately as Fast as the Contestants Operate Their Bicycles.

of speedometer devices with a miniature race track set in full view of the riders. Two toy bicycles, with riders, are mounted on this track and are connected with the speedometer attachments in such a way that the large bicycles drive them round the track. One trip of the toys around the course represents half a mile of bicycle riding. The fact that the speed of each tiny bicycle is governed by the rate at which the corresponding large bicycle is driven, gives all the zest of an outdoor race to the contests.

3472 ROOMY AIR-DRIVEN BOAT FOR TEXAS STREAMS

The problem of navigating a good-sized boat in the shallow streams of Texas timber lands has been solved by a river boatman of Deweyville, Tex. He has applied the aeroplane method of propulsion to a handy craft, 36 ft. long and 9 ft. beam, that draws only 8 in. of water and attains a speed of about 15 miles an hour under favorable conditions. An 8-ft. air propeller is mounted at the stern and driven by a

Builder—Capt. David G. Price, Deweyville, Tex.
for J. B. Smith, Beaumont, Tex.

6-cyl. gasoline motor in the canopied cockpit. There is a comfortable cabin and wheelhouse, and a gangway all around the deck. The boat was built for the use of a southern lumberman in visiting his camps along the streams, where a launch of greater draft could not be navigated.

3203

SMALL WINDMILLS USED BY HERRING FISHER

In fishing for herring on the California coast small hooks are baited with bits of bright-colored yarn, which

This Small Windmill is Used by the Fisherman to Keep Herring Bait Spinning in the Water, and He has Made Some Record Catches by Its Aid

must be kept moving in the water to attract the fish. An Ocean Park man grew tired of constantly jigging his lines by hand and now uses small wooden windmills, which answer the same purpose. There is usually a breeze at the piers where he fishes, and when connected to a fishline the mill spins merrily, keeping the baited hooks in motion until a fish is securely hooked, when its efforts to escape stop the mill, and the inventive fisherman does the rest. Nibbles have little or no effect on the windmill, so that there are few false alarms, and other fishermen are adopting the labor-saving system.

VEGETABLE-IVORY WASTE AS A STOCK FOOD

The feeding of sawdust to stock in the place of grain, which has often been the theme of jokers and comic supplements, may prove to be a practical proposition after all. But the sawdust to be employed as food will be of a particular kind, namely from vegetable-ivory nuts. This country imports about 10,000 tons of these nuts annually for use in making buttons. Now it is proposed to utilize the considerable waste, in the form of sawdust, chips, and turnings, that results from the making of buttons, by mixing it with grain for cattle. Experimenters for the Massachusetts Agricultural Experiment Station have found properly prepared vegetable ivory apparently quite suitable for such purposes, and stock fed on it seem to be benefited thereby.

3757

SALT TREATMENT FOR IRON FOUNDRY LADLES

By melting a small quantity of common salt in iron or steel ladles and spreading it over the inner surface, a Birmingham, Ala., inventor claims that the metal ladles can be used for melting copper or bronze, which usually requires expensive crucibles of graphite or some other material that will withstand intense heat. It is said that copper can be melted in a few minutes in an iron or steel crucible so treated with salt, whereas in common practice from one and a half to two hours are required. The salted metal crucibles can also be used for pouring the molten copper, as they are not affected by the fusing temperatures. The process has been patented.

A seaplane, attached to the aviation station at Pensacola, Fla., ascended to a height of 10,500 ft. recently, establishing a new altitude record for craft of that type. A flight to a height of 11,000 ft., made some months ago, was not officially acknowledged as a record.

SELF-LIBERATOR PERFORMS HANGING HEAD DOWNWARD

Not content with liberating himself from a strait-jacket in the way that tricksters ordinarily do, a vaudeville performer in Cincinnati not long ago performed this feat while hanging, head downward, from the side of a skyscraper. Clad in one of the garments used to restrain violent prisoners and with his feet tied to a heavy rope, he was swung out over the street far above several thousand spectators. After three minutes of effort, the gymnast had freed himself from the strait-jacket, despite the handicap of hanging by his feet at a nerve-racking elevation.

LOCAL MAGNETIC POLE IN ALASKA

Aling - See Press 12/23/16

In common with a few other places on the face of the earth, Treadwell Point, Alaska, claims distinction in that it is a local magnetic pole. It is one of those localities in which scientists have found that a dipping needle stands in an almost vertical position. The phenomenon is due to some local condition, such as a deposit of ore possessing strong magnetic properties. It is said that when observations were made at Treadwell Point, in 1900 and again in 1907, the dipping needle stood practically straight up and down, the north pole pointing toward the earth. When a compass was moved about in a circle of very small radius surrounding a certain spot, it was found that it reversed its direction. The compasses on ships in the channel, a mile distant, are said to be deflected about 11° by this area, which possesses exceptional magnetic properties. Treadwell Point is not far from Juneau.

United States Army Transport "Sumner" Aground on a Shoal off the New Jersey Coast, Broken in Two by the Winter Waves, and Abandoned by the Government as a Total Wreck

3897

GROUNDING ARMY TRANSPORT BREAKS IN TWO

When the army transport "Sumner" went aground on a shoal off Barnegat Light, N. J., early in the winter, hopes were entertained of saving it. The pounding of the winter storms, however, proved too much for it and it finally broke in two amidships. The machinery and much of the equipment being ruined, it was given up by the government as practically a total loss, further salvage operations being abandoned to the wrecking companies.

3800—full

WOODEN SHIP KNEES MADE FROM FIR STUMPS

Recent activity in building of wooden ships has revived an industry in the timbered regions of the West, in the furnishing of ship knees, the angular braces which are an important part of a hull. They are obtained from the stumps of large trees, at the angle where the trunk and the root meet. Douglas-fir stumps are said to yield the

finest and largest ship knees in the world, and as from 200 to 300 knees may be used in a single hull, there is a large demand for them among shipbuilders when their yards are busy. Most of the knees are required to have

POPULAR MECHANICS

FOOT REST OR GUARD FOR USE ON SHOVELS

Can. Pat. & Mar. Sept. 26, 1916

The labor of using a spade, or shovel, may be lightened considerably by the use of a foot rest, or guard, which

a resident of Spokane, Wash., has designed to fit over the upper edge of a shovel blade on either side of the handle. There is a broad guard surface on which the pressure of the foot is exerted and a resilient front portion to hold the guard in place on the shovel. It is a device that will be appreciated by amateur gardeners in the springtime.

OPEN-PIT IRON MINING LEAVES LAND TILLABLE

That open-pit mining, even in iron-bearing regions, need not convert the land into a desolate waste but can be so carried on as to leave the soil ready for the farmer, is demonstrated by the operations of an English company. Instead of leaving the earth in irregular barren heaps such as so often mark American open-pit digging, this concern replaced the dirt as fast as the ore was removed, and leveled off the top. The surface dirt was dug out to a depth of about 20 feet by a shovel which rested on the top of the vein. Immediately behind the shovel were workmen removing the ore, while in the bottom of the pit was a conveyor, within reach of the shovel, which received the surface dirt and carried it to the far side of the pit. Both machines moved forward in the same direction on tracks that were laid in front of them as fast as the digging progressed. The replaced earth was smoothed off ready for the planting so that in a short time it again became productive farm land.

3926

ARMY BAYONETS TO LOSE THEIR LUSTER

The comment has often been made that the great European conflict has destroyed all the glamour of war and now it may be added, speaking more literally, that modern war methods are removing all the luster and glitter from war equipment. Just as the gaudy uniforms have given way to those of dull color, so now the luster of bayonets is to be destroyed. The authorities of the United States Army have decided that a company of marching soldiers with shining steel blades on their rifles would be too easy a target for hostile airmen and long-range artillery. Consequently, all bayonets, including those of the militia, are to be "blued" by a special process.

MOTOR CAR TESTED BY A HURDLE JUMP

An unusual test of an automobile was made recently in Grant Park, Chicago, when a skillful driver sent his car full tilt down the speedway at a 14-in. sloping hurdle which caused it to jump a distance of slightly over 36 feet through the air. The feat was repeated three times without apparent injury to the car, which was powered with a 6-cyl. engine and weighed about 2,150 pounds. When the car hit the hurdle it was traveling at a speed of

50 miles an hour and the crash as it landed on the ground after each leap fairly terrified the spectators, who feared serious injury to both the car and its daring driver.

POWERFUL RADIO STATION FOR USE OF NAVY

The largest wireless-telegraph station in the western hemisphere placed in commission at Chollas Heights, near San Diego, Calif., a few weeks ago, when formal greetings were exchanged with the Navy Department at Washington, for whose use it is intended. The plant is capable of flashing messages to a distance of 12,000 miles. Immediately after the

opening, the operators talked with points in Alaska, the southern Pacific, and Australia, while messages were overheard from the British high-seas fleet in the North Sea, the high-powered German plant

at Nauen, near Berlin, and American ships along the Atlantic coast from Portland to Key West. The aerial equipment includes three 600-ft. towers, containing 500

tons of fabricated steel. They are placed 1,100 ft. apart in the form of a triangle and are triangular in section, 150 ft. at the base and 8 ft. at the apex. Huge porcelain insulators imbedded in concrete form the base of each leg. The aerial wires, or antennae, weigh 16 tons and sag 100 ft. between the towers; the generator weighs 60 tons, and the tuning coil is 14 ft. in diameter and 11 ft. in height. A government reservation of 72½ acres surrounds the station, with six commodious concrete buildings to house the power plant, operators, commanding officer, and guard.

3782 —

BIG STURGEON NETS LARGE SUM TO FISHERMEN

That the catching of big fish in Lake Erie is not entirely a thing of the past is proven by the fact that not long ago a crew of fishermen captured a huge sturgeon about a mile from the harbor of Port Bruce, Ont. The fish measured 7 ft. 6 in. and weighed 249 lb. Dressed, the meat sold for 30 cents per pound, or \$42 in all, while the 40 lb. of caviar brought the fortunate fishermen \$110. Some 20 or 30 years ago, when sturgeons of this size were not uncommon,

Two Views of a Sturgeon Caught Not Long Ago in Lake Erie, Which Weighed 249 Pounds, Was Seven and One-Half Feet Long, and Sold for \$152

Lang Fish Co.
Port Bruce, Ont.

a catch of this sort would have brought only a small fraction of the sum these men received. 3886

MANY OBTAIN SHOES LEFT BY DEPARTING SOLDIERS

Trade in secondhand shoes has been a thriving business in the vicinity of the army camps on the Mexican border since the return of our troops to their homes began. Many of the soldiers, on breaking up of camp, threw away extra pairs of shoes which they did not wish to be burdened with or had no adequate means of carrying. This attracted "shoe pickers" who came in great numbers, some of them in automobiles, and carried away hundreds of pairs of footwear. In many cases the shoes needed half-soleing, others needed stitching, while not a few were in excellent condition. These shoes retail for from \$1.50 to \$2, and consequently the collectors realized neat sums for their pains.

3917 —

OIL BATH FOR LUMBER HEATED ELECTRICALLY

An unusual use for electrical heating units is found in the equipment of a Chicago concern that employs them to heat oil in a tank in which lumber is treated. The container has a capacity of 100 gal. of oil and is heated by six 4,800-watt immersion heaters placed at the bottom of the reservoir. Any desired temperature can be maintained by means of an automatic temperature control. Heat economy is made possible by reason of an auxiliary tank placed above the main tank so that it absorbs the radiation. The outfit will permit the treatment of 15 timbers simultaneously. 1-13-17

Costly Overhead Lighting System of a New York Moving-Picture Studio: The Stage to be Lighted Below Is 170 Feet Long and 70 Feet Wide. The Groups of Mercury-Vapor Lamps are Moved on the Tracks Seen in the Photograph and Give Results Better than Daylight

**OVERHEAD LIGHTING SYSTEM
 IN MOVIE STUDIO**

A lighting system recently installed at an expense of \$50,000 in a large moving-picture studio in New York is said to be the most elaborate used in motion photography in the East. It comprises 25 overhead banks, or units, of mercury-vapor lights, each bank weighing 400 lb. They are movable on five tracks, each track having eleven contact spaces indicated by white paint. By shifting the lights a short distance either way, light is obtained for the deepest sets of scenery used in the studio. Contact is made by means of trolley arms. The entire weight of each bank of lights is supported by an overhead steel track, these tracks being 9 ft. apart and 170 ft. long. Each mercury-vapor unit consists of eight tubes, 56 in. long, and the weight being sustained by the hanger rail, there is no tension on the feed wires. The overhead lights are supplemented by a battery of similar units on the floor of the studio, which is also of remarkable size and power, so that when all the lights are in use a sort of superdaylight is produced, with fine results in photography. The actual taking of scenes is all done at night with these lights.

**SHOCK AND SOUND ABSORBER
 FOR TYPEWRITERS**

Sixty per cent of the noise made by typewriters can be eliminated, it is claimed, by the use of a device recently placed on the market. This is intended not only to absorb shock and sound, but also to provide an automatic means for attaching and detaching a typewriter to and from a desk. It includes a front and a rear absorber, the former being adjusted by lugs to the side plates of the typewriter, while the latter is furnished with cups in which the rubber feet at the rear of the machine rest. The absorbers then form a resilient bed for the machine, thus taking up the shocks of operation and decreasing the sound made. Provision is made for fastening them to the desk, so that the typewriter is securely held in one spot and "creeping" is prevented.

COMBINATION FERTILIZING AND SPRINKLING DEVICE

A garden-hose attachment now on the market provides a simple means for fertilizing or disinfecting flowers,

An Attachment for Garden Hose in Which is Inserted a Cartridge of Concentrated Fertilizer or Disinfectant That Slowly Dissolves in the Water. Tablets of Plant Food are Also Prepared for Use in a Sprinkling Can, as Shown in the Inset

shrubs, etc., that entirely does away with the task of pumping prepared liquids on plants to be protected or distributing bulky fertilizer by hand. The invention consists of a metal cylinder which attaches to the hose, either just behind the nozzle or next to the faucet. In this container is placed a cartridge composed of the material to be spread on the plants, in highly concentrated form. The flowing water gradually dissolves this compound and it is distributed with the spray. Fertilizer, nicotine insecticide, and other preparations, can be obtained in a form especially adapted for use in this attachment. Plant food can also be obtained in tablets designed to be dis-

solved in a sprinkling can, thus affording a simple means of fertilizing piazza plants and the like. The tablets can be inserted in the outer end of the spout if it has a screw top.

3726—

DUTCH FIND NEW WAY TO RECOVER FUEL IN ASHES

Commonwealth Sept 17/21-1916

In seeking ways to overcome the fuel shortage in Holland due to the war, a process has been devised in that country by which the combustible remnants left in furnace refuse can be recovered easily. It is said that this valuable waste often constitutes 20 per cent of the ashes and sometimes as high as 75 per cent. By the new method the refuse is ground up and then put through sieves of four different sizes. Each part is put into a separate basin containing liquid somewhat heavier than water, and the whole is stirred thoroughly. This causes the lighter particles, which are coke and unconsumed coal, to rise to the surface. When they have been scooped out and dried they make excellent fuel, while the heavier particles can be used, it is said, in making a fine grade of concrete. The liquid employed in the separating process is said to be inexpensive and a refuse product of factories.

ICE-SAWING OUTFIT WITH MOTOR ON A SLED

Harvesting ice is always a man's-size job, but it has become a comparatively easy task for a resident of Waterford, Me., since he designed and built an ice-sawing outfit with a motor-driven saw. On a substantial sled, capable of being pushed by hand, he mounted a light gasoline engine and a

circular saw, the latter being carried in front of the sled on a movable arm.

Cutting Ice with the Motor-Driven Saw: The Outfit is Easily Propelled by Hand and Raises a Cloud of Ice-Dust when at Work

This arm can be raised or lowered without disturbing the tension of a driving belt running from the engine pulley to the shaft of the saw; and the arm is extended at the rear to terminate in a push bar

IMPROVED MAGAZINE FOR MACHINE GUN

A private of a Pennsylvania regiment stationed at El Paso, Tex., has invented a magazine attachment for a ma-

Operating a Machine Gun with New Continuous-Feed Magazine: Above, the Assistant is Seen Feeding Cartridges into the Hopper; Should the Assistant be Wounded, One Man can Operate the Gun, as in the Lower Photograph.

chine gun, by the use of which the gun may be fired continuously. At present the cartridges are fed to the gun by an assistant operator, in strip magazines holding 47 cartridges each. With the new device, it is claimed, the delay caused by adjusting new magazines is avoided, and if necessary one operator can both load and fire the gun. The continuous-feed magazine is a steel hopper, 9 in. high, placed above the firing chamber of the gun. Loose cartridges are dumped into this hopper, just as they come from the ammunition cases, and are fed automatically into the firing chamber, the empty shells being ejected as at present.

SPAIN TO ESTABLISH NATIONAL PARKS

Commercial Appeal, n. t. p. 211

Spain has profited by the example of the United States and has recently enacted a law providing for the creation of national parks. At the time the proposal was under discussion, reference was made officially to the policy of our country in this matter, and the beauties of our national playgrounds were cited. This conservation movement was instituted by the king himself, who was much concerned because of the rapid disappearance of the national fauna, especially in the beautiful Sierra de Gredos. In fact he personally assumed protection of the central portion of that mountainous region, giving it his name and providing for its care. A commission was established which will seek to interest travelers by preserving picturesque and historic spots, and to assist the general public in becoming more familiar with their location and events connected with them.

3237—

ROTARY STUMP PULLER SAVES SHAVINGS

When a rotary stump puller recently tested in the South finishes its work upon a refractory stump, there is nothing left but a clean hole and a few sacks of shavings—sacked by the machine automatically while the stump is disappearing. The device is a huge machine which travels and operates under its own kerosene power and grinds the stump to shavings by a powerful steel-knived auger, taking from one to five minutes according to the size of the stump. It cuts down 18 in. below the surface, or 8 in. lower than is considered necessary for plowing, and the hole which it leaves is readily filled with surrounding earth. On the machine used for demonstration on cut-over lands in Louisiana the cutter head is 42 in. in diameter, built into a 40,000-lb. tractor. There are two sets of knives, one set shaving the outside of the stump at an angle of 52 degrees, the other set shaving out the inside at the point of the auger proper as it bores

MOVING HEAVY LOADS ON STEEL BALLS

An ingenious method was used in a foundry recently to move two huge cast-iron bins filled with sheet iron to the door of an annealing furnace. The bins when filled weigh several thousand pounds. Two shallow grooves, parallel and about three feet apart, were made in the concrete floor, alined with the furnace door, and connected with similar runways on the floor of the oven. Then each groove was filled with hard steel balls, 6 in. in diameter. A steel plate, 5 ft. wide and 10 ft. long, made with runways to match those on the floor, rests upon the balls. The

heavy cast-iron bins are then placed on this platform, and when the material to be heated is deposited in them, the heavy load can be rolled in either

Mayette Kan.

FOURTEEN-SIDED SILOS MADE OF TWO-BY-FOURS

Two silos on a large stock farm near Mayetta, Kan., are of special interest because of their shape and the fact that

they are made entirely of 2 by 4-in. beams in the same manner that grain bins are sometimes built, that is, by laying the scantlings on their sides and spiking them together. These big fodder containers are 14-sided, 26 ft. in diameter, and 44 ft. high, and have a combined capacity of over a thousand tons. They are supported by concrete foundations and are so heavy and so substantially built that no guy wires are required to steady them. The lumber, which is dovetailed at the corners, was all cut before the work of building was begun. The structures cost \$800 each. They have been standing two years and are pronounced very satisfactory.

Two Big Silos on a Kansas Farm, Each Having 14 Sides, Made Entirely of Two-by-Fours Laid on Their Sides and Spiked Together. They Have a Combined Capacity of 1,020 Tons

OSCILLATING SOLARIUM FOR TAKING SUN BATHS

An oscillating solarium has been built in southern California in which patients are given sun baths. This novel structure is 16 ft. long, 12 ft. wide, and is mounted on wheels which run on a circular track. By means of a lever it can be made to swing back and forth through an arc of 270° so as to face the sun all day long. The roof and the sunward side are composed chiefly of glass and the interior is divided into two rooms in each of which is a cabinet, 6 ft. long, in which the patients recline directly in the sun's rays. Shades are provided to modify the glare, if desired. After

proper exposure the patient is given a shower bath in warm water drawn from a solar heater situated on the roof. This device consists of a glass-covered case containing four tubes, 8 in. in diameter and 4 ft. long. In these

Solarium Mounted on a Circular Track so That It can be Made to Face the Sun All Day Long. In It Patients are Given Sun Baths Followed by Shower Baths in Sun-Heated Water

water will get so warm that it will steam when drawn off.

New Lecture Room, Massachusetts Institute of Technology: This Hall Seats 700 Students. At the Left Are Tracks for Bringing In Apparatus. The Insert Shows the Ventilating Chamber

LECTURE ROOM WITH NOVEL CONVENIENCES

3588
A hall for lectures, demonstrations, and meetings of all kinds, recently completed at the Massachusetts Institute of Technology, is supplied with unusual conveniences for both lecturers and students. It is built and finished in concrete and has a seating capacity of 700. The seats are of the folding type, with hat holders beneath them and notebook rests which swing up out of the way when not in use. On the rear wall is a service board which controls electric current, direct and alternating, in different voltages, and illuminating gas, with other supplies, like compressed air; while a water system is at hand for chemical work. A set of rails in the floor in front of the seats is used to bring in and remove table trucks on which apparatus and materials for demonstrations in chemistry, physics, or elec-

tricity may follow, one after another, for different classes. The tracks run out into preparation rooms, where the apparatus is made ready for use, and there is a turntable outside the hall by which the trucks may be switched as desired. Ventilation of the hall is effected through a large hermetically sealed chamber beneath the rising tiers of seats, from which fresh air of the right temperature is conducted gently to the classroom through "mushrooms" placed under the seats.

OLD HOUSE MOVED ACROSS BRIDGE OVER RAILWAY

3373
The residents of Middleboro, Mass. recently had the unusual experience of seeing a large old-fashioned dwelling moved across a bridge which spans a railroad right of way in that town. The structure, which was 75 years old, was to be moved to a new site and the only available route was over this

*#Hess, H. & Davis, Jr.
159 Portland Ave.
Middleboro, Mass.*

bridge. The house was too wide to be transferred all at one time and so it

the numerals from 1 to 20 distributed about its outer margin. In addition to

One of Three Sections of a 75-Year-Old Dwelling in Middleboro, Massachusetts, being Moved to a New Site

was cut into three sections, one of which is shown in the accompanying illustration. These sections were moved separately and reassembled at the new site.

Los Angeles

the sides only. The closed compartment is reached through double doors from the open division and has seats for 10. There are also seats for three persons beside the driver. The bus has a 25-hp. engine and is capable of 20 miles an hour. Baggage can be carried in racks on the top.

HOUSE BUILT OF QUARTZ —RICH IN MINERALS

Probably the only house in existence that is built entirely of rich mineral-bearing quartz is situated at a spot known locally as Lovers' Roost, in the neighborhood of Butte, Mont. The rocks used in the structure are all honeycombed on the surface, showing where minerals have been washed out in the course of time, and experts

This House, Modeled after a Swiss Chalet, Contains a Large Quantity of the Precious Metals in the Quartz Rock of Its Walls and Foundation

estimate that there are still present in the rocks gold, silver, copper, zinc, and other metals to a value far more than double that of a similar house of ordinary building material.

ANTICOLLISION BUFFERS AND FENDERS FOR TRAINS

Special buffers and fenders are being used on certain trains on an English railway to reduce the shock of violent collisions and at the same time prevent one car from mounting up over another. Two buffers are placed at each end of a car, having broad, flat iron heads, behind which are heavy coil springs. Each buffer is provided with a supplementary coil spring which is not brought into play until the principal coil has been fully compressed. If the strength of the impact exceeds

the combined resistance of the two springs the bolts holding them in place will give way. It is in such an emer-

End and Side Views of Corrugated Fenders on English Train, Designed to Keep the Coaches in Alinement in Case of Collision, Thus Preventing Telescoping

gency that the fenders come into play. Each fender consists of a heavy metal guard, the face of which is marked by deep corrugations extending horizontally. One of these is placed above each buffer. When one coach crashes into another these corrugated fenders interlock and tend to keep the cars in alinement.

EIGHT-FOOT LIGHTED BALL ON TOLEDO SKYSCRAPER

A huge metal globe, studded with 800 nitrogen lamps, has been erected above a 21-story building in Toledo, and now serves as one of the most conspicuous landmarks in that city night and day. The sphere, 8 ft. in diameter, is mounted on an iron pole, steadied by several wire cables to help it withstand the fiercest gales. Current for the 50-watt lamps which cover it is controlled by a flasher that gives the ball the appearance of revolving on its axis. On a dark, clear night the sphere should be seen some 20 miles away.

POPULAR MECHANICS

TEETH FILED BY FILIPINOS FOR BEAUTY'S SAKE

Among the curious customs of the Philippine Islands one of the most peculiar is that of "beautifying" the

A Young Filipino having His Teeth Filed by a Bagobo Dentist, to Secure the "Beautiful" Effect Seen in the Photograph at the Right. The Patient's Mouth is Held Open by a Stick of Wood

teeth by filing and blackening them, which prevails among the Bagobos of Mindanao. Both boys and girls of this tribe undergo the filing process before marriage, and this usually occurs while they are still very young.

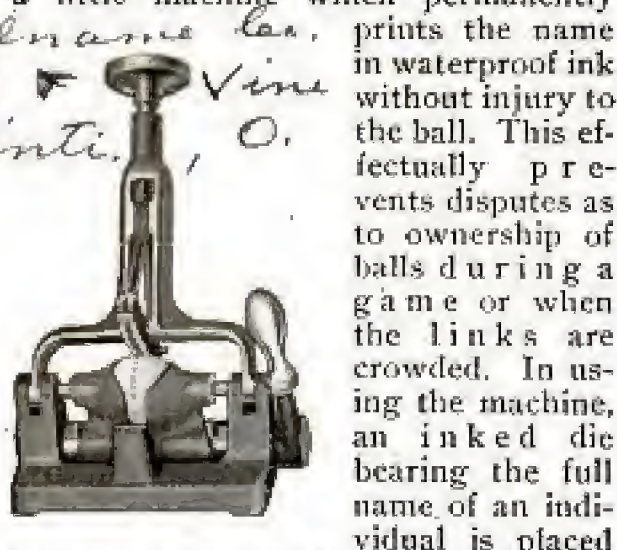

The youth who is to be thus decorated sits on the ground beside the native dentist, gripping between his teeth a stick of wood to keep his mouth open. The dentist then files each tooth down to a stump or else he cuts or breaks each to a

point, as preferred by the beauty-seeking patient. All that is left of the teeth is blackened by a powder secured from a certain native tree, and during the blackening process the patient is forbidden to drink water, cook or eat anything sour, or attend a funeral, lest his teeth retain their "ugly" whiteness or fail to blacken beautifully. The pain resulting from such mutilations is partly relieved by the juice of the betel nut, of which the Bagobos are inveterate chewers.

3637

GOLF-BALL MARKER PRINTS OWNER'S FULL NAME

Many players have their golf balls plainly marked with their full name by a little machine which permanently

prints the name in waterproof ink without injury to the ball. This effectually prevents disputes as to ownership of balls during a game or when the links are crowded. In using the machine, an inked die bearing the full name of an individual is placed

by means of a lever at the side. The die is then adjusted on the ball by a handwheel, and a forward movement of the arm holding the die prints the name.

SCRAP LEATHER USED IN ENGLAND TO MAKE SOLES

War prices for leather undoubtedly have been a factor in producing, in England, a patented method by which soles can be made from scrap leather. The new bottoms for shoes are described as nonslipping, waterproof, and costing less than the ordinary kind. One type of these soles is provided with rubber strips attached to a thin layer of canvas, and so arranged that the rubber fits in between the leather sections. This feature is said to lend pleasing resiliency to the sole. It is believed that the new process can be employed in heel building also.

THE WORLD'S LONGEST MAN HUNT

3664 suite 1 By FRANCIS J. DICKIE *Paranormal Apts., London, Ont.*

ON June 8, 1912, Harry V. Radford, noted arctic explorer of New York City, and his companion, Charles Street, were speared to death by a little band of Kilinonuit Eskimos in the lonely and desolate arctic region of northern Canada near to the shores of Bathurst Inlet, 60 miles from Point Barrow.

One year later a Chesterfield Inlet Eskimo, named Akulack, brought the story of the white men's murder to the Hudson's Bay Company's post at Chesterfield Inlet. Immediately upon receiving the news from the Eskimo, the factor, H. H. Hall, dispatched a messenger with all haste to the nearest mounted-police post at Nelson River. The story of the incident through which Radford and Street lost their lives is best summed up in his letter as supplied by the official mounted-police report of June 6, 1913. It is as follows:

"The Eskimo Akulack, who took the Radford party from Shultz Lake to Bathurst Inlet, reported to me on June 5th that both Mr. Radford and Mr. Street were murdered by Bathurst Inlet Eskimos. Cow-

Mock, Mr. Ford's Indian trader at Shultz Lake, brought down the news shortly before this, but as I seldom take any stock in Indian yarns, I placed very little confidence in it until I heard the story from Akulack. Both Mr. Ford and myself questioned him twice today, and his version of the story was practically the same as the one given us earlier by Cow-Mock. According to Akulack, he left Messrs. Radford and Street about June 5th last year near the shores of Bathurst Inlet, in company with a small tribe of Kilinonuit Eskimos. Everything seemed to be going fine then, and Radford was about to leave to connect with a whaling ship at Point Barrow.

Three days later Radford was about to make a start; in fact the Eskimo, supposed to go ahead, had started when the second Eskimo engaged for the trip backed out. Radford, to force obedience, struck him with the butt of his whip. A fight ensued and Radford was speared in the back. Mr. Street made a run for the sleigh, but by this time the rest of the members of the tribe, some thirty in number, had taken a hand, and he was also quickly speared to death. According to the story, as told to Akulack later by one of the natives, Nevelie, and by Akulack's father-in-law, Radford put up a game fight and had to be speared several times before he fell; and as life still lingered as he lay on the ground, he got the finishing touch from one of the women, who cut his throat with a seal knife. Akulack states

the reason the Eskimo backed out from the trip was that his wife had suddenly taken sick, and he did not wish to leave her just then. Radford, not understanding the Eskimo language, must have taken a wrong meaning and then tried to enforce obedience as above mentioned. Akulack named the principal murderers as Am-mo-ker-nic and Hull-larlack. There is one thing I can say, and that is Radford showed poor judgment when he tried to enforce obedience by striking an Eskimo when he was so outnumbered and far from civilization."

As quickly as boat and train could carry this report from the Nelson River

The Eskimo Talaruck and His Wife, Who Accompanied the Police Patrol. The Endurance and Fortitude of the Eskimo Women Equals That of the Men

post to headquarters at Regina, Saskatchewan, it came. And immediately upon its receipt, began preparations for sending a patrol of mounted police to capture and punish the murderers. That they might be anywhere in a vast loneliness, thousands of square miles in extent and icebound two-thirds of the year; that the trail was already more than 12 months old, and that not even a good description of the murderers was in their possession—all these things did not stop the mounted police. It is questionable if that phase of the situation was ever even thought of by them.

In the late summer of 1913 Inspector Beyts, Sergeant-Major Cochan, Corporal Conway, and two constables left the headquarters at Regina, to take up a man hunt that was to begin 3,000 miles away in one of the most hostile regions of the world. From Regina they traveled to Halifax, whence the steamer "Village Belle" was to carry them northeast into Hudson Bay.

The expedition was equipped with supplies for two years, and for 18 months the schooner was used as a base. From Halifax the "Village Belle" made a successful voyage until Cape Chitfield was reached. Here a gale was met with that buffeted the

boat for many days, carrying away her topmast. But the vessel rode out the storm and at last reached safety in Burwell Harbor on the extreme end of Labrador. From there on to Spearl Harbor, the stout little ship was many times in danger from ice floes and icebergs, barely escaping shipwreck on half a dozen occasions. The landing at Spearl Harbor was made late in September, 1914, too late to proceed farther inland. Here the expedition wintered and met Akulack, whose story has been already told.

As soon as conditions permitted, the party moved on to Chesterfield Inlet, which body of water extends far inland and, by means of several small rivers, permits easy access to an otherwise difficult and desolate interior by way of Baker and Shultz lakes, the territory in which the murderers of Radford and Street were somewhere wandering in that wilderness waste.

From Chesterfield the party pushed inland, in the spring of 1915, to Shultz Lake. Then the wilderness swallowed them up and the world heard no more of them until late in November, when word came out that they hoped soon to overtake the band after traveling over a thousand miles on the strength of the barest of clues furnished by friendly

The Mounted Police Patrol under Inspector Beyts Interviewing Friendly Natives near Shultz Lake as to the Whereabouts of Radford's Murderers in November, 1915

The Canadian Mounted Police: A Unique Photo Showing by the Variety of Costumes How Wide and Varied Is the Country and Weather This Remarkable Body of Men Cover. These Costumes Show Every Form of Uniform Worn from the American Boundary to the Country around the "End of the World," Far within the Arctic Region

Eskimos. Later again came another brief report to Regina, dated Thelon, February, 1916. At the eastern end of Baker Lake they had established a base post of this name. The immensity of the difficulties in this land can be glimpsed even in so brief and formal a thing as a mounted-police report.

According to this report a gasoline boat had been brought overland and by water to the lower end of Baker Lake. The work took up a great deal of time and it was not until late in the fall they were able to start across the lake in the launch, with three flatboats loaded to the gunwales being towed behind. The ice had already formed around the lake edges, but the outer water was still only thinly filmed, and through this the launch easily broke its way. But half-way across the lake the thermometer had dropped in the amazing manner of the country, and the film ice thickened so the launch could no longer proceed. The four boats were frozen in. Then

followed weeks of desperate labor, totting the provisions by dog train, and later the chopping clear and moving of the boats to Thelon.

However, though a diligent search covering all the spring and early summer of 1916 was carried on, success failed to attend their efforts. The murderers were still at large somewhere in that vast land. Certainly no chaser of the will-o'-the-wisp ever had any more difficult job than this sturdy band of mounted policemen.

Late in the summer, their time being up, they began the return trip to civilization; while, even as they moved back toward the land of soft beds and city things, another patrol of equal size under Inspector French was on its way to take their place and continue the search for these primitive lawbreakers. Although the hunt is moving on toward its fourth year, the mounted police still expect to make good their reputation for always "getting their man."

FLOOD-LIGHTING SYSTEM

AIDS AIRMEN AT NIGHT

Army & Navy Journal 1/20/17

The practice field, for use by the aviation section of the Signal Corps at Hempstead, N. Y., has been provided with 12 powerful flood-light projectors, which mark the area for those members of the section that are taking a course in night flying. The most conspicuous piece of equipment for this lighting system is a searchlight of 1,500,000 cp. which has an effective range of 8,000 yd. This powerful light is employed in "picking up" airmen as they fly over the field looking for a landing place. It also serves as a "lighthouse" for the "mariners of the sky." The great beacon was used for the first time last January.

TO BUILD MOTOR TOLL ROAD IN KANSAS

An old post-road act, which has not been taken advantage of for more than a generation, furnished the legal basis for the incorporation recently of a Kansas concern which proposes to build a motor toll road between Fort Scott and Pittsburg, Kan., a distance of some 30 miles. This company intends to maintain a freight and passenger service between the two points and will derive additional revenue by collecting tolls from motorists using the highway. The concern has the same right of eminent domain that a railway has.

STORE ENTRANCE REPLACED BY SHOW WINDOW AT NIGHT

One of the large window displays of a department store in Chicago, which is brilliantly lighted at night, disappears every morning as the hour approaches for opening the store, and a vestibuled entrance appears in its place. The show window is in reality an elevator cage, which is lowered each morning to the subbasement and raised again to the street level as soon as the store closes in the evening. As it rises it carries up with it the floor of the vestibule used by customers entering the store during the day. An adaptation of the same idea has been used in the East for some time.

Wide-Tired Truck, with Trailer, Which Makes a Smooth, Hard Track as It Goes. The Outfit is Equipped with a Winch Which is Used in Loading the Logs and in Emergencies en Route

3294

WIDE-TIRED TRUCKS MAKE OWN LOGGING ROADS

Powerful wide-tired trucks are now being used in logging regions in Oregon and Washington, which virtually make their own roads as they go. One type of these cars has front tires 10 in. wide, and back tires, 20 in. wide. An experienced driver carefully selects his course as he goes over a route for the first time and the weight of his machine makes a road as it moves along. A few trips over the same line of travel serve to make a hard, smooth surface which will withstand considerable bad weather. Four-wheeled trailers are often used with these trucks, as shown in the accompanying illustration. Two-wheeled trailers are also used. Many of the machines are equipped with a winch and cable by which the logs are drawn up to the loading place and thence onto the truck. This outfit is also employed occasionally to pull the truck out of a mire. The big cars travel from six to eight miles an hour and draw as heavy a load as six or eight horses. The saving of time is an item of prime importance, especially where the hauls are long as is often the case in the western forests.

CONDITION OF STEAM TRAP 2601 INDICATED BY GAUGE

To help a stationary engineer determine quickly and certainly whether a steam trap is operating properly, a simple thermo gauge has been devised. Such a trap, it will be understood, is an appliance that permits the passage of water of condensation out of pipes, engine cylinders, radiators, and the like, without allowing steam to escape. The gauge is tubular in form, made of brass, supplied with a series of flanges, and fitted at the top with a "try" cock. When the trap to which it is applied is working as it should, the radiator disks about the gauge are fairly cool. In case the former is leaking, however, steam coming in contact with the gauge causes the flanges to become extremely hot. Thus by placing a finger on one of the radiators an engineer learns whether a trap valve is tight or leaking.

Just a Place to Pause for a Moment When the Sun Is Hot, or the Moon Shimmering: A Rustic Seat Built of Gnarled Branches and Bamboo Sticks around a Big, Friendly Palm

Here Is a Bench That is Easily Constructed When Timber Is Available, but Also One That Usually Seems Out of Place Unless There Are Trees and Bushes Near at Hand. It Really Requires a Woodland Background

When in Its Proper Element amid Complementary Surroundings, the Classic Exedra Is Impressive. Interestingly, Too, It does Not Lose Its Conventionality When Modernized to the Extent of the One Pictured Above, Which Embellishes a Sun-Splashed Garden in California

When a Long, Solid Bench is Placed in an Alcove of a Garden Wall, an Atmosphere of Cloistered Privacy Is Created; and if Palms, Vines, and a Rough Brick, or Flagstone, Walk Also Enter into the Setting, a Tinge of Romance Is Added. The Final Touch Developing the Latter Element in the Picture Above Is Contributed by the Peephole That Gives a Glimpse Beyond

Not in Many Gardens does One Find a Place of Rest That Is so Pastoral in Its Suggestion as the One Sketched Above. It is Built of Rough Stones about an Inclined Tree and is Adorned with Ferns

Climbing Roses Cling to the Heavy Boulders and Entwine the Trelliswork of This Pergola, beneath Which, Back to Back, Are Two Benches. This Type of Outdoor Architecture Is Particularly Popular on the Pacific Coast

These Big Cement and Boulder Benches Border a Cinder Track on the Campus of the Boulder, Colorado, High School, and were Built by Members of the Student Body. Each of the Seats Is 10 Feet in Length and of Lasting Construction

The Trees, Shrubbery, and Vines, Contribute Much to the Beauty of This Wall, with Its Friendly Seat and Picturesque Gate, and Give It the Appearance of Simplicity and Wholesomeness Which is Always Admired. A Garden Wall Reflects Art and Taste, or the Lack of Them, Just as Intensely as Do the Interior Decorations of a Home

TINY CAR IS DOG'S SEAT ON AUTO RUNNING BOARD

A most unusual and elaborate seat for carrying a dog on the running

An Unusual Seat for a Motorist's Dog, Being a Miniature Reproduction of the Larger Car on Which It is Mounted

board of an automobile has been constructed with much ingenuity by a motorist in Los Angeles. It consists of

a miniature car reproducing, in almost every detail, the large motor car on the running board of which it is fastened. It is equipped with an engine having a fan, starter, spark plugs, cylinders, etc. Many of these parts were constructed from old clockworks. The engine is driven by power from dry cells located in the big car, and through the isinglass window in the tiny hood one can watch the engine running. Other parts which have been provided are a differential gear, a movable steering wheel, a spot light, clock, tail light, and windshield.

3613

AERIAL CABLE SAVES LONG HAUL FROM GRAVEL BED

An example of a profitable aerial tramway is to be found in the equipment installed by a contracting company in Casper, Wyo., to transport gravel from the north bank of the North River to the opposite side. If the material were transported by wagon instead of by cable it would have to be hauled along the farther shore for at least a mile before reaching a crossing. The bucket used with this outfit makes a round trip in about two and one-half minutes. The container has a capacity of 1 cu. yd. and travels on a 1½-in. wire cable. The crew which operates it consists of an engineer and a fireman.

Aerial Tramway That Transports Gravel across the North River in Wyoming, Thereby Saving a Two-Mile Haul with Wagons. The Bucket, Shown Above Discharging Its Contents into the Hopper, Makes the Round Trip in About Two and One-Half Minutes

When the Stars and Stripes Float below the Dutch Flag at the Commercial Club, Yankee Travelers Know That a Boat from Home has Docked at the Wharves

PARAMARIBO'S HOSPITALITY EXTENDED AT CLUB

Practically every one of any standing who arrives at Paramaribo, the capital of Dutch Guiana, is received at the Commercial Club and shown genuine hospitality. The institution is what its name implies, and more; it is the port's smartest resort. A large ball-room permits rather fashionable dances to be held twice weekly, while in other rooms globe trotters and international commercial representatives may meet, escape the heat of the afternoon sun, read the latest telegrams as they are posted, scan the New York market quotations, and practice with the cue. Architecturally the building, with its shuttered openings on all sides, is characteristic of the tropics, while its setting back of a well-trimmed hedge in the midst of a grove of palms is most inviting. It is constructed entirely of colonial hard woods.

A naval officer, whose position enables him to know, has predicted that improvements now being made in radio direction finders will soon permit operators accurately to locate the position of a vessel sending a wireless message.

REVOLVING CONE AIDS IN SORTING PACKAGES

Great facility in sorting addressed packages is obtained by means of revolving cones, two of which have been installed by an express company, one in New York and one in San Francisco. Bundles collected by the express drivers are delivered by a belt conveyor to the apex of this revolving distributor. As they fall upon its smooth sloping surface they quickly slip to its outer edge, whence each is transferred by one of a group of distributing clerks to the proper waybill and weighing employe, occupying one of the desks that encircle the device.

Revolving Cone Which Enables Express Clerks Rapidly to Distribute the Addressed Packages Dropped upon It, to the Proper Waybill Employe Seated at the Encircling Line of Desks

FISH BOWL ACTS AS LENS AND SETS BED AFIRE

The fact that a goldfish bowl in a St. Louis home recently acted as a sunglass and started a fire has given

A Goldfish Bowl so Placed in the Window of a St. Louis Home That It Acted as a Sunglass and Set the Bed Afire.

rise to considerable discussion in that city concerning the advisability of restricting the use of spherical aquariums. The transparent vessel was filled with water and stood in front of a window in the direct rays of the sun, which

were concentrated to a single point by the bowl. As the sun moved along its course this focal point fell upon the pillow of a bed, which stood near by, and set it afire. Fortunately the blaze was discovered before serious damage was done. The accident is not an unusual one.

FARMERS TILL RAILROAD'S RIGHT OF WAY

A very practical conservation movement has been undertaken by the Chicago, Burlington and Quincy Railroad by inducing farmers along its right of way to cultivate the railroad's land adjoining their farms. Over 600 country dwellers took advantage of this plan last year, paying the nominal fee of \$5, which entitles them to utilize the land adjoining theirs for an indefinite period. This soil, which is usually very rich because so long untilled, is planted to alfalfa and the yield has been as high as eight tons to the acre. The average amount of land which each man cultivates is three acres. The arrangement lessens the weed menace for the near-by fields and, since alfalfa remains green a long time, it lessens the danger of prairie fires. At the same time the road is saved the cost of mowing the right of way.

Utilizing the Railroad's Land: A View of a Newly Mown Alfalfa Crop Which Illustrates What Several Hundred Farmers, Whose Land Adjoins the Burlington Railroad's Right of Way, have Done under That Road's Direction

BEAR THAT KILLED A MAN BLOWN TO PIECES

A bear that had severely mauled a government teamster in Yellowstone

National Park was blown to pieces by dynamite recently, while the teamster died from his injuries in the Military Hospital at Mammoth Hot Springs. The man was asleep under a supply wagon in the park when he was attacked by the bear. Two companions drove the animal away, after serious injuries had been inflicted on their mate, and when the latter had been removed to the hospital they prepared a warm reception for the bear, knowing it would return. Dynamite, connected with a small electric battery, was placed under a bait of

army bacon a short distance from camp. When the bear came back under cover of darkness and nosed the bait, the mine was sprung and the dynamite did its work most effectively. Bruin

When a Bear Fatally Mauled a Teamster in Yellowstone Park, His Companions Set a Trap with Dynamite and Blew the Bear to Pieces

disappeared in sections, and the unlucky teamster was avenged.

disappeared in sections, and the unlucky teamster was avenged.

3598

AUTOMATIC BOOKKEEPING BY CASH REGISTER

A business appliance lately placed on the market in Kansas City, Mo., combines the functions of a credit register, an adding machine, and a cash register. It was designed for the use of retail merchants, but can be adapted to any business in which credit is extended. The keyboard comprises means for recording credit sales, cash sales, receipts and payments of money, invoices, and additional details of the day's business. Above the keyboard is a credit division, containing numerous trays with records of customers' accounts. These trays, as well as the cash drawer, are

locked, making it necessary for a clerk to identify himself by depressing his allotted initial, or number, key, before he can gain access to either. A permanent printed record of each transaction is made by the machine, as the

This Bookkeeping Register Keeps Credit Accounts Straight and Also Does Duty as a Cash Register and Adding Machine. Trays above Keyboard Contain Records of Accounts

appropriate keys are depressed. In case of a credit sale, the original sales

*Automatic Bookkeeping Register Co.,
18th & Wyandotte Sts., Kansas City,*

ticket, including the amount of previous purchases brought forward, is filed in the credit tray containing the customer's account. Each of the removable sections holds 25 credit accounts. At the close of the day the machine records the totals for all the various kinds of transactions.

3162

SPEED HOUSE BOAT IS BUILT ON HYDROPLANE LINES

Radical departure from conventional designing is found in a new 50-ft. speed house boat that was launched in the East before the close of the past season. The craft throughout is of very light construction and interesting arrangement, and has splendid accommodations. One of the surprising things about it is that it is built upon the expanded lines of a hydroplane. With a 12-ft. beam it carries enough freeboard to give a 6-ft. 3-in. clearance, and has a

regular ship's deck, which is roomy and comfortable. In all, the vessel has 45 separate windows which provide abundant light and ventilation below deck. A four-cylinder, 80-hp. engine drives a single propeller, and under way the vessel has a draft of only 27 in. The accommodations comprise a galley, cabin, three single staterooms, a toilet, and a large double stateroom at the stern. The galley is equipped with a four-burner alcohol range and a table 6 ft. 3 in. long, with shelves fitted beneath. In case of necessity this can be converted into a bunk. A large sink and refrigerator, the latter built so that it can be readily moved, are provided on the port side. Provisions and ice can be lowered through a hatch that also enables members of the crew to reach the galley without passing through the cabin. The craft has received much favorable comment from some of the enthusiasts who have seen it.

The Cabin Is of Good Size and Convenient Arrangement. In an Emergency It can be Converted Quickly into a Sleeping Room

A floating dry dock, capable of handling the largest merchant vessels on the Pacific today, is to be built in Vancouver, with government aid.

At the Stern of the Boat There Is This Commodious Double Stateroom. It is Supplied with Nine Windows Which Furnish an Abundance of Light and Air

The House Boat Has Surprising Accommodations and Embodies Refinements in Design and Construction
Inventor: Which Make for Speed. Throughout, It Is Unusual and Interesting

Cipriano A. ... Jr., 116 Nassau, N.Y.C.

3257 WORLD'S GREATEST TELESCOPE AT MOUNT WILSON

WORK on the 100-in. reflecting telescope at the Mount Wilson observatory, Pasadena, Calif., is approaching the final stage, and within a few months, possibly by July, will be completed. During the 10 years spent in designing and constructing it, much technical interest and popular misunderstanding have arisen. The instrument will be the largest stellar camera in existence and will collect twice as much light as any other telescope. From a scientific viewpoint it is an experiment in certain respects. But for the measurement of the heat radiation of stars and the spectroscopic study of the faintest objects it will yield results commensurate with its size, according to George Ellery Hale, director of the observatory. The instrument, contrary to the impression held by some, is not designed to settle the question regarding the canals of Mars. There is reason for hoping, however, that it will extend the visual boundaries of the universe by making possible the photographing of many millions of stars existing beyond the range of the most powerful telescopes in present use.

Primarily the new instrument will be employed in continuing astronomical investigations that have been undertaken with the 60-in. reflector at Mount Wilson. To be accomplished are the extension of studies now in progress on the structure of the universe and the evolution of the stars. The nature of nebulae and star clusters, the distances of stars and their motions in streams, the question whether light is scattered in its passage through space, and the matter of the dependency of a star's redness upon its physical condition, are, with innumerable other things, subjects which the power of the new reflector may help to determine and clarify.

Although its moving parts weigh about 100 tons, the big telescope is far more delicate than any watch ever made. Every part of its mechanism is as nearly perfect as human skill will

permit. The reflector, which is 101 in. in diameter, 13 in. thick, and $4\frac{1}{2}$ tons in weight, has been ground from a block of glass cast at St. Gobain, France, in 1906. The disk was produced following several failures and accepted after being given a spherical surface and tested under various conditions of temperature and in different positions to determine the constancy of its surface. Subsequently the final grinding of the disk to a parabolic surface was undertaken and completed by the expert in charge of optics at Mount Wilson observatory. This work, requiring minute precision, made necessary the development of special grinding and polishing machinery and the originating of special processes. In addition to this major reflector, the telescope will be supplied with four smaller auxiliary mirrors.

The tube is about 12 ft. in diameter and 45 ft. long. This and other parts of the telescope's mounting and operating mechanism is being set up within a housing that is 100 ft. in diameter and 100 ft. high, the upper half of it being a dome. The latter is rotated by an electric motor on rails which have been ground so true that motion along them is smooth and perfect. This was imperative in order to avoid the possibility of vibrations being set up within a large fixed spectroscope occasionally to be employed with the telescope. The heavier parts of the instrument's mounting were built at an eastern shipyard, but all of the smaller parts, requiring great accuracy in fitting, were constructed in the instrument shop of the observatory by its own experts.

The dome and building housing the instrument are constructed so that no air can enter when the shutter opening is closed. This precaution and the use of refrigeration machinery are necessary to prevent changes in the shape of the mirror through temperature variations. The mirror is held in a steel housing which is insulated with felt and cork.

Dome Erected at Summit of Mount Wilson to House the World's Greatest Telescope, the 100-Inch Reflector That is Now Nearing Completion after Ten Years of Unceasing Work. The Dome, Strictly Speaking, is Only the Upper Half of the Structure and Revolves on a Track That has been Ground True to Insure Smooth Motion

This Gives a Close View of the Base of the Tube Loaded on the Truck. When Almost at the Top of the Mountain, the Great Weight of the Machine and its Burden Caused the Outer Edge of the Road to Crumble at a Curve. One Wheel Slipped over the Brink of a Precipice and the Truck Tilted to a Dangerous Degree, but did Not Tip Over. Had the Machine Rolled down the Mountain it would have Taken Many Months to Replace the Loss

Carrying the Massive Base of the Telescope Tube up the Steep, Hazardous Road That Winds for Nine Miles up Mount Wilson to the Summit, Overlooking Pasadena. This Section of the Steelwork Weighs 15,000 Pounds and, Like Certain Other Parts of the Instrument, Proved a Difficult Thing to Handle. It was Built at an Eastern Shipyard and Transported to California by Water. It was Then Placed on a Motor Truck and Hauled up a Road That Has a Grade Ranging from 10 to 18 Per Cent

Here is a Picture That Not Only Illustrates a Remarkable Motor-Truck Performance but Also Explains Some of the Difficulties Encountered in Carting the Telescope's Parts to the Mountain Top: It Shows a 10-Ton Girder being Carried around One of the Many Sharp Turns in the Steep Road Scaling Mount Wilson

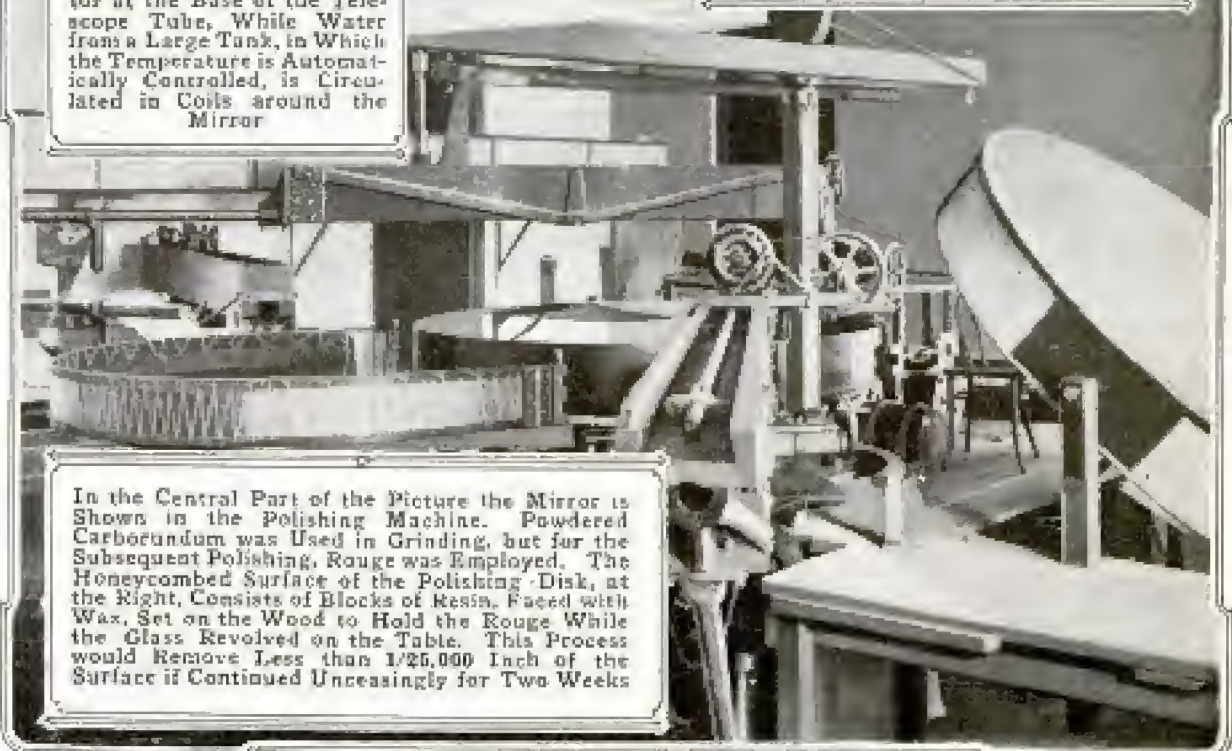

The Main Mirror of the 100-Inch Telescope: The Picture was Taken Before the Grinding of the Reflector had been Completed and Shows the Four-and-a-Half-Ton Cylinder of Glass on the Rotary Grinding Table in the Shops at Pasadena, Where the Work was Done by the Expert in Charge of Optics at the Mount Wilson Observatory. The Honeycomb Plate Seen at the Left is the Grinding Disk, Which, When in Use, was Held by the Big Arm That Extends over the Mirror

Elevator Installed beneath Telescope to Facilitate Removal of Reflector to Laboratory Below, Where the Periodical Resilvering of Its Surface will be Accomplished. Before Removal from the Instrument, the Mirror's Housing is Bolted to the Elevator's Upturned Arms

Felt and Cork Insulate the Steel Housing of the Reflector at the Base of the Telescope Tube, While Water from a Large Tank, in Which the Temperature is Automatically Controlled, is Circulated in Coils around the Mirror

In the Central Part of the Picture the Mirror is Shown in the Polishing Machine. Powdered Carborundum was Used in Grinding, but for the Subsequent Polishing, Rouge was Employed. The Honeycombed Surface of the Polishing Disk, at the Right, Consists of Blocks of Resin, Faced with Wax, Set on the Wood to Hold the Rouge While the Glass Revolved on the Table. This Process would Remove Less than 1/25,000 Inch of the Surface if Continued Unceasingly for Two Weeks

At the Left is Shown the Big Steel Yoke Which Serves as a Mounting for the Tube. While at the Right the First Section of the Latter is in Place. The Floats on Which the Yoke is Rotated Are within the Cylindrical Members to be Seen at the Upper and Lower Ends. At the Bottom of the Right-Hand Picture may be Seen a Small Section of the Driving Worm Wheel, about the Circumference of Which Are 1,440 Teeth. The Cutting of the Latter Was an Extremely Delicate Piece of Work Requiring Great Skill

The Big Worm Gear Which Works in Conjunction with the Driving Clock That Keeps the Telescope Constantly Pointing at a Star Irrespective of the Earth's Movements. The Teeth about its Circumference had to be cut so That they would Not Vary More than 1/10,000 Inch

Above is the Traveling Crane Used for Erecting the Telescope. It Also Provides a Means of Handling Heavy Parts of the Instrument at Times When Cleaning or Repairing has to be Done. The Apparatus Operates in a Grooved Track That Permits it to Crawl up and down One Side of the Massive Dome. The Picture was Taken by Flash Light While the Photographer was Lowered through the Roof on the End of a Hoisting Crane, Nearly 90 Feet from the Floor

One End of the Axle on Which the Telescope Tube Swings in the Yoke. The Bearing Consists of Two Races of Balls and Two of Rollers, Which are Kept in Perfect Alignment by Means of a Special Mechanism Housed within the Walls of the Steel Framework

Above, and Also at the Right, are Presented Two Views of the Upper of the Two Big Bearings on Which the Yoke, Holding the Telescope Tube, Swings. These Bearings are Constructed as Accurately as Any Watch, the Permissible Error Being Only $1/10,000$ Inch. Most of the Friction is Removed by Means of a Hollow Steel Float Lying in a Tank of Mercury. Auxiliary Instruments Weighing from a Few Ounces to a Ton or More, When Placed upon the Telescope, Necessitate Rebalancing It Each Time. For This Purpose Each Bearing Has a Gauge Which Controls the Level of the Quicksilver. In the Picture at the Right, the Small Cylindrical Object, That Appears to Be on a Platform near the Top of the Steel Ladder, is One of These Instruments

The Chief Instrument Maker of the Observatory and Two of His Skilled Mechanics Executed the Extremely Delicate Work of Cutting the Teeth of the Great Worm Gear, Which is Shown in Progress Here. After being Cut, the Teeth are Ground with Carborundum and Polished with Rouge. From Start to Finish, Accuracy has been the Paramount Requirement in Building the Telescope

This Shows the Gear Surface of the Big Cast-Iron Wheel Ready for the Painstaking Grinding and Polishing Work. The Danger of Damaging the Teeth While Transporting the Heavy Wheel to the Mountain Observatory, and the Need of Extreme Precision, Caused Those in Charge of the Work to Delay the Gear Cutting Until the Member had been Installed

EXCAVATE ANCIENT VESSEL REMARKABLY PRESERVED

Of late a most interesting memento of the Norsemen of old, a remarkably well preserved 70-ft. boat, believed to

excavated at Oseberg, Norway, at a point about two miles from the sea and at an elevation of some 50 feet. Structural details of the craft and the character of its decorations are considered to be unquestionable evidence that it

was in use a hundred years or more before that intrepid viking, Eric the Red, discovered Greenland. As the boat was being uncovered, its pieces—which were not all intact—were numbered so that no difficulty was later encountered in the re-assembly at Christiania. The oak timbers were in such splendid condition that it was possible to steam them and give original shape to them and the boat. Except for one beam and a few pieces, only an inch or two in length, the vessel is composed entirely of

COURTESY MOTORSHIP AND MOTORBOAT

Although of considerable size, the shape of the boat shows that it was probably used in the narrow inlets, or fiords, of Norway, not on the open sea.

have been used in the ninth century, has been brought to light. It was

its original timbers. The size of the boat makes it especially treasured.

LOW LEATHER BACK FOR MOTORCYCLE SEAT

A new attachment for a motorcycle, which affords considerable comfort for a rider, is a crescent-shaped leather back which attaches to the seat by means of the same bolts that hold the saddle in place. The article is so low

that it is not a serious inconvenience in mounting or dismounting. Particularly for those who take long rides and are troubled with backache as a consequence, the support will prove to be a rest-giving device.

EASTERN BATHING BEACHES PROTECTED FROM SHARKS

Precautions have been taken at the Atlantic coast resorts to prevent sharks from reaching the bathing beaches, and there seems to be little likelihood that the tragedies of last season will be reenacted during the coming summer at such places. Heavy wire nets and chain barriers were erected at most of the popular bathing points after the New Jersey incidences which terrorized vacationists from New York to Savannah. It is under-

RUSTIC REGISTRY BOOTH IN NATIONAL FOREST

Travelers' registers were used in the numerous national forests of this country for the first time during the recreation season of 1916. They were to be found at the principal entrances, at the ranger stations, and other frequented points. Each contained space for 2,000 names, and every person entering one of the reserved areas was invited to record his name. One purpose of the registers was to make it easier for the rangers to warn, or rescue, persons in

case of a forest fire, and to make more probable the delivery of telegrams or other important messages. In some instances, as in the Snoqualmie Forest, rustic booths were built to house the registers. In the one shown herewith the book is kept behind a hinged shelf, which when let down serves as a writing desk.

A Sign in Snoqualmie National Forest Inviting Travelers to Register Their Names, and an Artistic Booth Built to House the Register

SPECIAL ROOF INCREASES CAPACITY OF SILO

A sectional silo roof has been designed which can be opened in such a way that silage can be piled high above

the permanent walls. In this way enough fodder can be put in storage at one time to fill the structure completely when settling has taken place. The ordinary silo is not only a dark, ill-ventilated place for the trampers to work in, but when the fodder has settled it leaves about one-fourth of the space vacant. This roof is pyramidal and is composed of triangular sections

supported by an iron framework. Hinges at the outer edges permit the sections to be set in an upright position while the silo is being filled, thereby letting in light and air. Inside the opened roof, a woven-wire cylinder is placed to keep the excess fodder from falling off. When no longer needed this guard can be removed. Access to the top of the silo is gained by a movable ladder suspended from a track that runs around under the eaves.

3832

NICARAGUAN CANAL PROJECT NO LONGER MENACES PANAMA

In ratifying a treaty by which the United States agrees to pay the Nicaraguan government \$3,000,000 for the perpetual and exclusive right of cutting a canal across that republic's territory and thereby establishing a new passageway between the Atlantic and Pacific oceans, the government has made a significant, not to say impor-

tant, move. The agreement gives us the Great and Little Corn islands as well as the authority to establish in the Gulf of Fonseca—which is considered to be, strategically and otherwise, the best Pacific-coast harbor south of San Francisco—a naval station. The Corn islands and Tigre Island, the latter within the mouth of the gulf, are to be heavily fortified. As a protection for Panama Canal, the value of a naval station in Central America and fortified bases in the Caribbean is obvious. On the other hand the Nicaraguan canal rights are probably of equal, if not even greater, importance. In recent years the practicability of constructing the long-proposed waterway, which would make use of the natural advantages offered by Lake Nicaragua and its outlet, the San Juan River, cost less than half as much as did Panama Canal, and provide a route shorter than the existing one, has come to be realized by engineers. The military and commercial danger to Panama Canal would have been momentous had a foreign power undertaken the enterprise. And of late two great nations are understood to have discussed the project in secret. The purchase of the option by the United States has therefore been timely.

3696

ADJUSTABLE PEDALS FOR THE MOTORIST

Among the auto accessories of recent invention are adjustable pedals, or

pedal attachments, made to suit all lengths of foot reach. When these are attached to the regular brake and clutch pedals, two or more members of a

family with varying reach can drive the same car in comfort. The attachments fit over the standard pedals, furnish a firm grip for the feet, and are readily adjusted at the required height by a locking bar.

MANY INSTRUMENTS COMBINED IN MOVIE ORGAN

The special musical needs of the motion-picture theaters have been largely responsible for the development of an instrument, made in California, which, under the direction of a single

operator, can produce the soft tones of a piano or a symphony orchestra, or it can be changed instantly to give forth the crashing harmony of a brass band. Musicians in motion-picture theaters

are often required to change quickly from one selection to another, according to the scenes. The effect of a picture is heightened, also, if certain sounds, such as the warning of an automobile horn, are introduced at the proper moment. The instrument referred to is constructed to meet all these requirements. It is a combination of a player piano, a pressure reed organ, and pipes producing the effect of an orchestra, and has in addition a large number of special attachments. It is operated electrically, uses ordinary 88-note roll music, and is equipped with a patented device whereby the operator

can shift instantly from one music roll to another. If preferred, the piano or the organ can be played alone, manually or mechanically, or as many of the orchestral and band attachments can be introduced as desired. The largest size in which this instrument is made is 31 ft. long and 5 ft. 2 in. high. A skilled operator can produce music having no suggestion of mechanical playing and by pulling and releasing certain cords, which terminate above the keyboard, he can introduce at will such features as the sound of horses' hoofs, cow bells, an automobile horn, the whistle of a bird, and the like.

3628

ANIMAL AMBULANCE HAS LABOR-SAVING DEVICES

An animal ambulance in which are embodied several special features, including labor-saving means for handling prostrate beasts, has recently been constructed for the Los Angeles Humane Animal Commission. The body of the car in which the creatures are carried is well padded and is hung low. It is provided with a rear and a side door and suitable means of approach. The side door is frequently

utilized in leading a horse from the car in preference to backing it out. Concealed just back of the driver's seat is a windlass operated by the engine. When a horse cannot be led into the car it is hobbled and thrown, if not already prostrate, after which it is rolled over onto a platform mounted on rollers. With the aid of the windlass and rope the platform and its burden are drawn into the automobile. The car is provided with a gas outfit with which an animal in a hopeless condition can be put out of misery without delay or additional suffering.

BIG ARMY FLYING SCHOOL STARTED IN EAST

The cause of aviation in this country has been given a decided advance by the recent purchase of 1,169 acres of land near Hampton, Va., where an army aviation school and experiment station will be established. It is stated that contracts will soon be awarded for buildings costing about \$1,500,000, and that eventually several millions will be expended. The contemplated equipment will include everything needed to test motors, aeroplane parts, materials used in the construction of aeroplanes and balloons, instruments used in the navigation of the air, and the testing of new inventions pertaining to flying.

3620 Attachment

CAMERA CLAMP TO BE USED INSTEAD OF TRIPOD

Any hand camera can be fastened securely to a chair back, a small tree, fence rail, or post by means of a clamp recently placed on the market and designed to replace a tripod. It includes two stout wire hooks of different length, a locking lever, and a detachable chain which is needed only in fastening the clamp on objects exceeding 1 in. in diameter. The camera may be set in place either before or after the clamp is fastened to the object which is to serve as a support. If the latter is a post or a tree, or any other object up to 3 in. or 4 in. in diameter, one of the links of the chain is engaged in either hook of the lever. The clamp is especially useful in taking pictures with the camera downward.

LAWN SPRINKLER WORKS ON A NOVEL PLAN

In an efficient lawn sprinkler of novel design the pressure of water through a 1-in. hose drives a small tur-

NO

bine, the shaft of which is provided with a worm that turns a wheel geared to a crank, thus moving a long outlet pipe in a semicircle of 15-ft. radius. The pipe into which the water passes through the turbine has 16 outlet holes, and the water is emitted in the form of parallel sprays with the effect of a gentle shower. Each revolution of the wheel causes the pipe to swing with a circular motion that sprinkles the water over a total width of 30 ft. of lawn. In operation the apparatus is said to make an ideal lawn sprinkler.

It has been demonstrated at the experimental paper works operated by the Bureau of Standards, that a good grade of paper stock can be made from used twine and cord that is usually wasted.

TURNING VAGRANCY TO ACCOUNT

3322

BY LOUIS J. HENNESSEY

WITH railroads stretching their steel tentacles to the four points of the compass, Houston, Tex., like many other large American cities, has felt the necessity of providing employment for hundreds of tramps, hobos and other vagrants, who use the freight cars of the railroads as a means of travel. Instead of providing steam-heated cells and every inducement to preserve the spirit of idleness, Houston offers a farm where all town prisoners spend their terms.

Intimate contact with the class of humanity usually brought before the magistrate, led the mayor of Houston to believe that the system of dealing with minor offenders was wrong. In his estimation, a sentence spent in a town jail did not inure to the good of either the prisoner or the community. So he devised ways and means of relieving the city of the burden of supporting nonproducers, and incidentally offered the prisoners an opportunity to learn the elements of successful farming.

The Houston city farm embraces 319 acres of land just beyond the outskirts of the city. It is not the very best land obtainable, but part of the mayor's scheme was to prove the fertility of lands not generally regarded highly for agricultural purposes. In this he has succeeded. In 10 months' time the city farm has raised crops of cotton, corn, potatoes, sorghum, and peanuts, valued at approximately \$10,000; this aside from the products used by the prisoners themselves.

An interesting feature of the Houston city farm is the large, well-ventilated "bunk house," used as sleeping quarters by the prisoners. Upon his arrival at the farm, the prisoner is led into the office of the bunk house, relieved of all his clothing, and introduced to a bath of cold, chemically treated water. The clothing worn by the prisoner is taken to a building apart from the bunk house, and thoroughly fumigated. Every vestige of vermin is removed. Garments worn

by the prisoner during his sojourn on the farm are furnished by the city.

In caring for the creature comforts of the farm's guests, the city of Houston has overlooked nothing. The beds used by the prisoners are double-decked affairs, running the length of the bunk house. Sanitary mattresses are used. Midway between the compartments used by the white and negro prisoners, a series of shower baths and stationary washstands are conveniently located. Fresh linen is always obtainable, and strange as it may seem, men who have not averaged one bath a month, soon become accustomed to taking two a day—morning and evening.

A canning factory, operated as an adjunct of the city farm, provides employment for the female prisoners. Sorghum and sweet potatoes, are marketed, as well as green peas. Separate accommodations keep the men and women apart, and there is no social contact whatever.

Work begins at 5:30, when the prisoners awake to the notes of a bugle. Ten minutes are set aside for the regulation "setting-up" exercises, and then all hands enjoy a breakfast which invariably includes fresh milk, eggs, and vegetables raised on the farm. Work ceases at 5:30 p. m., and the prisoners spend the evening as they see fit. Ample supplies of reading matter are kept on hand, and the morals of the men are always improved after a 30 or 60-day visit to the farm.

The buildings on the city farm of Houston have been erected at a cost of \$15,153.50, and are designed with an idea of permanency. Other equipment, including farm implements, live stock, fencing, teams, etc., brings the total investment, exclusive of land, up to \$23,765.91. It is estimated that the average cost of prisoner per month is \$18.60, this including groceries, meats, feed for live stock, salaries of superintendent, assistants and matrons, and incidentals.

It is believed that the cost of caring

for the town prisoners on the farm can be reduced one-half after the farm has been in operation another year. Practically every article of food consumed will be produced on the farm, and it is the intention of the city officials to make the institution a model in every respect.

3446—

HOW TO LIFT HELPLESS MAN FROM BURNING BUILDING

So far as the mere mechanics of the acts involved are concerned, many things, such as rescuing a drowning

person from the water, overcoming an unexpected assailant, and removing prostrated victims from burning buildings, are often simple enough to perform providing resourcefulness rather than brute strength is used. There are many compara-

tively easy ways of accomplishing feats which might readily prove too much for an unthinking Hercules. Two methods of carrying a helpless person from a blazing building, when a ladder offers the only means of egress, were recently demonstrated. One of these makes use of the victim's coat, and the other provides for handling a disrobed person. In the first case, the coat is grasped by the collar, pulled down over the shoulders, and the tail wrapped so as to form a binding that holds the arms firmly above the elbows. The rescuer swings the victim onto his back and draws the twisted coat over his own head, thus leaving both arms free for negotiating the ladder. The other plan is to tie the victim's wrists together in front and carry out the rest of the procedure just recited, except that the man is lifted face forward instead of back to back.

TO BUILD ALASKA ROAD WITH CANAL EQUIPMENT

Canal Record 1-17-1917

The Alaskan Engineering Commission, which is in charge of building the government's railway in Alaska, is to make a considerable saving in expenditure by using much of the equipment employed in digging the Panama Canal. Already 47,000 lb. of copper wire have been sent from the isthmus northward. Among other items which are to see service in a frigid as well as in a tropical region, are 50 flat cars, 11 locomotives, two steam shovels, and five dump cars. Four of the engines weigh 113 tons each and six are 42-in.-gauge engines with a weight of 33 tons each. All of the rolling stock except the narrow-gauge engines has been changed from the isthmian standard gauge of 5 ft. to the United States standard of 4 ft. 8½ inches.

3655—

CONVENIENT VIAL FOR KEEPING SERUM

Lancet 12-16-16

Of special interest to the medical profession is a vial recently devised in France in which certain kinds of serum

can be kept ready for use at any time. It consists of a small bottle having a rubber stopper, from the lower end of which hangs a little tube, for holding a gram of serum

in a dry state. The tube extends down into carbolyzed water that partly fills the bottle. When the serum is wanted the tube is removed and its contents emptied into the liquid, in which it quickly dissolves, and the solution is then ready for use.

¶In 1915 the Wisconsin state hatcheries included in its distribution to the lakes and streams of the state 10,500,000 brook and lake-trout fry and 143,000,000 wall-eyed pike.

APPARATUS FOR TESTING STRENGTH OF ANCHORS

When a ship is anchored in a storm the safety of the vessel depends quite as much on the strength of the anchor itself as upon the cables connected with it. Hence the test to which an anchor is subjected before it is put into service is an important one. The majority of the anchors used in the United States Navy and on merchant ships are of cast steel. They weigh from 200 to 20,000 lb. The parts of each are carefully tested before being assembled, by dropping them from certain heights and by hammering their surface to detect any flaws. No defects being found, the parts are put together and the anchor is placed in a machine such as is shown in the illustration. By

this means a pull, calculated according to the size of anchor, is exerted on the shank. The scales, which form a part of the testing machine, are set so that when the desired maximum of strain

has been reached, the beam rises and then the pull is relaxed. The anchor shown here weighs 20,000 lb. and is for one of the new United States dreadnaughts.

3190

MACHINE TRANSPORTED ON ITS OWN BELT WHEEL

In South America the transporting of heavy machinery to its destination sometimes proves a more difficult task than the selling of it. The Brazil office of an American concern recently sold a large air compressor, which was to be delivered during the rainy season to a point in the mountains. The road was muddy and had many sharp turns and

A Heavy Air Compressor being Transported through a Mountainous Region in South America, Supported by Its Own Belt Wheel and a Heavy Cart

there was no wagon heavy enough to haul the big load. It was finally decided to assemble the machine partly and place one end on a wagon while the rest of the weight was borne on the big belt wheel which trailed at the rear. This member proved broad enough to prevent its sinking in the mud, and the arrangement made it easy to follow the abrupt turns in the road. When going downhill, a wedge was inserted between the wheel and the frame to serve as a brake. With 18 head of oxen, and nearly as many men, the machine was moved five miles a day.

The recently launched battleship "Mississippi," of 33,000 tons full-load displacement, is the third vessel to bear that name, the first having been the flagship of Commodore Perry at the time commerce was opened with Japan.

TAP THAT CUTS METAL IN NEW WAY

A tap for cutting nuts, and for similar uses, has been manufactured

Views of New Tap Showing Flutes of Special Design Which Give the Tool Great Durability and Enable It to Operate with Less than Ordinary Pressure

by a Massachusetts concern, which is so designed that it shears out long curls of metal instead of cutting the material into fragments, as is commonly the case with ordinary taps. Each of these tools has three flutes which extend down its sides parallel

This Invention Dispenses with the Labor of a Large Number of Children Formerly Employed to Arrange Herring on Racks Preparatory to Sending the Fish to the Cooking Machines

with its axis until they reach a point a short distance from the cutting end. Here each flute is diverted to one side at a slight angle. The cutting edge of the flute forms an acute angle and the op-

posite edge an obtuse angle. As the tool revolves in the metal it shears out the chips, as already stated. The curls so cut are discharged from the hole as fast as they are made, whereas the fine chips cut by an ordinary tap often accumulate in the hole, and to remove them the tool has to be backed out. This tap operates with less pressure than is usually required. It also wears longer and seldom breaks. It cuts true to size in all kinds of materials.

2968

LABOR-SAVING MACHINES IN FISH-PACKING TRADE

In the great changes which have come in the fish-packing industry in recent years, particularly on the Maine coast, two machines have played an important part. One of these has revolutionized the method of cooking sardines, cooking large quantities at one time. This cooker will hold 700 cans immersed in olive or cottonseed oil, which is heated to boiling by superheated steam. Each can is covered with a temporary perforated top which keeps the fish from floating out of the containers while being cooked. The machine discharges the cans at the rate of

A Machine Which Cooks Sardines in Boiling Olive or Cottonseed Oil, Brought to the Required Temperature by Superheated Steam, and Discharges Them at the Rate of 55 Cans per Minute

E. M. Lawrence, Lubec, Me.

65 per minute, at the same time placing an air-tight cover on each, so that they are ready to be sealed. The other machine referred to does the work which, in the larger factories, formerly required 100 to 200 boys and girls. These children were employed to "flake" herring, that is to place them side by side on racks in which they were sent to the roasters or steam-cooking chests. Now this is done by a machine which carries the herring on an endless belt, consisting of trough-shaped units, to the racks where they are deposited in the position desired. Both of these machines were invented by a resident of Lubec, Maine.

3691

MINER'S ELECTRIC LAMP OF IMPROVED FORM

An improved form of miner's lamp, recently approved by the United States Bureau of Mines, has a battery case of

either sheet steel or aluminum connected by a 43-in. rubber-coated copper cable to the electric lamp on the miner's cap. The lamp is a steel shell with reflector and a $\frac{1}{2}$ -cp. bulb having a

guaranteed life of 300 hours. The total weight of the outfit is approximately $4\frac{1}{2}$ lb., the cap lamp itself weighing only 4 oz. No gas being generated by the battery, it is explosion-proof; all parts are also waterproof.

2839

HOLDERS FOR GARAGE DOORS SAFEGUARD MOTOR CAR

Both convenience and accident insurance are offered by holders which prevent the wind from slamming the doors when a car is being driven into or out of a garage. The device is of simple, stanch construction and may be applied to curved-top doors as easily as to ordinary ones. It does not

interfere with casual opening or closing, but enables a pair of doors to be locked back in an open position so

When the Holders are installed. There Is No Danger of the Wind Causing the Garage Doors to Slam against a Car as It is Entering or Leaving the Building

that the chance of their smashing against a car, breaking the lamps or denting the fenders, is obviated.

3192

HOLLOW CONCRETE SPHERE IS A DANCE HALL

A building of reinforced concrete, recently erected as a dancing pavilion at an ocean resort in California, is constructed in the shape of a perfect hemisphere. The diameter of the sphere is 101 ft. and the building rests upon 16 concrete pillars, the spherical portion being raised 12 ft. from the floor. The walls are composed of reinforced concrete. Light is admitted through a skylight at the top, 40 ft. in diameter. As the building has no supports except the pillars around the circle, there is an uninterrupted area, 100 ft. in diameter, for dancing.

LAWN-MOWER SHARPENER
2822 OF NOVEL KIND

As the spiral blades of a rotary lawn mower revolve they are made to sharpen themselves by an ingenious

Lawn Mower with Sharpener Attached and Ready for Use: The Wooden Block Bearing a Strip of Corundum is Clamped to the Roller Which Normally Rests on the Ground, and Fastened to the Axle between the Wheels

device recently patented by a young man of Portland, Ore. The sharpener is made to clasp on any lawn mower and may be attached quickly and used by a novice. It sharpens the blades in a few minutes, as the mower is being run over the lawn, by their rotation against the grinding element of the attachment. This grinding element is a bar of corundum, which is attached to a block of wood. The rest of the device consists of the arrangement by which it is made fast to the mower in such a position that the blades or knives come into contact with the grinding surface as they rotate, while the corundum strip is held under slight tension so as to produce a square, even, and sharp bevel on the knives.

3740 —
LINSEED-OIL TREATMENT
FOR DYING TREES

La Nature 11-11-16
A curious method of reviving languishing or dying trees was reported recently to the French Academy of Agriculture after being tested successfully in experimental gardens at Autun. The earth was first removed so as to lay bare the larger root branches, in which longitudinal slits were then cut

and kept open by wedges. These cuts were well rubbed with linseed oil and after awhile numerous small roots appeared, forming a sort of fur, and the trees so treated rapidly gained new life and vigor. The method was recommended for trial in the case of languishing fruit trees.

3759
CENTRALIZING CONCRETE
WORK OF A RAILROAD

An advance step in the manufacture of concrete products has been taken by a western railroad, which has established factories at Galesburg, Ill., Hannibal, Mo., and Havelock, Neb., for the execution of work for the entire system, instead of making their concrete products wherever they were needed, as has been the general practice heretofore. This plan makes it possible to standardize all products, mold them in sections ready to put together, and then ship them out over the line; complete concrete bridges, as well as watering troughs, fence posts, and cement curbing for the station platforms in small towns being turned out by the factories. Concrete bridges are made in sections all ready to be put together. Huge slabs of reinforced concrete are made in 14, 16, and 20-ft. lengths, and with a width of 7 ft. Two are fitted together sidewise, giving a width of 14 ft. to the single-track roadbed, while as many are placed end to end as are necessary for the length of the bridge. Even the piling for the bridges is made in standard lengths at the nearest plant and shipped out ready to be installed. Depot curbing is made in short sections, corners and all.

Several practical features characterize the plant at Havelock, Neb. Though but 60 ft. wide it is nearly five blocks long. To handle the huge concrete slabs, which weigh anywhere from 13 to 35 tons, a huge traveling crane has been installed which runs the entire length of the plant, and also serves to unload material. The concrete mixer runs on rails directly over a row of molds and is moved to any set of forms it is desired to fill.

Cars Used to Carry Watering-Trough Molds: The Molds are Seen on the Cars. Whenever a Trough is Completed It is Run Out of the Building on These Little Cars. All Hand Labor is Done Away With. A Huge Crane Surmounting the Entire Plant is Used for Loading and Unloading the Products and Material

Bridge Slabs, All Ready to be Installed: Huge Slabs Such as These Form the Component Part of Bridges and can be Shipped Out to Any Point on the Line on a Moment's Notice. Under the Old Plan They would have been Made on the Spot

Piling for the Bridges is Also Manufactured in Standard Lengths and a Bridge All Ready to be Installed can be Shipped Out from One of the Plants. Toward the Left is Seen the Concrete Mixer for Outdoor Work. It Runs on Rails and can be Moved to Almost Any Part of the Yard

STEAM SHOVEL LIFTS ITS OWN WHEELS

A steam-shovel engineer recently decided to hasten the slow operation

This Shows How a Steam Shovel was Raised from the Ground by Its Own Power, So That Planks could be Inserted under the Wheels. With the Bucket Lowered to the Ground, the Power was Turned On, Which Tilted the Whole Machine

of placing planks under the wheels of his ponderous machine in order to move it along. He made the shovel aid in lifting up the wheels. By lowering the steel bucket flat against the ground and then applying the power of the engine as though excavating, the entire apparatus was tilted until one wheel was a foot from the ground.

3840 VAST TRACTS OPENED UP FOR STOCK RAISERS

The signing by the president of what is known as the 640-acre stock-raising homestead law will result in the opening up to settlers of public lands in the West many million acres in extent. Under this law the land must be taken up for stock-raising homesteads, and for no other purpose. The total cost for filing on 640 acres, which is the maximum amount allowed per individual, is \$34. Improvements must be made and cattle raised at the outset. One object of this measure, which has

the approval of the Department of Agriculture, is to open up areas which are valuable only for grazing and raising forage crops, do not contain merchantable timber, and cannot be irrigated from any known water supply. The act is so worded that it will bring only bona-fide settlers into the regions opened up. Special precautions are being taken to prevent large corporations from gaining possession of territory by subterfuges. Colorado estimates that the opportunities offered will bring 100,000 persons to that state alone, within a year.

ADJUSTABLE HORSE COLLAR 2896 AND HAMES

It is so important that the collar worn by a draft horse be properly fitted, if he is to do his full share of hauling, that the majority of owners of heavy teams exercise great care in getting collars for their horses that are the right size. A new collar has been placed on the market which can be adjusted 4 in. in width at the top, 3 in. at the bottom, and correspondingly as to length, so that it can be well fitted to an animal no matter what its condition of flesh. The article is really a combination of collar and hames and is made of pressed steel and leather, with a well-padded cushion. At the

Combination Horse Collar and Hames Which can be Adjusted Both as to Length and Width at the Top and Bottom. It is Made of Pressed Steel and Leather

top is a swivel joint which hinges the halves together so that they are easy to handle in harnessing and unharnessing. The collar is equipped with a self-adjusting neck pad.

Near the Bow of the Sunken Vessel Is a Device, Held in Place by Magnets, Which Screws to the Hull a Plate Attached to the End of a Hoisting Cable. Other Cables are Shown Already Attached. A Diagram of the Mechanism Appears in the Insert, together with a Detail of a Combination Drill, Tap, and Bolt

3510 MAGNETIC DEVICE FASTENS CABLES TO SUNKEN SHIPS

A ship-salvaging device has been invented by a resident of Seattle, one of the interesting features of which is that it employs electromagnets to hold the apparatus to the side of the sunken vessel, thereby making it unnecessary to employ divers for such work. The apparatus has not yet been given a practical test, so far as is known, but the type of service which it is intended to perform by its unusual use of magnets suggests an enlarged field of application. It is provided with three electromagnets placed about a watertight case containing an electric motor. When the apparatus is about to be used the case is filled with compressed air to withstand water pressure. The motor operates a set of boring instruments, each of which is a combination drill, tap, and bolt. A steel plate, in which are holes properly placed, is fitted over these drills and to the plate a hoisting cable is attached. The device is lowered to the desired point close beside the sunken ship and then the

magnets are energized so that they fasten themselves to the steel hull. This is indicated above water by the lighting of three bulbs. When the motor is started the drilling instruments begin boring into the hull. They are so made that at the proper time they break off, so that the mechanism can be raised to the surface, while the plate to which the hoisting cable is attached remains bolted to the hull. When enough cables have been attached in this way the raising of the vessel can begin.

2863 OLD HULL SUPPLIES SALT WATER FOR BATH POOL

A most ingenious means of profitably utilizing a wrecked and abandoned boat hull is that applied in the case of the "Seminole," which is now used as a floating tank to haul salt water for a public swimming pool in Oakland, Calif. The "Seminole" was one of two river boats which collided in San Francisco Bay and was so badly damaged that the hull was rescued with difficulty but never re-

turned to service. In Oakland is a salt-water swimming pool which had depreciated in value because of the difficulty of getting clean water. A shipyard owner, seeing an opportunity for a good investment, bought the hull at a low figure and also acquired control of the pool. He then laid a 4-in. pipe from the pool to a dock in the estuary two miles away, where he tied the hull. On the latter an 18-hp. pumping plant was installed. From time to time what once was the "Seminole" is towed out to Golden Gate and allowed to fill with 750,000 gal. of clean salt water. It is then brought back and its contents pumped through the pipe line to a reservoir serving the pool. The popularity of the baths has greatly increased now that the bathers are sure of salt water practically as clean as the open ocean.

Swimming Pool Now Supplied with Clean Sea Water by the "Seminole," Which Serves as a Water Barge

PEACH AND APRICOT SEEDS USED AS FUEL

Hundreds of tons of peach and apricot seeds, which have been thrown away every season heretofore by the canning factories in the great fruit districts of California, are now sold as fuel and bring \$2.50 a ton retail. Formerly the seeds were considered too hard for fuel, but recently it was found that when heated in a stove burning hard coal they soon pop open and ignite, after which they burn with an intense glow like that of anthracite, and are practically smokeless, besides holding a fire well. This discovery at once gave the despised seeds a market value, and they have become a source of profit to the canners who formerly discarded them as worthless.

3220

HEAVY DONKEY ENGINE CARRIED BY TRUCK

A motor truck was called upon to do extra-heavy duty in the big woods near Seattle recently, when it became necessary to move a 15-ton donkey engine to a new location. The feat was accomplished by setting up the engine on two big logs, laid side by side, making all firm by a wooden

Above: View on the Deck of the Barge, Showing the 18-Horsepower Pumping Plant

Left: Hull of the "Seminole" at the Dock Where It Connects with a Two-Mile Pipe Line through Which the Water is Pumped

Kelly

Carrying a 15-Ton Donkey Engine on a Motor Truck in the Washington Woods

2595

superstructure. The whole contrivance was then placed on a semitrailer, long enough to accommodate it, and attached to a $3\frac{1}{2}$ -ton motor truck. The truck responded gamely to the unusual load and carried it the required distance along a state road, thus demonstrating a new use for the motor truck in the lumber business.

3712

OLD PAPER MADE INTO NEW BY CHEAP PROCESS

C. S. Munster

Some relief from the paper shortage, it is thought, may result from the discovery of a new process by which old newspapers can be used in producing fresh news-print paper. Experiments were made recently with three tons of old dailies and the new paper made from them is described as being whiter than the original. One of the objections to using old papers in the past has been that under the usual treatment the heat applied to the pulp caused it to turn a bright orange, thus making it unfit for use. The new method is essentially a cold process and involves a different chemical treatment so that a white product is possible. The cost of this process is said to be under \$5 per ton. Certain manufacturers are reported to be much interested in the new method.

GOOD POINTS ARE EMBODIED IN PUBLIC DRINKING CUP

Two objectionable features of the sanitary cup, such as is commonly employed with the so-called drinking fountains installed in public parks and elsewhere, have been overcome in the construction of a new article of this character. The depression of a thumb lever opens a valve and causes the water to fill a small chamber before flowing through openings in the rim of the bowl and forming a cone-shaped bubble. This arrangement dissipates the back pressure and prevents a shaft of water from spurting up as the valve is first opened. When fountains of this sort are used chiefly by children, it is quite a usual thing for some youngster to place one hand over the cup and squirt the water. When such a thing is attempted with the new device, the water is forced into tubes and carried into the drain pipe. Thus both spouting and squirting are obviated.

STERN EXTENSION MAKES MOTORBOAT SKIM WATER

In order to get the hydroplane effect and increase the speed of his motorboat as much as possible, a racing

Rear View of Motorboat Extension, Showing the Metal Shield over the Propeller and the Construction of the False Stern

enthusiast of White Bear Lake, Minn., has equipped the boat with a framework extension at the stern, which supports the propeller at its outer end. To carry the additional outboard weight there is a metal shield with a slightly curved surface above the propeller. When the boat is running fast this glides along the surface, lifting the false stern clear into the air, while the bow is also lifted and the rest of the hull merely skims the water. The high-powered engine has automobile control.

Motorboat with Novel Stern Extension, Designed to Carry a Curved Shield along the Surface with a Lifting Effect at High Speed

STEREOSCOPIC VIEWS SHOW STARS IN PERSPECTIVE

Sci. Am. 1-13-17

An American astronomer, borrowing the idea from Germany, has prepared stereoscopic views of the heavens, which have been found to portray celestial bodies in vivid perspective. These pictures are especially suited to popular use in the study of the stars. The illusion of perspective is obtained by allowing an interval, perhaps of several years, to elapse between the taking of the two pictures used at one time in the stereoscope. This differ-

ence of time generally permits the body photographed to move enough to present two slightly different aspects to the beholder. In one instance two exposures used were taken 14 years apart, and the resulting effect of depth in the heavens was pronounced very beautiful. This appearance of perspective the astronomer has found

hard to explain in certain cases, for sometimes there has been no observable motion in the object photographed. Furthermore, it was discovered that a pair of photographs from the same negative, showing the Milky Way in one of the constellations, conveyed this same sense of distance when viewed through the stereoscope. These experiments suggest a most interesting field for investigation.

OIL WASTE BURNED AFTER PUMPING IT INTO DITCH

When land adjoining San Francisco Bay was cleared preparatory to erecting the Panama-Pacific Exposition buildings, one of the difficult tasks which the workers faced was the disposal of two large oil tanks and quantities of oil waste which had accumulated while the tanks were in use. To pump the waste into the bay, half a

mile away, would have been to violate the law and seriously injure shipping, as well as harm the game birds which might alight in the oily scum. The tanks were disposed of by jacking them up and hauling them to another location. It was decided to burn the oil, but to do it in such a way that it would be kept well under control. A

ditch 4 ft. deep was dug from the site of the tanks, sloping gradually down to the bay, and filled with water. A dike was constructed at the bay end to keep the water from flowing out except through a passageway under the barrier. The oil waste was then pumped into the ditch and, because it was lighter, spread out over the water from the tanks to the far end. After one or two unsuccessful attempts the oil was set on fire midway between the ends of the ditch. The flames traveled toward each end about as fast as a man would walk. A wind blowing toward the water hastened the blaze moving in that direction. All of the oil was consumed as the fire progressed and produced a vast double column of black smoke that drifted across the sky for many miles, and attracted considerable attention because of its peculiar formation.

GERMAN CONCERN FOUNDED

TO INSURE UNSAFE RISKS

Stillgart Insurance Ass'n

Persons in Germany who are unsafe life-insurance risks can now insure themselves, a company having been organized to issue policies to those to whom the standard concerns decline to give protection. The new movement is the result of a conference of the leading insurance companies in the empire who agreed that in these war times, particularly, all classes should be insured. Since about 10 per cent of the applications coming to German concerns are refused, it is evident that this new undertaking will fill a large gap. Rates and conditions upon which unsafe risks will be taken have been formulated. Some 18 companies have contributed money to the new corporation, which has a capital of about \$700,000 at the present time.

ELECTRIC HEATING UNITS FOR WORKMEN

Workmen who are more or less exposed to winter cold, like crane oper-

Electric Heating Unit, Which can be Used in Groups as a Stove for Workmen in Exposed Positions

ators, shearmen and tablemen in steel plants, can now be warmed in their

uncomfortable cabs by a type of electric heating units recently adapted for the purpose. The new heater is an inclosed steel-jacketed unit, resembling a flat ruler, 2 ft. long, 1½ in. wide, and ¾ in. deep. The steel jacket incloses a heating element and this is in turn inclosed in mica. Either direct or alternating current can be used, and the units can be installed either singly or in groups.

It is hoped that Federal aid can be secured for a proposed school of fisheries at the University of Washington in the state of the same name. Such an institution would be a great aid to all engaged in the fishing industry on the north Pacific coast.

2852 LAKE BOAT LENGTHENED FORTY FEET

By inserting a big section of steel hull in the center of the pleasure boat

of ship alteration took place a few months ago in Detroit. After the vessel had been dry-docked it was cut in two amidships. Ground ways were placed under the forward half, together with greased sliding bilge ways, packing and poppets, in the same way as launching is prepared for. Heavy tackle was then fastened to the bow and with the aid of a steam winch this half

Boat Cut in Two Amidships, Preparatory to Inserting a 40-Foot Section of New Hull

"City of Toledo" its owners increased the length of the craft from 212 to 252 ft. and its passenger capacity from 1,375 to 1,954, or more than 40 per cent. This interesting piece

Pleasure Boat the Passenger Capacity of Which was Increased from 1,375 to 1,954 by Lengthening It 40 Feet

White Star Line, Detroit
G. J. Billman, Sec. Agt.

was drawn forward 40 ft. The section of the steel hull was then built to connect the halves. At a point about 30 ft. forward of the midship frame the width of the new section was increased 27 in. at the light water line and the body faired into the original lines forward and aft. This was done to increase the stability. The lengthening made it possible to construct a ballroom 50 ft. square on the promenade deck. A system of cantilever beams was used to support the upper deck. In this way few obstructing posts were required in the ballroom. The two original boilers, each having three furnaces, were displaced by five return-tube boilers, each having two furnaces. The new boat has two smokestacks instead of one. Another feature is space in the forward part of the vessel for motor cars, which form a large part of the cargo.

2674

TRAINS CARRY OFFICIAL STORM SIGNALS

Whenever the weather bureau predicts a storm, a blizzard, or a cold wave the trains of a western Kansas railroad display the appropriate government weather flags as warning signals for trackmen, bridge gangs, and other employes of the road. Farmers and other residents along the line also get the benefit of the signals and appreciate them. The forecast of a storm, when received in the daily weather bulletin at the general offices of the road, is wired to all train conductors, who promptly place the signal flags, indicating the kind of weather expected, on special staffs mounted on the engines, at each side of the smokestack.

301

NEW STERILIZER OPERATES QUICKLY AND AT LOW COST

A compact, almost instantaneous sterilizer is now being used by physicians, dentists, etc., which sterilizes instruments at atmospheric pressure with steam generated by electricity. It can be operated in full view of a

patient. The apparatus consists of a double-walled chamber with an opening in one end in which is inserted a tray that holds the instruments. Between the walls are electric heating wires. Above the cylinder is a cup

An Apparatus Which Sterilizes in 30 Seconds, with Steam Generated at Atmospheric Pressure by Electricity

from which water can be made to drop at any desired rate. The water drips through a tube and down between the walls, where it is converted into steam by the heated wires. The steam then passes through holes into the chamber and, together with the direct heat from the wires, will sterilize an instrument in 30 seconds.

1669

ADJUSTABLE DISPLAY CASE FOR ADVERTISING MATTER

To permit advertising booklets, catalogues, and railway time-tables of different sizes and shapes to be advantageously displayed in offices and public places, a cabinet is being made which is so arranged that the vertical compartments in each tier can be adjusted to various widths. Metal spacers are fitted into a channel attached at the back of each row. When one of these members is moved to a

*National Ticket Co.

AMERICAN ADAPTS AFRICAN CARRIER TO BABY'S NEEDS

Instead of being rocked to sleep in a regular cradle, the baby of a certain American missionary in Africa often takes its nap while being carried through the jungle in a crib, swung

A Modernized African "Machila" in Which the Baby of an American Missionary in Africa is Carried by Natives from Place to Place

from a pole that rests on the shoulders of two native bearers. The novel conveyance looks a little like a palanquin from India, but really is an adaptation of an African conveyance called a "machila." When the baby's parents are not on the road, the little one's bed is unslung from the pole and placed on a canvas cot, or swung between two trees like a hammock.

SELF-ADJUSTING BELT FOR 3607 MACHINERY

A new nonslipping belt recently placed on the market by a South Dakota company is built of sections of leather, cut and punched by special machines and forced over lengths of coil springs, the number of springs depending on the width of the belt. In making a belt of any desired length, the ends of the springs are coupled and

This Picture Shows Plainly the Construction of a New Nonslipping Belt. Made of Sections of Leather Forced over Coil Springs

hinged on a pin which passes crosswise through one section of leather and is clinched on the outer edges. The leather sections are set close together and edgewise, so that the wearing surface of the belt falls on the end grain of the leather, which gives the best wear. Being under constant pressure from the concealed springs, the belt is said to cling to a pulley with surprising tenacity. The springs are made of steel piano wire and will retain their original tension, it is claimed, under any working conditions. When placed upon the pulleys where it is to work, the belt is adjusted under a slight tension which keeps it constantly tight and prevents slipping.

NEW SURGICAL USE FOR SAUSAGE SKIN

In cases of stricture of the esophagus, which is the canal through which food passes to the stomach and which is situated behind the windpipe, it is very important to secure an early diagnosis. A New York hospital physician reports a new method which gives a clear outline of malignant strictures and is also a readily applied aid in the treatment of moderate cases. A small length of sausage skin, which is the fibrous coat of the intestine of the hog, is thoroughly washed and treated with formaldehyde and glycerin, then formed into a bag by tying one end with silk floss, the other end being slipped over a rubber tube and tied. The bag, which is now only a string, is then easily swallowed by the patient with the aid of a little water, and a thick bismuth mixture is allowed to flow into it, after which X-ray pictures show the outline of the stricture clearly.

SAFETY RULER PREVENTS 3640 INKY FINGERS

A ruling device that is claimed to be the only safety ruler known has been invented by an Ohio man. Its safety

lies in the novel construction, which prevents inking the fingers and smudging the book or paper when ruling, as is common with ordinary rulers. The new ruler consists of two graduated boxwood

strips, forming sidepieces and connected at the ends by T-bars of polished aluminum which support two parallel nickel-plated wires, or bars, in the open space between the sidepieces. The ruling is done on these wires, which are always elevated above the surface to be ruled.

NEW OILCAN MINIMIZES WASTE OF OIL

An oilcan with useful features has been designed by a young inventor of Smithton, Ill. The dome-shaped can is fitted with a false bottom in which are two leather valves, operated by pressure on the real bottom below, which is expanded and flexible. A spout with bent end runs down through the body of the can and is connected to the false bottom, so that oil can only pass into it from the pressure chamber formed by the false bottom, through one of the valves, thus preventing waste. The second valve admits the supply of oil to the pressure chamber, and there is a filling spout in the dome, with a filtering screen. In operation, when the bottom is pressed, oil flows through the first valve into the spout; when the pressure is released, a vacuum is created in the pressure chamber and new oil is drawn in from the can.

Domestic T. Reinhardt
Smithton, Ill.

U-SHAPED BRISTLES USED IN NEW TOOTHBRUSH

Many dentists condemn the stiff-bristle toothbrush, especially when it causes continual laceration of tender gums. With this point in mind, a Pennsylvania inventor has sought to produce a less objectionable article by imbedding both ends of the bristles. Although it is possible that extra attention would be required if such a brush were to be kept sterile, it is easy to see that the looped bristles would not scratch so much as ordinary ones.

NEW SCREENED ENTRYWAY IS TRAP FOR FLIES

For capturing and exterminating house flies that invariably swarm around the doors of grocery stores,

The Lower Part of the Screen Columns are Reinforced with Heavy Netting. While the Traps at the Top may be Removed and Cleaned from Time to Time

restaurants, and similar places, an Illinois man has devised a new type of trap. He makes use of a screened vestibule and at the corners of it, on either side of a swinging door, provides two vertical screen cylinders which extend from the sidewalk to the top of the inclosure. A metal channel piece, that has a row of perforations, is incorporated in each of the wire columns on the inside of the inclosure. Flies congregate within the screened vestibule in preference to the darker interior of the building, and in due course are supposed, in their quest for light, to enter the screened columns through the holes provided in the metal strips. Once inside, they climb upward and eventually pass through a cone trap at the top. In this compartment, from which escape is impossible, they reach poison bait and die. It is argued that the flies on the outside of the building

will, in seeking entry, gather at the sides of the vestibule nearest the store windows, instead of swarming in front of the screen door itself. In actual use the arrangement is said to have proved helpful.

2729 FIBER VESSELS REPLACING GLASS MILK BOTTLES

Air-tight, paraffined fiber containers for liquid and other food products are gradually being adopted by distributors and retailers, and accepted by consumers in certain localities as preferable to glass bottles, jugs, and other vessels. A receptacle that may be destroyed after being used once is of particular advantage in marketing dairy products, for the chipping of glass milk bottles, the possibility of contamination due to their improper sterilization, the loss through breakage, and the inconvenience alike to consumer and dealer occasioned by the necessity of their return, are all serious drawbacks. Therefore it is interesting to note that in several western cities milk, buttermilk, and cream are being delivered in sanitary, spruce-fiber containers that may be destroyed after they have once been used. Packages of the same character, provided with large openings,

By Comparing the Two Cases Above, the Amount of Space Saved by Fiber Containers is Indicated. The Contrast between the Square Can and the Ordinary Milk Bottle is Even More Noticeable. Liquids can be Poured from the Receptacle Freely

Weis Fibre Container Corp
 Monroe, La

are also being made for grocery stores, so that bulk vinegar, oysters, olives, pickles, strained honey, cider, and similar commodities, may be handled conveniently and carried to customers in thoroughly sanitary, clean, and attractive packages. These containers are strong enough to withstand fairly rough handling without leaking, while their contents are not affected through contact with the paraffin coating, which is colorless, odorless, and tasteless. The packages are available in different sizes and when purchased in quantities are of reasonable price. They may be sealed as easily as ordinary milk bottles, and in a delivery wagon have the advantage of occupying much less space than glass bottles of similar capacity.

3535

STOVE LID MADE LIKE

AN IRIS DIAPHRAGM

IND-TID. VARDEN

A kitchen-range cover has recently been patented in Sweden which is so constructed that an opening can be made in it of any size up to the limit of the device. It somewhat resembles an iris diaphragm of a camera or microscope and is a very convenient article in

that it enables a housewife to place dishes of various sizes, even down to a small cup, directly over the fire. The cover is opened and closed by means of a lever to which a knob is attached.

3761

DEVICE FOR SAMPLING CONTENTS OF SACKS

A simple tester has recently been devised by means of which a sample can be secured of the contents of a cotton, or burlap, grain bag without going to the trouble of opening the sack. It consists of a pointed brass tube, 13 in. long and $\frac{3}{8}$ in. in diameter,

in the side of which are six oval openings. In the tube is a plunger provided with a convenient handle. To

The Seed Sampler is Inserted through a Grain Sack. After Which the Plunger is Withdrawn, Allowing Seeds to Flow into the Tube through Holes in Its Side

obtain a sample the pointed end of the tester is inserted through the bag to the desired depth, after which the plunger is withdrawn. This allows the seeds to flow into the tube through the oval holes. After the tester has been removed, the samples which it contains can be emptied out through its open end.

3610

SCREW EXTRACTOR WORKS LIKE A CORKSCREW

A new tool lately placed on the market is designed to save the time and labor hitherto required for the removal of all kinds of broken screws, studs, and stay bolts, which has always been a long and troublesome job. This screw extractor is made of tough steel and operates on the principle of an ordinary corkscrew. When a setscrew, cap screw, or stud snaps off, the machinist equipped with this tool, it is claimed, need only drill a small hole in the broken part and insert the extractor, giving it a slight twist to the left to seat it firmly in the hole. On further twisting, it bites its way into the screw, secures a purchase, and backs the broken screw out on its own threads. When a wrench is brought into play the most stubborn screw comes out without damaging the threads of the hole.

1. A device of the character described comprising a cooking vessel and a substantially tight fitting top therefor; controllable means for fuel for heating the contents of said vessel; a responsive means for controlling said fuel controllable means; a jacket opened at one end into said vessel and at its other end to the atmosphere, said jacket surrounding said heat responsive means whereby heated vapor escaping from said vessel must pass through said jacket, around said responsive means, when the vessel is closed, and a cooling blast of air will pass through said jacket when said vessel is open.

2. A device of the character described comprising a cooking vessel and a substantially tight fitting top therefor; a controllable means for fuel for heating the contents of said vessel; a heat responsive means for controlling said fuel controllable means; a vertically disposed jacket secured to said vessel, open at its upper end into said vessel and at its bottom end to the atmosphere, said jacket surrounding said heat responsive means, whereby heated vapor escaping from said vessel must pass down through said jacket around said responsive means, when the vessel is closed, and a cooling draft of air will pass upwardly through said jacket when said vessel is open.

3. A device of the character described comprising a cooking vessel and a substantially tight fitting top therefor; a jacket surrounding said vessel providing thereby a combustion chamber; a fuel burner supported by and in the lower part of said jacket for heating the contents of said vessel; a smaller jacket attached to the side wall of said cooking vessel, said jacket open at its upper end into said vessel and at its lower end into said combustion chamber; a fuel controlling means supported by said jacket and burner, and a heat responsive means for controlling said burner inclosed in said smaller jacket.

Are Black

Provided with water Pockets. Besides Protecting Walls and Draperies from Hot-Air Currents, It Supplies Moisture to Atmosphere. Small Size. \$1.25

NEW EYES ARE CONTRIVED FOR SHIPS IN FOG

Inasmuch as one of the foremost electric companies has acquired the patent rights, there is considerable reason for the belief that a New York state inventor, who has developed a marine signaling system for the pre-

The Projectors are Mounted in Portholes near the Water Line of a Vessel, and Advantage is Taken of the Fact That Close to the Ocean's Surface Fog Is Usually Translucent

vention of collisions between fog-bound vessels, has worked out a meritorious idea. Advantage is taken of

the fact that close to the surface of the water fog is invariably thin, while a few feet higher it may be impenetrable. As near as possible to the water line of a ship, projectors, equipped with shutters so their light may be flashed intermittently, are installed. An observer, whose post is likewise as near the water as is practicable, is supplied with shuttered glasses connected electrically with the lamp shutters so as to operate in synchronism with them. Just before the projectors flash, the observer's glasses are screened, and an instant after the former are darkened the latter are opened. This arrangement protects the observer's eyes from the blinding glare of the light shafts emanating from his own vessel, but during the period of their extinction permits him to catch the gleams of signal flashes projected from a similarly equipped ship.

FOLDING PAPER BOX MADE IN ONE PIECE

Folding paper boxes are now used for a great variety of purposes, especially for packing laundry, suits, shirt waists, and stationery, and the usual construction has been in two pieces. A Michigan concern has invented a one-

How the New One-Piece Folding Paper Box is Made: At the Left Is a View of the Paper Blank. Then the Box is Seen in Process of Construction, and Finally the Box Completed and Locked

piece folding box that reduces the cost of manufacture by eliminating the necessity for expensive dies to stamp out the paper shapes or blanks. The new box is made in one simple operation, all the sides being cut on right angles. When folded, the corners are all reinforced, which prevents them from being crushed in shipment, and the cover flaps are interlocking. Boxes of all sizes can be made in this way.

NEW PIER FOR HANDLING CANAL FREIGHT

Facilities for handling freight at the Atlantic terminal of the Panama Canal were largely increased this winter, when a new pier, 1,035 ft. long and 212 ft. wide, was put in service, although not quite completed. The pier is supported on 212 steel cylinders,

E. Z. WRAP PAPER BOX CO.,
PONTIAC, MICH.

6 ft. in diameter and 125 ft. long, having their tops at water level, which were sunk by open dredging and filled with concrete reinforced by steel rails. Girders composed of continuous steel stringers carry the 11-in. concrete slabs, forming the floor. Of the 237,000 sq. ft. of floor space, 155,000 sq. ft. are inclosed and roofed, the shed being of steel framework with concrete walls and cement-tile roof. A railroad track runs outside along the walls, for handling freight unloaded from ship cargoes. The cost of the pier was \$1,420,000.

3715

WATERING TROUGH DESIGNED TO PREVENT FREEZING

An automatic watering device, invented by a resident of Zion City, Ill., is operated by the approach of an animal to the trough to drink. By keeping the trough empty when not in use, it is said to obviate the difficulty so often experienced in winter by stock farmers, liverymen, and others, through water freezing in the trough. A platform is provided in front of the trough and held in a slightly inclined position by stout springs beneath. When an animal steps upon this platform, the weight depresses it, and a concealed shaft is rotated, which opens an intake water valve and simultaneously closes an outlet valve, allow-

This Watering Trough is Filled Automatically When an Animal Steps on the Platform, and Emptied When It Steps Off. The Operating Valve Mechanism is under the Platform near the Trough

ing water to flow into and fill the trough. When the animal steps off the platform, the operation is reversed.

SPORTSMAN'S BATH TENT ROLLS UP COMPACTLY

The many possible uses for a small bath tent, invented by a Long Island

A Tent Six Feet High and Three Feet Square, Made of a Single Strip of Canvas Which, Together with the Stakes, can be Rolled into a Bundle Three Feet Long and Seven Inches in Diameter

man, make it particularly attractive for canoeists and sportsmen. It can be employed as a bathhouse, stretcher, canoe sail, ground cloth for picnics, etc. The shelter is made of a single strip of canvas measuring 12 by 6 ft. Sewed across it, every 3 ft., are pocket seams through which bamboo stakes are inserted. When the tent is set up these form the four corners. The two ends of the canvas are fastened together by clasps. Each pole is made in two sections, one being doweled to fit into the end of the other half. Guy ropes are provided to keep the walls taut. Rolled up, the tent makes a bundle, 3 ft. long and 7 in. in diameter.

A resident of Alaska is reported to have constructed an aerosled with which he made a trip of 1,100 miles from Nome to Valdez in 72 hours. The journey by dog team requires several days.

POCKET SCREWDRIVER HAS THREE BITS AND A REAMER

The compactness of a pocket screwdriver now on the market makes it very convenient for light work, especially as it is equipped with three bits of different sizes, and a reamer. When not in use these parts are carried inside the handle, which is hollow. The adjustable threaded ring by which a bit is held securely in position for use can be removed from the end of the handle and placed in the storage chamber together with the other parts. When the tool is assembled in this compact manner it is only $3\frac{1}{4}$ in. long.

3 3³ ELECTRIC-BULB LOCK FITS ANY SOCKET

A new lock, which prevents the theft, or temporary removal, of an electric-light bulb from its socket, is of special merit in that it is simple and can be used with any standard socket or bulb. It consists of a thin brass ring of the same diameter as a standard socket, inside of which lies a flat steel spring. A short shank, attached to the ring, is inserted between the socket and end of the bulb when the latter is screwed into place. The flat spring is so placed that a bulb screws in without difficulty, but in trying to turn it in the opposite direction, the spring tends to spread out

and acts as a lock. When a light is burned out it must be broken to be removed. The locks can be used repeatedly and are very serviceable in hotels and various public places.

3410 CLAMPS FOR MENDING BURSTED PIPES

Convenient clamps for quickly and effectively mending bursted water, gas, or steam pipes, are now being introduced among hardware stores and plumbing establishments. The clamps are used in pairs and each consists of a semicylindrical piece of metal having lugs on its longitudinal edges, through which bolts may be inserted. A pair of clamps is placed about the defective portion of the pipes to be mended, with packing of rubber or asbestos underneath, after which the two parts are drawn tightly about the pipe by means of nuts and bolts. In case the break is long, two or more pairs can be placed end to end, with the packing so arranged as to form a continuous tight covering.

3225 COMBINATION TOOL FOR ISOMETRIC DRAWING

A combination drawing instrument has been devised which is particularly convenient in laying out hexagonal and other forms according to the isometric system. In it are cut 10 ellipses, and seven hexagons of various sizes, and two right-angle triangles. The instrument itself is a trapezoid having two right angles and measuring $6\frac{1}{2}$ in. long and 5 in. wide. With the curves and angles which it supplies a suprisingly large variety of figures can be drawn at a great saving of time.

A Rustic Four-Square Shelter House

By H. A. HOOPER

CHIEF among the advantages of the type of square summer house, or shelter, divided by diagonal partitions is the increased seating capacity. Shelter is afforded from the sun and elements under varying conditions in one or more of the sections. Each of the four sides affords entrance to a shelter, and has relative privacy from the adjoining sections. Several houses of this kind were built on a golf course and proved useful and popular.

This construction may be used for houses of various sizes, that shown in the illustration being 16 ft. square, about 30 in. from the ground to the floor, and with 8-ft. corner posts. The height from the lower edge of the roof to the peak is 4 ft., and the eaves have an overhang of 2 ft., giving added protection. Rustic timbers and smaller limbs were used for the structural portions of the house. The supports for the seats and the latticework under the floor were made similarly, of lighter stock. The partitions extend

to the height of the eaves, and are supported at their junction by a post. Standard mill stock may, of course, be used throughout the structure, if desired.

Proper Insulation of Splices

A properly insulated splice should last as long as any portion of the insulation. Apply the tape while the splice is still hot from soldering. Rubber

tape should be put on first, to a thickness according to the voltage which is to be carried. Then apply friction tape as firmly as possible, and heavy enough to withstand wear. The tape should extend on the actual insulation at either side of the plug, otherwise there is a tendency for the wire to break at these points. On small work it is advisable to tear the tape into strips of not more than $\frac{1}{2}$ in., for the best finish. A "whipping," made by winding twine tightly and evenly around the splice for the full

This Shelter House Has a Relatively Large Seating Capacity and Affords Added Protection by Reason of the Partitions

length of the tape, is desirable to produce a high-class finish. Insulation varnish, or shellac, should be applied, but not while the work is at all damp.—W. B. Baruch, Charlestown, Massachusetts.

Radial Pivoted Arm for Shop Light

I recently installed a swinging light which reaches nearly all parts of the shop. It was made by supporting a long rod, $\frac{7}{8}$ by 3 in. at the thickest portion and tapering toward

The Radial Arm is Swung Easily to Various Parts of the Shop and the Light Adjusted on the Wire

the ends, as shown. The arm was set in two brackets suspended from a circular turntable, pivoted at the middle on a bolt. The latter was fixed through a square plate which was fastened to the ceiling joists with screws. The cord for the electric light was carried on insulators which slide along a wire fixed to the lower edge of the radial arm.—R. E. Brown, Portland, Ore.

Safety Spring for the Variety Wood-Molding Machine

The spring shown in the sketch is a safety device, and also satisfactory in preventing vibration, and in holding

This Safety Spring Reduces Vibration and Is Adjustable to a Variety of Work

the face of the work closely against the table top. It is adjustable to various

thicknesses. The block C should be about $\frac{1}{8}$ in. thicker than the piece to be fed into the machine, while the piece D should be enough thicker to insure that the under side of the head of the spring is practically parallel with the table top when the knives are cutting. The wing nuts E hold the spring firmly in contact with the blocks. The adjusting screws, at E, are threaded into the table.

The spring B should be made of from $1\frac{1}{8}$ to $1\frac{3}{8}$ -in. hard wood. The diameter of the circular opening is slightly larger than the extreme diameter of the knives. The neck of the spring should be from 2 to 4 in. wide, and must give a firm pressure. End adjustments are made by the slot, at E, extending to the end. A spline, F, is glued into the rim of the spring, as shown in the section, at G, to strengthen the short grain of the wood. The lower side, at G, is rounded to permit the work to enter easily; the inner edge is flat, and the under side of the head is waxed to make feeding easier. For heavy work, the piece H extends from edge to edge of the table, and is clamped at both ends. The groove in H fits the neck closely, but with sufficient play to permit the spring to move vertically without undue friction.—Charles A. King, East Kingston, N. H.

Repairing a Short-Circuited Armature Section

To locate a short-circuited armature section, pass a current from a dry cell, or storage battery, through the armature, using the brushes of the machine. Using a low-reading voltmeter—a millivoltmeter if possible—touch its lead wires to one pair after another of adjacent commutator bars. A zero deflection of the voltmeter indicates a short-circuited section.

It will be noticed, at periodic intervals in passing around the commutator, that the voltmeter deflection reverses, and that just before this transition point the deflection is less than normal. This merely indicates a passage from one pole to another on the

The Use of This Frame Enables One Man with a Team of Horses to Transplant Trees of Considerable Size

winding. On a four-pole armature, for instance, there will be four such reversals of the meter deflection. Switching of lead wires is all that is necessary to make the meter read in the right direction.

If a short circuit is found, clean out the spaces between commutator bars, to be certain no small bits of metal or copper dust are responsible. Failing thus to locate the trouble, carefully lift out the coil connected to the bars to which the short was traced, and repair any breaks in the insulation. Shellac and silk ribbon are the best materials for this work. Apply the ribbon smoothly, coating it thoroughly.

A broken circuit in the winding itself may be located by connecting a battery through an ammeter to two metal strips, held apart by a piece of wood, at such a distance that they will touch adjacent commutator bars. Holding this device against the commutator, turn the armature slowly by hand. A reduced deflection of the ammeter indicates a broken or open-circuited winding. The only resort, in case of open circuit, is to lift out the damaged coil, solder the ends together, reinsulate, and replace the wire in the slots.—K. M. Coggeshall, Webster Groves, Mo.

Transplanting Large Trees

Trees of considerable size may be transplanted for shade, or decorative, purposes by one man with a team of horses, by the use of the frame shown in the illustration. It is made of 4 by 4-in. timbers, spiked together. A trench is dug around the tree, and the roots cut free, taking plenty of earth with them, as shown in Fig. 2. To get at the lower roots it is desirable to haul the tree to the position shown in Fig. 3, by means of a guy rope hitched to the team. If the tree is too large to be lifted clear of the ground by means of the frame, it may be skidded to a stoneboat, as indicated in Fig. 3. The frame is lashed to the trunk of the tree, and its lower ends set on blocks. A rope is fixed to it near the top, and the tree may be raised to drop on the stoneboat, by driving the team slowly forward. The frame may be used to set the tree into a pit at its new location, by using the frame in the reverse direction. The tree should be guyed to make it plumb, and the earth filled firmly around it, as shown in Fig. 4.—J. G. Allshouse, Avonmore, Pa.

☞ Chalk sandpaper on the back to prevent it from slipping in the hand.

Wrench Adapted Easily for Many Uses

The ordinary monkey wrench, with a few alterations and additions, may be made to serve many purposes other

By the Addition of a Few Simple Attachments the Wrench Is Available for Several New Duties

than that of a wrench and hammer, by utilizing the adjusting feature as a tension screw. It is particularly desirable for automobile purposes, saving both weight and expense. The sketches show a few of the possibilities by providing threaded holes and attachments. If the jaws of the wrench are hardened, it is necessary to anneal them. If the knurled sleeve is not already hexagonal, it is advisable to flatten the sides so as to obtain gripping surface.

An attachment which converts the wrench into a small vise was made as shown. The detachable bracket is provided with a thumbscrew for securing it to the running board of an automobile or other projecting edge. An attachment of $\frac{1}{16}$ -in. rod for converting the wrench into a valve-spring compressor is shown at the left. Attachments used in separating the leaves of an automobile spring to insert lubricants are shown at the right.

An attachment for the making of wire bands or clamps for radiator hose,

bands about buckets, garden-hose connections, etc., is also shown. The sliding jaw has a $\frac{3}{16}$ -in. hole drilled through it and a pin inserted, which projects about $\frac{1}{4}$ in. on either side. The chisel-shaped attachment is grooved for holding the wire. A strong tension by means of the knurled sleeve, before finally drawing up the loop, is desirable.—George A. Luers, Washington, D. C.

Care of Automobile Steering Connections

The leather boots necessary to protect the steering joints of an automobile from mud and water should be given careful attention. Old grease should be removed from the joints when necessary, and the boot cleaned. The joints should be greased thoroughly, and a strip of linen, 3 in. wide, used as an inner covering to retain the grease. The boot is placed over this cloth covering, thus keeping it clean for lacing. The inner covering may be discarded when the joint is again greased.—Alexander Bollerer, New Britain, Conn.

Faucet Tap for Large Cans

Oil cans shipped to an undeveloped region were not provided with a suitable tap, and it

was found inconvenient to run off the oil from a plugged hole. The faucet tap shown in the sketch was devised, and proved convenient. A tapered screw was fitted to the faucet, and inserted through the end of the can by driving in the point and then turning the faucet until it was set tightly. A leather washer was provided to make a close joint. When the can is emptied, the faucet is quickly removed by unscrewing the threaded point, and may be used repeatedly.—Gus Hansen, Peachland, Can.

By B. FRANCIS DASHIELL

SEA WORTHINESS in rough water, simplicity and strength of construction, and fair speed with comparatively low power, are features of the small runabout motorboat, shown in the illustrations and detailed in the working drawings. It is of the V-bottom type, and the high, flaring bow enables it to cut the water with slight pounding or spray. A light-weight motor of 4 hp. is satisfactory, and for greater speed one of not over 8 hp. may be installed with a proper margin of safety, and freedom from excessive vibration. The deck plan is shown in Fig. 7 of the page plate; the structural framework in Fig. 6 in plan, and in a vertical section from bow to stern, in Fig. 8.

Before beginning the work of construction Figs. 6, 7, and 8 should be understood, and then full-size paper patterns are made for the frames A to I, as shown in Fig. 1. The diagram for the transom frame A is shown complete, those for the other frames being given in half section only. Make the frames, other than the transom, of 1 by 3-in. straight-grained oak. The two parts of each side section are bolted

together with a 1-in. piece, 5 in. wide, called a knee, and the two side sections are joined at the keel by means of bolts and a heel, 1½ in. thick, as shown in Figs. 3 and 5. The fastenings are made with ¾-in. bolts, fitted with washers and nuts. Inspect the frames to make certain that they are not twisted, and mark them A, B, etc., as indicated.

The stern frame, or transom, shown in Fig. 2, as viewed in section at J-K, Figs. 7 and 8, is made of oak, cypress, or pine, preferably in one piece, and 1½ in. thick. Two boards for it may be doweled, as shown in Fig. 1. Paint the pins and joined edges with marine glue, and clamp the pieces together to dry. Then shape the transom as shown, and fasten 1 by 2-in. oak battens across it, fastening them with screws, as shown in Fig. 2. Fasten 1 by 2-in. oak battens around and ½ in. in from the edges, to provide a suitable nailing strip for the planking.

The keel is a straight-grained piece of oak, or yellow pine, 3 by 4 in. by 18 ft., as shown in Figs. 6 and 8. Lay it out on a suitable level area for the fitting and assembling of the frames. They are notched over it, as shown in

Sectional Diagrams of the Transom and Frames: To be Laid Out Full Size on Paper Patterns, to Which the Pieces are Fitted Accurately

detail in Fig. 5, and bolted into place through the heel. Countersink the bolt heads. Line the frames up perfectly or trouble will be experienced in producing the desired contour and balance in the craft. Where the propeller shaft extends through or near the keel, it is necessary to fix the frames with two bolts straddling the shaft, as detailed in Fig. 3.

The shape and construction of the stem post, the stem and stern knees, and the method of fastening them into place are shown in Fig. 8, and in detail in Figs. 2 and 9. These parts may often be supplied to the best advantage by dealers in boat stock, in the natural crook, which is most desirable. They may also be built up as shown. To prevent the water from working into the seams of these parts at the joints of the stem and knee, stopwaters are used, as indicated in Fig. 8, and detailed in Fig. 9. They are plugs or dowels of white pine, dipped in marine glue. The stem and knees are bolted to the keel with $\frac{1}{2}$ -in. bolts, after painting the joints with glue.

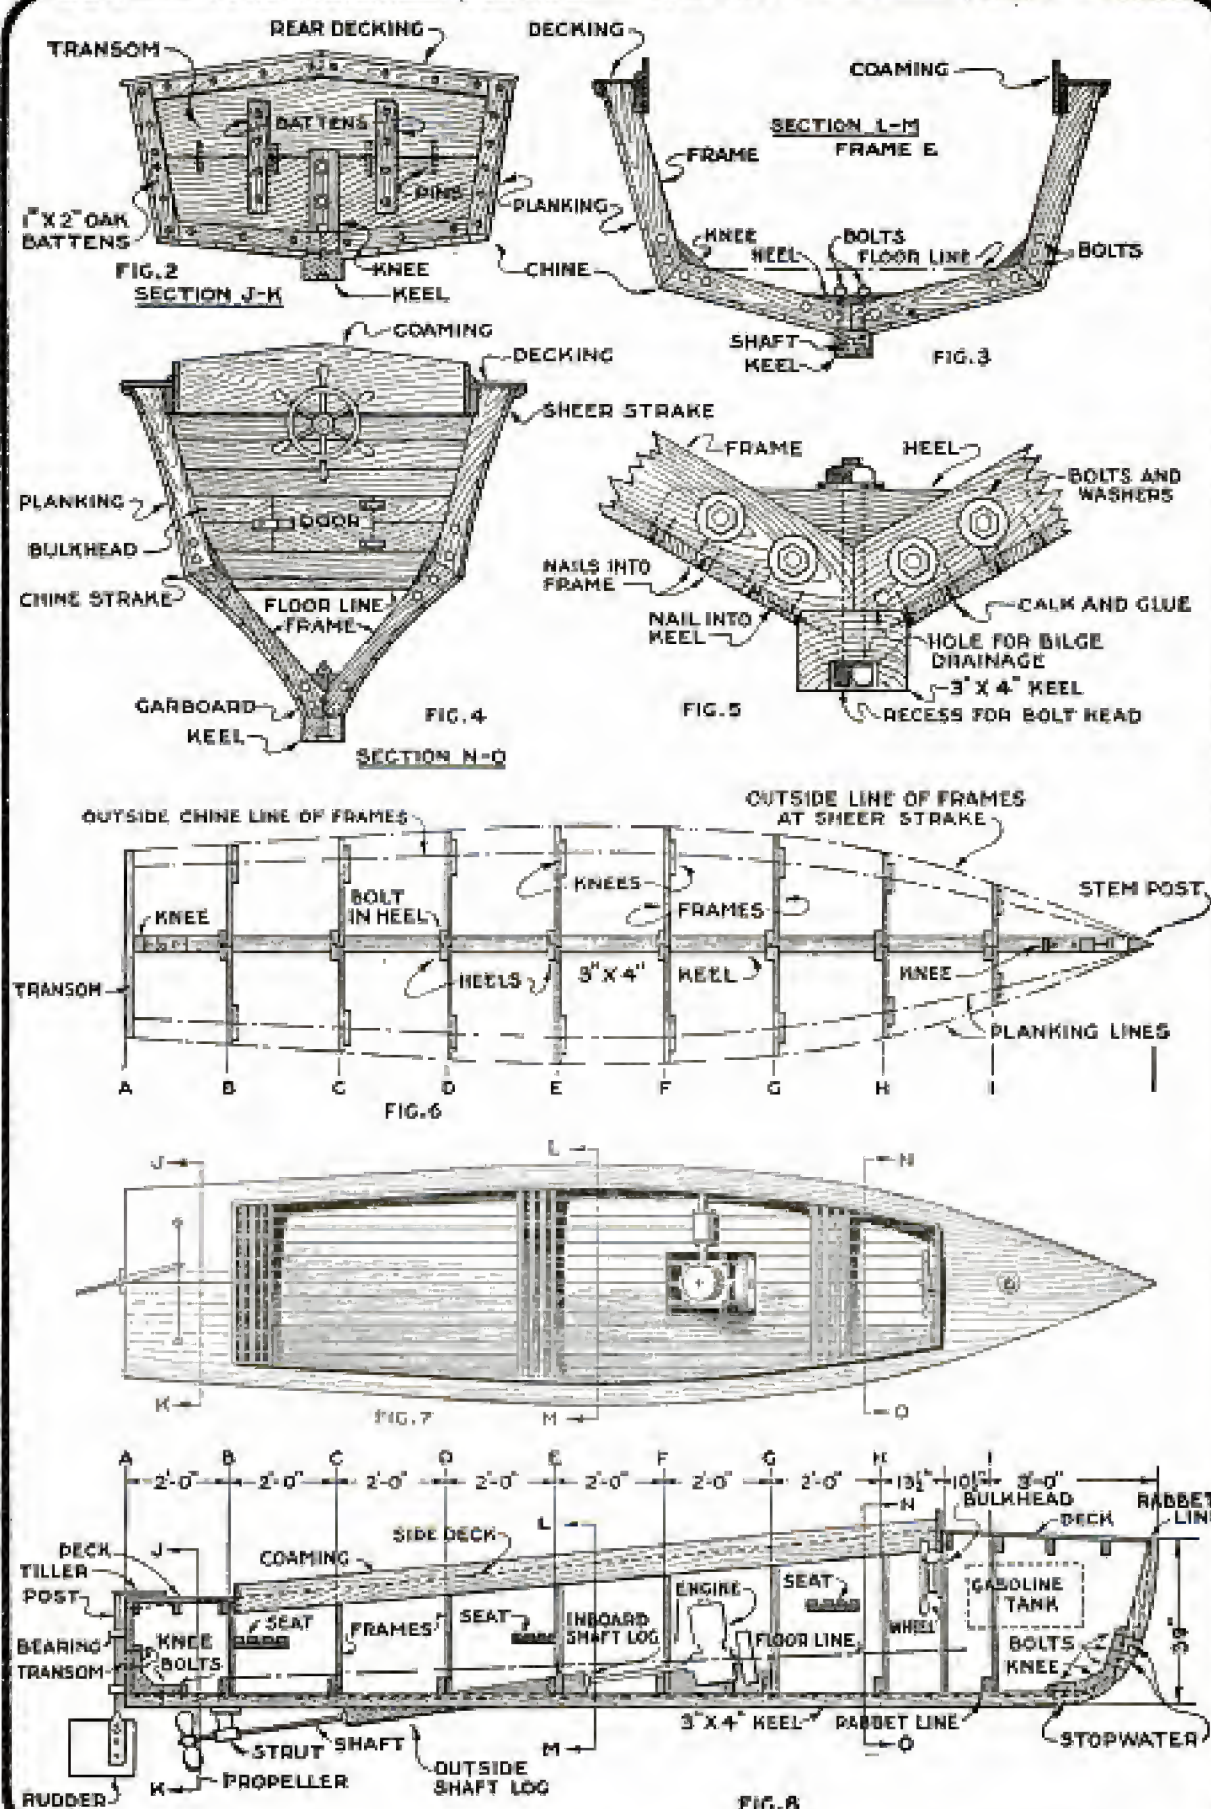

Cut a rabbet, or planking groove, into the stem and stem knee, to provide a suitable nailing support for the planking, as indicated by the dotted line in Fig. 8, and in the stem detail, Fig. 9. Make the rabbet $\frac{1}{2}$ in. deep, to bring the surface of the rabbeted parts flush with that of the planking. The upper corners of the keel are beveled to fit against the garboard, or lower plank, as shown in Fig. 5.

Brace the assembled frame temporarily, and strongly enough to withstand twisting strains. Turn the frame over so that the keel is uppermost, and level it carefully, for the nailing of the planking. The system of planking used is shown in Figs. 2 to 5, and in detail in Fig. 9. The best size for the planks is in lengths of 20 ft. 6 in., so as to give a minimum of end joints. Where short lengths are used, the joints should be supported on blocks on the inside, and the planks butted together. The planking, dressed on both sides, is $\frac{1}{2}$ by $2\frac{1}{2}$ in., though the width may vary slightly, preferably

less than this width. Put on the garboard, next to the keel, first, and fit it to the bevel on the keel, as shown in Figs. 4 and 5. Fit the ends of each plank to the transom and into the rabbet at the stem post. The planks are fitted alternately on opposite sides of the hull. Their edges are beveled slightly to form a close fit on the inside, and to provide a space for calking the seams. Nail the garboards into place against the keel by means of wire finishing nails, sunk edgewise through the plank, as shown in Figs. 5 and 9. Fasten the planks to the transom and the stem post with nails or screws, galvanized, or of brass. Fit the planks carefully to the frame. At the chine strake, as indicated in Fig. 4, it may be necessary to trim the sharp corner slightly to produce a good fit for the planks, as shown in the chine detail in Fig. 9. After all of the planks have been put on, plane the top plank, or sheer strake, flush with the upper ends of the frames. Then turn the hull over on its keel, supporting it with braces. The woodwork of the upper portion may now be installed in part.

Notch the frames to receive a 1 by 3-in. filler piece of oak or pine behind the coaming, as shown in Fig. 3 and in the coaming detail, Fig. 9. Make the coaming of $\frac{1}{2}$ by 6-in. oak, fitting the pieces for it into place only temporarily at first. The position of the coaming at the ends of the cockpit is shown in Fig. 8. The side decking is of $\frac{1}{2}$ -in. oak, or cypress, fastened with brass screws. Fill in the corners with quarter-round molding, as shown in Fig. 9. The forward and rear decks are of the same material, and are supported on deck beams fixed across the hull, as shown in Fig. 8.

The shaft log and engine bed should then be located. The position of the engine is about 7 ft. aft of the bow. Its exact location will vary with different types and sizes of engines, and should be determined carefully to give the proper stability. The engine is mounted on bed timbers bolted to the frame and keel. The engine shaft is carried in a wooden shaft log, fixed on the inside

This Motorboat Runabout was Designed as a Light Craft of Fair Speed with Low Power. The Construction of the Framework and Other Details is Comparatively Simple, and Feasible for the Home Mechanic. The General Arrangement of the Framework and Main Working Parts is Shown in Figs. 6 and 8, and the Deck Plan in Fig. 7

and the outside of the keel, as shown in Fig. 8. If desired, the hole through the shaft log may be bored at a mill which may have furnished the keel and other special wooden parts. Metal stuffing boxes are fitted to the ends of

slightly. The glue does not become very hard, and when set, the hull should be scraped, removing excess glue. The outside should be given two coats of oil primer, and two of finishing paint. Paint the interior parts

also, creosote or asphaltum paint being preferable for this purpose. The cockpit should be painted first with an oil primer and then with a finishing coat. The coaming and decks may be finished with paint or several coats of spar varnish.

The general arrangement of the fittings is shown in Figs. 7 and 8. The metal fittings may best be purchased, but some of them may be made if desired. The location of the gasoline tank in the bow, the seats of wooden strips, the steering wheel, propeller and connections, and the method of fix-

FIG. 9
Details for the Rudder, Coaming, Stopwater Plug, and Other Constructional Features

the shaft log, and the joint of the shaft log and keel is made water-tight with marine glue or white lead, and bolted, as shown in Fig. 3.

The cockpit is finished with flooring and siding, and bulkheads are built at the stern and the bow. The stern bulkhead is made by paneling the frame B, and the forward bulkhead, by building in a partition, as shown in Fig. 8, and in detail in Fig. 4. The siding for the cockpit is nailed to the frames, and the flooring to 1 by 3-in. floor beams. The seams of the decking are calked with marine glue.

The calking of the hull must be done thoroughly to insure that the craft will be seaworthy. Twisted calking cotton is tamped into the seams, as shown in the calking detail, Fig. 9, by means of a calking iron. The calking is covered with a $\frac{1}{8}$ -in. layer of black marine glue. Soften the glue by heating it in a water-jacket container, and force it well into the seams, overfilling them

ing the rudder into place, are shown in Fig. 8. A detail of the rudder and its supports is shown in Fig. 9. The rudder is controlled from the wheel by means of wire-reinforced rope extending from a cross arm at the top of the rudder shaft, around the coaming, and through pulleys to the wheel drum.

Making Cupped Leather Piston Washers

Leather washers, cupped to fit the piston of a pump, were required to make a repair, and were made quickly as follows: The pump barrel was $1\frac{1}{2}$ in. in diameter, and the disks were cut $\frac{3}{4}$ in. larger in diameter. A spool of a diameter two thicknesses of the leather less than $1\frac{1}{2}$ in. was used to form the wash-

ers, as shown in the sketch. The washer is moistened and tied over the spool, centered with a pencil in putting on the strings, and then placed on the same or another spool with a metal ring or strong cord to hold it, as shown at the right, and permitted to dry into shape.—Herbert Consterdine, Hammond, La.

Ridding a Garage of Automobile Exhaust Gas

The exhaust gas from an automobile proved offensive in a closed garage and the difficulty was remedied by installing a pipe with a hose connection to the exhaust pipe of the car, and connecting it to the chimney. This method can be applied to garages having no chimney by the installation of a suitable flue, or outlet.—J. M. Straughan, Sprague, Wash.

Sink for Washing Blueprints

The blueprint sink detailed in the sketch is simple in construction and practical in use.

Four pieces, preferably oak, are made for the sides and ends. A groove is planed near the lower edge so that the tongue-and-groove bottom will fit in all the way around. This groove supports the

bottom, and provides for shrinkage and expansion, avoiding buckling of the lead lining. Two cross strips are screwed to the under side, and a leg is fastened to each by means of brackets. The lead lining is fitted, and the upper edges turned over, and tacked down. Half-round strips are nailed over the lead, and the woodwork finished as desired.

CA spool cut at the middle provides two useful knobs.

Headlight as Emergency Lamp for Operating Room

A surgeon found it necessary to perform an operation after dark, in a

An Emergency Surgical Operation was Performed by the Aid of an Automobile Light

town where commercial electric light current was unavailable. As an open light should not be used in a room where an anesthetic is administered, the electric headlight of an automobile was made to serve. The car was run up to the window of the room; the reflector and bulb from one of the headlights were removed, and after hanging the reflector over the operating table, the wires were run through the window and connections made. To assure proper results, the system was tested carefully, and it was made certain that the storage battery was fully charged. An extra bulb was provided, in case the one in use should burn out. The light proved quite satisfactory, the reflector shading the eyes of the operators, and concentrating the light on a small area, as desired.—Harry M. Kennard, Charles City, Ia.

Raising Level of Gasoline in a Blowtorch

When the gasoline level is low in a blowtorch the pressure causes an excess of air in the burner supply pipe, blowing out the flame. In an emergency, a little water poured into the gasoline will cause the latter to float to a high enough level to operate the torch satisfactorily.

Handling Long Pipes in a Small Shop

Pipes, long rods, and similar pieces, are difficult to handle in a small shop.

A 4-in. pipe, fitted through the wall of a small plumber's shop, made it possible to thread pipes of considerable length without

bringing them into the shop. The pipes were drawn through the opening in the wall and clamped at one end, as shown. To thread the opposite end it was necessary only to reverse the pipe. When the opening was not in use, its ends were covered with pipe caps.—W. P. Langreich, New York, N. Y.

Holder for Slip Stones

Slip stones of good quality are fairly expensive, and easily broken if left to lie about the bench or machine. They may be kept safely and conveniently in a block like that shown. The grooves of several sizes are chiseled into the block, which is as long as the longest stone to be fitted into it. The ends are guarded with strips of wood.—Henry Wedde, Chicago, Ill.

Cutting Porcelain Insulators

Considerable difficulty was experienced in cutting round porcelain insulators used in electrical work. The job was satisfactorily accomplished as follows: A piece of flat, cold-rolled steel, twice as wide as the diameter of the insulators and of the same thickness as the smaller insulators desired, was procured. A small hole, A, was drilled through it,

and a slot C cut from the end to the hole, with a hacksaw. The hole B was drilled the same size as the insulators. The latter were then clamped in the hole B, in a vise. With a blow of a hammer on a cold chisel, set on the upper surface of the steel strip, the insulators were cut neatly, and to the proper height, the same as the thickness of the strip. In half an hour, 500 insulators were cut, with only eight damaged ones. Carrying on this method of cutting under water, produced better edges on the insulators.—George N. Garrison, East Orange, N. J.

Device for Cutting Tire Fabric on Bias

A wet knife instead of shears is used in cutting tire fabric on the bias in a large plant. A straightedge of hard wood, to which two 45° guide blocks are fastened, reaches across the table, as shown, and is used as a guide in cutting. The straightedge is held at the proper angle by keeping the guide blocks against the edges of the table.

Painter's Brush Preserver and Carrier

A wood finisher and painter constructed the receptacle shown in the sketch to keep his paintbrushes in good condition, and also for use in carrying them to and from his work. The container is 12 by 6 by 6 in. in size. It is fitted with a raised cover, 4 in. deep, hinged to one side. The cover is built to fit inside the container somewhat like the cover of a dinner pail. Two hooks hold it in place, when being carried by means of a handle. A small hole is bored in the

middle of each end, about 1 in. from the top edge. A stiff wire is passed through the two holes, leaving a little to spare at each end. Holes are bored through the handles of the brushes and the latter strung upon the wire. Sufficient oil or turpentine is poured in to immerse the bristles completely.—L. B. Robbins, Harwich, Mass.

General-Utility Sawhorse

A sawhorse which will serve the purposes that two ordinary sawhorses serve in many instances is shown in the sketch. It may be built quickly of stock timber, and of a size suited to particular needs, the dimensions indicated being suitable for work of average size in carpentry. If desired, the construction may be made more permanent by fastening the pieces together with screws, making housed joints where the legs are fixed to the main piece, and bracing them securely below. A convenient height for the sawhorse is 22 in., and a length of about 8 ft. is satisfactory. The work is supported on this device at three points when ripping, making the frequent shifting of the board to get a solid backing unnecessary. The center board is made shorter than the end pieces, so that it will not interfere in ripping, yet

give a support at the middle. This is especially handy in ripping long narrow strips.—Harry Simon, Laguna Beach, Calif.

Coiling of bearings by an occasional flood of oil is wasteful and inefficient.

Trolley Tool Rack for Shop or Laboratory

A trolley tool rack made up of a tray suspended from a two-wheeled

The Tool Rack and Tray is Moved to the Point
Where the Tools are Needed by Shifting
It on the Cable

hanger on a rod or stiff wire is convenient in bringing tools to the point where the work in hand is being done. The device may be placed above a long bench or adjacent to a row of machines, and has other uses even in such work as electrical installations. The rack proper consists of a board, $\frac{7}{8}$ by 14 by 28 in., around the edge of which holes of various sizes are bored for the tools. A frame, 2 in. high, provides a tray. A piece of 2 by 4-in. stuff supports the tray from the hanger.—R. E. Edward, Seattle, Wash.

Preventing Breaking of Plaster by Door Knobs

A 6-in. square of sheet cork, or composition, of the same thickness as the plaster, may be used, at the point of contact, to prevent the breaking of plastered walls by door knobs when no stops are provided at the floor. This method was used with success in a repair job and the patches of composition board were painted over the same color as the wall.—E. L. Thomas, Pittsburgh, Pa.

An Adhesion and Impulse Engine

The rotary-fan type of power mechanism shown in the illustration was

Steam is Forced from the Injector at High Pressure, and, by Adhesion as Well as Impulse on the Convolute Blades, Relatively High Power is Developed

designed and built to apply a moving jet of steam economically to a set of blades, making use of the impulsive force as well as the adhesion of the gas in contact with the peculiarly shaped blades. A jet of steam is forced at high pressure into the chamber from the fan-shaped injector connected to the supply intake. The steam comes into contact with the convolute blades and is carried toward the center of the chamber where the blades converge, passing out into the discharge tube. The curve of the blades is such that the maximum rotary propulsive force is obtained from the steam pressing against them. The device develops a relatively high power on the shaft, the openings through which the steam escapes being designed so that the gas is held in the chamber under sufficient pressure to produce the maximum power, without retaining it long enough to permit condensation.

The chamber is built up of a metal shell, having a circular plate riveted to its open side, and bearings cast as part of the shell and cover, as shown in the sectional view at the right. The injector is fitted in the top of the chamber and is fan-shaped, the width of the

chamber. The revolving wheel, housed in the chamber, is of sheet metal and fitted with a solid shaft on the left side, as shown in the sectional view, and a hollow hub, for the discharge of the steam, on the right. Eight convolute blades are fitted between the side plates of the wheel, and openings are provided between them to permit the steam to escape into the hub discharge tube.

The steam enters the chamber under pressure and is forced against the outer edge of the convolute blades, reacting against the curve and being carried toward the hub. I have obtained very high speeds with the device, and this seeming disadvantage was readily overcome by increasing the proportionate size of the wheel. It has given satisfactory results as a water motor, and when the wheel is well under way, and the chamber is filled with water in revolution, the power derived has been found to be large in proportion to the water pressure. This is caused by the centrifugal action of the water, the resulting power being applied largely upon the curved blades rather than upon the inner surface of the chamber.—J. S. Zerbe.

Hotel Empire, N. Y. C.

Soapsuds Reduces Carbon Deposit in Compressor

Trouble was experienced with an air compressor, due to the accumulation of carbon in the cylinders, and after several methods for removing it had been tried unsuccessfully the feeding of soapsuds into the cylinders from an oil cup was suggested. While it did not prevent completely the formation of the carbon, the compressor could be run much longer without cleaning, and when it was shut down the deposit was found to be soft and easily removed. The soapsuds were introduced into the cylinder for about one-half hour once a day, and the feed from the oil cups was increased at this time.—T. S. Burns, Elmira, N. Y.

A Homemade Concrete-Tile Machine

I built this tile machine for a farmer who made concrete drain tile in his spare time. The machine may be of various sizes, this one being for tile of 6-in. diameter, 1-in. wall, and 12 in. long. Heavy galvanized sheet iron, 12 by 26 in., was bent to a circular shape, and an internal diameter of 6 in., for the form A. The ends, at J, overlap 2 in. Make two straps, B, $\frac{1}{8}$ by 1 by 8 in., and bend eyes for the rod D, of $\frac{3}{8}$ -in. iron. Make two 4-in. pieces, E, similarly, and rivet both sets to the form A, as shown. Bend the $\frac{3}{8}$ -in. iron rod D into shape and fasten it to the bands B and E. Make a hopper for the top, completing the outer form A.

Sheet metal, 14 by 12 in., is used for the inner form F, which is 4 in. in outside diameter. Rivet on, as shown, four straps of iron, C, provided with eyes, for the rod H. This rod is arranged so that, when the end H is set as shown, the outside diameter of the core is 4 in., and when released, becomes less. Make a cap, G, used only while filling the mold.

To use the machine, the form A is set on a suitable board, and the core F centered. The latter is then expanded, and the cap and hopper are put on. The concrete mixture is tamped in, the

A Farmer Made Concrete Tile for His Land in Spare Time by Means of This Simple Machine

core is released by the handle H, and removed. The form A is taken off by releasing the rod D, leaving the tile on the board to cure.—R. S. Matzen, Fort Collins, Colo.

Weather Curtain for Converted Sleeping Room

The arrangement shown in the sketch served to convert an ordinary bedchamber into an out-of-door sleep-

The Curtains are Held Taut and Rolled by the Center Cord Fixed to a Sash Weight

ing porch. The windows were removed from their frames to give plenty of fresh air. An awning was necessary to protect the room from the weather and to screen it properly. The awning cloth, pulleys, cord, and bearings for the rod were obtained at an awning store. A curtain pole served to wind the canvas; brass hinge pins, slipped through standard awning sockets and made fast in the ends of the pole, provided excellent bearings for the pole to revolve upon. The problem was to find some means of rerolling the awning automatically and keeping it stretched taut in the wind. To do this, one of the counterweight cords in the window sash was extended, wound around the awning pole in a direction opposite to that of the canvas, and made fast. The awning proved effective and strong.—Jack Bechdolt, Seattle, Wash.

Repairing a Damaged Universal Chuck

A universal lathe chuck was broken, as at A in the illustration, two of the jaws being ineffective. It was thrown

New Grooves were Cut in the Jaws to Fit Plates Fixed to the Face

into the scrap heap, and I repaired it as follows: New grooves, C, were cut on the sides of the jaws of the same size as the old grooves B, the jaws being annealed. A plate of soft steel, to fit groove C, was made of the same diameter as the face of the chuck, and a center hole cut in it. It was drilled, tapped, and counterbored, as at H, at the left, and fastened with screws. Three slots, G, were milled in the plate to correspond with the old guides for the jaws, thus forming the plate J. The jaws were fitted in the grooves G, and the chuck gave good service.—Richard H. Jehlicka, Worcester, Mass.

Making a Loose Wooden Thread Fit Tightly

A loose handle, which was threaded into a mop, was tightened by driving a row of nails around the worn threads so that the fit was snug. The handle could be removed easily, just as if the threads were their original size. Nails with small or rounded heads are best for this purpose.—Charles L. DeCou, Los Angeles, Calif.

The Manipulation of Gold Leaf

An old Pittsburgh sign painter told me how he used to sit on the bows of the river boats and gild the figure-heads, with much of his gold leaf blowing away. Finally he thought out this method: After removing the first leaf of gold, and thus exposing the next one, he turned over the paper leaf separating the gold, exposing as much of the gold leaf as he required for use, and, running his forefinger nail along the creased paper, cut the gold, after which he lifted it up on the tip. This is the method used generally today by sign painters, and many others who use gold leaf.

In gilding on glass, it is necessary to size the surface with water size, flowing plenty on until it runs off in quite a stream; onto this the expert swings his leaf, and it lands somewhere on the outlines of the lettering—he is not particular just how accurately, so that the letter is covered; and when he has all the letter spaces covered, with perhaps a great deal of space not included within the letters, he permits it to become dry. The leaf settles down flat on the glass.

There are several brands of gold leaf, grading according to amount of pure gold contained and the intended use. One variety is made expressly for gilding on glass, another for gilding on wood. The difference is mainly in the degree of thinness. One layer of leaf makes a good job on wood, while on glass two layers make a better job than one. For exterior gilding the medium shade of gold leaf does best; the pale-colored leaf contains silver, hence tarnishes from gas or smoke.

Water gilding is that in which the leaf is laid on a size composed of isinglass, or glue and water; oil gilding is done on a size composed of oxidized linseed oil. Water size is for gilding on glass, and oil size for gilding on wood. Oil size may also be used on certain textiles, and other surfaces, just as water sizes are sometimes used in decorative work. Water-size gilding is burnished as soon as the size and

leaf are dry, by rubbing with a wad of raw cotton; the same with oil-size gilding. One book of gold leaf will gild $1\frac{1}{2}$ sq. ft. of surface.

Varnish impairs the luster and color of gold leaf. If varnish must be applied, first coat it with pale shellac.

Gold leaf is injured by dampness and cold. If gilded work is varnished before it is perfectly dry it will show scratches. To avoid this, apply a thin coat of white shellac, which will soon dry, and upon this the coat of varnish may be laid. To remove gold leaf from any part where not desired, as in letter gilding, or lining, use a dampened chamois skin.

In oil-size gilding, if the size is too fresh it will drown the gilding or injure its luster. Better have the size too dry than too wet. If too dry, breathe upon it, which will give sufficient "tack" to the size to hold the leaf.

Where two pieces of leaf overlap they will often cause a joint to show, and this may be removed by gently stippling it with the tips of a bristle brush. To prevent laps showing on very smooth surfaces, have the size quite tacky. When gilding becomes dull from gases and smoke, its color may be restored by a weak solution of sulphuric acid.

To gild carved wooden letters, dip them into a thin priming paint, made from white lead and raw linseed oil, with a little drying japan. Then hang them up to dry. When dry, sandpaper smooth, using steel wool for getting into the curves. Next apply a coat of paint thinned out with turpentine and containing a little varnish. When dry, sandpaper lightly to smooth the surfaces and apply another coat of flat paint. When this is dry, apply a coat of shellac, to insure a perfect surface. Use a slow oil size. Then gild, when of the right "tack."

To prevent gold leaf from adhering where not wanted, as when letters of gold are to be made on a painted, or other, surface, a raw potato cut in two, and rubbed over the parts that are to resist the leaf, may be used.—A. Ashmun Kelly, Malvern, Pa.

A Double-Hood Roadster Automobile

A novel automobile which proved very convenient in "trouble shooting" at a garage, and which was also used

This Car was Dubbed "Automobile Janus" by Reason of Its Two "Faces"

for local advertising purposes, was made by rebuilding a car to have two hoods, seats, and steering columns, as shown in the photograph reproduced. The extra fittings were bought at small cost, and this arrangement provided for the gasoline tank under the rear hood and gave plenty of space for tools, etc. The entire body was painted and striped in orange and black. In towing disabled cars one man faces the car being towed, and can readily inform the driver, if need be.—A. P. Swaidmark, Concord, N. H.

Adjusting Drawer Key to Insure Privacy

Where the locks in a cupboard or similar place are alike, and it is desired to make one of them private, a simple and efficient device is to saw off a piece of the key, about $\frac{1}{16}$ in. long. Force this washerlike ring down tight over the post of the lock in the keyhole, as shown. This key will unlock the lock, but when another is tried it will not go far enough into the lock to turn.—Oliver Higgins, Napoleon, Ohio.

Improved Frame for Broken Eyeglasses

In an emergency, when a pair of glasses was broken, and it was found difficult to get along without them, a pair of old lenses, broken at the fastenings only, was fitted into a frame made of cardboard. The frame was made of the proper size so that the lenses were centered over the eyes, and the lenses were glued to it. Bows were made of wire and fastened in holes at the ends of the cardboard. This improvised frame gave reasonable satisfaction, in spite of its peculiar appearance.—A. B. Wegener, Madison, N. J.

Folding Bracket for a Ladder

Pails, brushes, or other tools and materials used in working from a ladder, may be supported conveniently on folding brackets like those shown in the sketch. They are hooked to adjoining rungs and a board is fastened across them. When not in use they are folded out of the way, or removed from the ladder. They are made by forming a hinge joint in two strips of iron, as at C. The upper end A and the lower end B are curved to fit the rung without slipping off easily. The upper strip D is drilled to provide a fastening for the shelf.—James E. Noble, Portsmouth, Canada.

ⒸA washer placed around the neck of a bottle containing poison marks it effectively.

Small Cutters or Dies Kept on Safety Pins

In the tool-dressing department of a machine shop there are usually many small parts, such as dies and cutters, to be ground. In order to keep the sets together, it was found convenient to place them on large safety pins made of spring-brass wire.—J. R. Minter, Washington, Ind.

Protective Flap for Drawers of Drawing-File Cabinet

Drawings, tracings, etc., are wrinkled when the drawers of the file cabinet become so filled that the contents catch on the bottom of the next drawer above. The sketch shows how to avoid this by attaching a flap of flexible cardboard, or canvas, as indicated. Bind the front edge with a $\frac{1}{2}$ by $\frac{3}{4}$ -in. strip and provide handholes along it. Metal corner plates prevent the flap corners from lifting when they are tucked in. When selecting a drawing from the drawer, hang the flap on the knob of an upper drawer.

Stand for Stacking Irregular Castings

A stand which prevents breakage of irregular-shaped castings and economizes space is shown in the sketch. It may be made of a size suitable to the castings to be stacked upon it. The base is a plate of cast iron and into it is threaded an iron pipe. A number of pipes may also be arranged on one base.—E. A. Binney, St. Louis, Mo.

Formula for Calculating Automobile Speeds

It is often desired to calculate the speed of an automobile, the engine speed, gear ratio, etc., being known. The formulas ordinarily used are long and involved, with considerable possibility of error. The following formula will make the calculation easier. The abbreviations used are: S, speed of car in miles per hour; s, speed of motor, in revolutions per minute; R, gear ratio; T, diameter of tires on rear wheels, in inches; K, a constant, 336, by which the process is shortened.

Tracing the power from the engine through a known gear ratio, R, the speed of the rear axle will be $R \times s$ revolutions per minute. Each wheel has a circumference of 3.14 multiplied by the diameter, or $3.14 \times T$ in., which is $3.14 \times T \div 12$, if reduced to feet.

The car will be propelled a distance equal to the circumference of the wheels, with each revolution of the rear axle. Thus, to find the distance in feet traveled in a minute, multiply the speed of the rear axle— $R \times s$ revolutions per minute—by the circumference of the wheels— $3.14 \times T \div 12$. To change this rate to miles per hour, before dividing by 12, multiply the result by 60, and also multiply the 12 by 5,280. Reducing this result, it is found that the process may be simplified so that T multiplied by R, multiplied by s, and the result divided by 336, gives the speed in miles per hour. Thus 336 is established as the constant K, for use in shortening the calculation. The formulas, carried through the above process are:

$$S = \frac{60 \times 3.14 \times T \times R \times s}{12 \times 5,280} = \frac{T \times R \times s}{336}$$

$$\text{or} = \frac{T \times R \times s}{K}$$

as outlined in the detailed process above. — Claude Schuder, Takoma Park, D. C.

Ⓐ bundle of short strings, or cords, bound together can be used as a brush or swab.

Shop-Order Box Saves Time of Workmen

To facilitate the work in a large railroad roundhouse, the jobs for the

The Workmen Take Their Orders from the Box Instead of Having the Foreman Deliver the Cards to Them

various workmen were assigned by means of a card system. By placing the cards in an order box, subdivided for the various kinds of work, much time was saved, since the workmen removed the cards from their department files when passing the box, which was situated in a convenient place.

Oil Cups Remodeled to Adjustable Feed

A number of plain oil cups were changed to a satisfactory self-feeding type at little expense as follows: The hinged cap of the oil cup was tapped for a $\frac{5}{16}$ -in. cone-pointed setscrew, and a locknut applied to prevent the screw from jarring loose. This screw acted as a needle valve, seating on the edge of the small hole in the bottom. A hole for filling the cup was drilled through the cover, and the latter was then sweated fast. A feed as slow as one drop in ten minutes was obtained, and when once set for its particular purpose, the valve needed no further attention.—D. A. Hampson, Middletown, N. Y.

Illuminated Flag Remains Unfurled

On days when there is only a slight wind blowing it is difficult to make a large flag remain unfurled unless it is

The Flag Remains Unfurled Even in a Light Breeze and is Illuminated at Night

supported. The device shown in the illustration, which is a permanent fixture of the staff, combines this feature with the illumination of the flag. A frame made of a piece of pipe, curved to cause the flag to have the appearance of being blown in a breeze, is supported at the top from the flagstaff. A vertical section is fixed to this and attached to the staff at its lower end by a short piece of pipe. The flag is suspended from the pipe by rings. Shaded lights are arranged along the staff to move with the flag in a change of wind.—L. E. Crane, Hastings, Minn.

Carrying Storage Battery in Tool Box

Motorists are often cautioned against carrying a storage battery in a tool box

Space was Economized by Incasing the Battery in the Tool Box, without Injury to the Tools

because of its injurious effect on tools, clothes, etc. Sometimes the tool box

is most convenient for housing the starting and lighting battery, and this problem was solved as shown in the illustration. A wooden box was made, to hold the battery, having a tight-fitting cover, and painted inside with asphaltum acid-resisting paint. A sheet-lead pan was made to fit the bottom of the box, and provided with a drain pipe of lead, discharging to the ground. A lead-pipe vent passed through the side of the steel case to allow the gases to escape. The wires passed out through rubber packings in the front of the battery box.—Victor W. Pagé, Bristol, Conn.

Positive-Grip Hose Coupling

In order to splice, or mend, various kinds of rubber, or fabric, hose I made the coupling shown in the illustration. The central section is a brass union having corrugations at the end and a threaded portion at the middle. The ends of the hose to be joined are held in place by two caps having a hexagonal nut at one end, the latter threaded to fit the center portion of the union. The caps are slipped over the ends of the hose, which are fitted snugly on the corrugation. By drawing up the cap, a close joint is secured.—E. E. Burnham, Amite City, La.

Electric Drier Used in Drafting Room

A portable combination heater and fan, such as is ordinarily used by barbers, was employed successfully for the drying of ink on tracings and drawings, and for drying prints and mounted sheets in a drafting room. This kink saved considerable time in inking drawings, as it was not necessary to wait long for the ink to dry.

Drum in Table Top for Listing Merchandise Sales

A clerk in charge of daily-sales reports found that much time was used in sorting over the twelve forms required, even though cards of different colors were provided. Heavy stock was necessary for the cards because of the wear on them. By the installation of a homemade revolving drum, set in the top of a table as shown, the work was done in one-half the time formerly required, and the cards were discarded in favor of forms printed on thinner paper.

The device was made as follows: Two flat-rimmed wheels were used as the foundation for a drum built up of laths. The drum was mounted on an axle and this in turn supported at its ends in lugs bolted to the framework of the table. The upper portion of the drum was exposed through an opening in the table top, and the blank forms were inserted on the drum, which was covered with several layers of wrapping paper. The drum was revolved easily to get at the various forms to

Economy of Time and Blank Forms was Effected by the Use of This Drum, in Listing Sales

which reference was made hundreds of times each day in keeping check on the quantity of stock disposed of.—John P. Lyons, Chicago, Ill.

An Electrical Water Gauge

The house water-supply tank on the twelfth floor of an office building was a source of trouble to the engine crew in the basement, because of its small size, and the variable rate at which the water was used. An electrical indicating device was constructed, as shown, in which the consecutive lighting of 5-cp. lamps, located in the en-

gine room, denoted the water level in the tank in units of 1 ft. The tank was tapped close to the bottom and a piece of 1-in. pipe inserted with locknuts

Engineers in the Basement were Enabled to Note the Height of Water in a Tank on the Twelfth Floor by Means of This Device

and rubber washers; an ell and a nipple were placed on the end of the pipe. One end of an S-shaped glass tube was made water-tight in the nipple by means of plaster of Paris. Six wires, taped together, having $\frac{1}{2}$ in. of the insulation removed from the end of each, and bent at right angles, were taped to the other end of the tube. Mercury was then placed in the first bend of the tube, and oil in the second bend. When the device was connected to the tank the resulting water pressure forced the oil into contact with the mercury, balancing a column of mercury against a column of water. The oil provided an insulation between the mercury and the tank, and maintained its position because it is lighter than mercury or water, and mixes with neither.

The contacts for the various lamps were made through the longer wire, which was submerged in the mercury. As the water level became higher in the tank, the mercury was forced to a correspondingly higher position, making contact for the lamps in order. The distance between the wires is $\frac{3}{8}$ in. A pipe cap, drilled with a $\frac{1}{16}$ -in. hole, was placed on the end of the pipe in the tank, to prevent the surge of the water from disturbing the mercury. The glass tube was supported by felt pads in a hinged-cover box.—E. E. Stevenson, Los Angeles, Calif.

Lowering Concrete Pipes into Well

In replacing a wooden well casing with concrete pipes, 30 in. in diameter, weighing 2,000 lb. each, and weighing

it. The smaller rope was passed through a hole adjoining. The board A was wedged into place in the pipe, at the top of the well. The cover B was set into position, with the ropes as shown. The heavy rope was fixed to the windlass. The pipe E was lowered into place, on the pipe F, and the rope D drawn up, releasing the piece A and the cover, which were drawn up for the next pipe.—Arthur E. Shaw, Columbia, S. C.

Line Guide for Lettering

A guide for lettering on tracings, that will aid in making the letters uni-

is inserted under the tracing to be lettered and shifted to various positions

as required. An advantage in using a strip of tracing cloth rather than a piece of paper is that the former may be set in relation to a drawing being traced, without obscuring it.—Samuel Kaufman, Philadelphia, Pa.

Garden Hose on Rim Makes Ash Can Noiseless

Tenants in an apartment house were annoyed by the removal of metal ash cans in the early morning hours. The janitor took lengths of old garden hose and bolted them around the rims at the bottom of the cans, providing a noiseless pad. When the hose became worn it was replaced.—M. J. Schramm, Ridgewood, N. Y.

Babbitt Collar Overcomes Loose Pump Plunger

In a heating system a vacuum pump was used to return the condensation to the boiler room. It did not give satisfaction, and on inspection it was found that the water had corroded the follower, as at A, to such an extent that the packing had pulled through and worked into the valve seat. Not having a lathe, some other means of repairing the plunger was required, and the follow-

ing method proved successful: The follower was trued up on an emery wheel and the edge ground concave, as at B. A mold of wood, C, was made the same size as the pump cylinder and of the same thickness as the follower plate. The latter was centered in the mold, babbitt was poured around it, and after fitting slightly it has given complete satisfaction.—A. P. Sitton, Fort Stanton, N. M.

ⒸThe surface of metal to be electroplated should be free from scratches or imperfections, since the plating will not hide them.

Combination Camp-Kitchen Cabinet and Table

By J. D. BOYLAN

THE combination camp-kitchen cabinet and table is the result of not being able to take the members of my family on an outing unless they could have some home conveniences on the trip, and perhaps the sketch and description may help solve the same problem for others. The table will accommodate four persons comfortably, and extra compartments may be added if desired. The cabinet, when closed, is strong and compact, and if well made with a snug-fitting cover, is bug-proof, and the contents will not be injured greatly, even though drenched by rain or a mishap in a craft.

For coffee, tea, sugar, salt, etc., I used small screw-top glass jars. They are set in pocket shelves at both ends. When closed, one can sit on the box or even walk on it if necessary when in the boat, and if an armful or two of coarse marsh grass is spread over it, the contents will keep quite cool, even when out in the hot sun. When open for use, the metal table top *F* is supported on metal straps, *E*, which also act as braces and supports for the table

leaf, *G*, on each side of the box. This affords plenty of table surface and one can easily get at the contents of the cabinet while cooking or eating. The legs, *D*, are stored inside of the box when closed for traveling. They are held in place under metal straps when in use, and held at their upper ends by the metal plate and blocks, *B* and *C*.

The bent metal pieces, *A*, on the ends of the top, spring over the blocks at *B* and *C*, and form the handles.

A Homemade Life Buoy

A serviceable circular life buoy may be made by sewing together rings of canvas, filling the resulting form with ground cork, and waterproofing the covering. Cut two disks of canvas about 30 in. in diameter, and cut out a circular portion from the center of each, about

12 in. in diameter. Sew the pieces together at their edges, leaving a small opening at a point on the outer edge. Fill the cover with cork used in packing grapes, and sew up the opening. Paint the buoy thoroughly, with white lead, and attach hand grips of rope.

This Outfit Provides Accommodations for Four Persons, and Folds Compactly

A Folding Table with Split-Bamboo Tray for Top

A folding table frame, designed as a support for a circular split-bamboo tray, is shown in the photographs re-

produced and detailed in the working drawing. It is a serviceable and inexpensive piece of furniture, and can be constructed readily by the home mechanic. As the trays vary in size, the frame must be made to correspond, those from 24 to 28 in. in diameter being satisfactory. The tray may be made by the ambitious craftsman or pur-

chased at stores dealing in Oriental goods. A wooden top may, of course, be substituted. The frame is made

preferably of soft wood. The following finished pieces are required for a 24-in. tray: 4 legs, $\frac{7}{8}$ by 3 by 30 in.; 4

crosspieces, 1 by 2 by 25 in. Mortise the legs to the ends of the crosspieces, one set of mortises being $\frac{7}{8}$ in. below the other. Assemble the parts and fasten the joints with glue and 2-in. flat-head screws, countersunk.

Adjust the crosspieces of each set so that their centers match, and fasten them in this position with screws, from the under side. The two parts of the frame revolve on them when the table is "knocked down." On the ends of the lower crosspieces of each set, fasten blocks to level the support for the tray. Finish the frame to harmonize with the furniture of the room. Conceal the screw heads under bands of hammered or oxidized copper, fastened with copper or brass pins. A second tray may be placed on the lower crosspieces.—F. E. Tuck, Nevada City, Calif.

Small Desk Lamp Supported by Paper Weight

Those who wish a small desk light that may be pushed back out of the way in the daytime, will find the accompanying sketch of interest. When in use on a roll-top desk, the lamp is placed on top near the edge, so that the bulb overhangs. A 25-watt lamp will light the bed of the desk, and the small metal shade is so placed that no part of the bulb is visible to the eye of the worker. By providing a suitable base, the lamp may be adapted to other uses.

A stock paper weight, about 2 in. in diameter and covered with green felt, was used as a base. An ordinary drop-cord socket is provided, and to one side of the top cap, a strip of brass, $\frac{1}{16}$ by $\frac{1}{2}$ in., is soldered. A hole is drilled near the end of this strip so that the screw which holds the knob will also hold the socket. Connect the flexible cord in the usual manner.

The shade is made of sheet metal,

bent in the form of a cone, having the front shorter than the opposite edge. Make a sketch of the bulb, and determine the lengths of the two sides A and B, and then draw two concentric circles of corresponding radii on paper, as indicated in the small diagram. The proper curve for the shade will then lie between these two circles. Cut a paper pattern, and form it into a cone. After the proper shape is determined, mark it on the metal, cut it to shape, and solder it. A small spring clip, C, engages the tip of the bulb; the back of the shade is held by a piece of spring wire, D. It is easy to spring the shade off in replacing the bulb. The outside of the shade should be enameled an olive-green.—John D. Adams, Phoenix, Arizona.

Device Frightens Flies at Screen Door

An effective means of frightening flies away from a screen door may be made from a spring curtain rod and cotton duck. Scallop of 8-oz. duck, 6 in. long, are fastened to the pole, on opposite sides, as shown. The ratchet on the end of the pole is arranged so as not to catch. A small cord is wound

The Scalloped Roller is Revolved Rapidly When the Door is Opened, Frightening Flies

around the pole and fastened to the screen door. The rod supports are fixed near the top of the door frame.—Josef H. Noyes, Paris, Tex.

Porch Swing Made from Automobile Seat

When an obsolete type of automobile was converted into a truck for

The Seat Discarded from a Rebuilt Car was Put to Good Use

marketing purposes, a leather-upholstered seat, discarded, was utilized as an attractive and comfortable porch swing. Hooks were secured to the front corners of the seat and to the upper edge of the back, for the chains attached to suitable supports.—George L. Ayers, Washington, D. C.

Linoleum Panels for a Homemade Chest

A strong packing box was converted into a useful and not unsightly chest by covering it with panels of linoleum left over from a job of covering a floor. Strips, $\frac{1}{2}$ by 2 in. wide, were nailed around the corners of the box to form a panel on the top, sides, and ends. The wood and the linoleum were shellacked, and made a good appearance.

ⒸThe lower corner of an envelope may be used as a small funnel.

Camera for Bird Photography

A reasonably large image must be obtained in photographing bird life, or the details of plumage and identifica-

Bird Images Large Enough to Show Identification Markings are Obtained with This Camera

tion are lost, reducing the value of the pictures. The "gun camera" shown in the photograph was devised for this purpose, and with it exposures may be made more quickly than with the telephoto type of camera, a feature of great value in this class of photography. The device consists of an ordinary reflecting-type camera, mounted on a carriage for ready portability and quick adjustment. The bellows is supplemented with a tube, permitting the use of lenses of upward of 30-in. extreme focus. This gives a larger image without loss in speed. A $\frac{1}{4}$ -in. image of a bird was obtained with a $7\frac{1}{2}$ -in. extreme-focus lens, as against a 2-in. image with one of 30-in. focus, from the same position. The lens is

set near the rear end of the tube, giving a deep hood for shading the sunlight. Lenses of an old type, known as "Long Toms," were used. They are inexpensive compared with newer types with iris diaphragms, and give good results even at $\frac{1}{1,000}$ exposures.—Arthur Farland, New Orleans, La.

Electric Fan an Aid to Heating Room

The electric fan is useful not only for cooling the air in summer, but also for distributing the warm air to advantage in the winter. An efficient way of warming a room fairly uniformly is to place an electric fan near a radiator, so that its breeze passes through the heating coils, or near another source of heat. The heat is circulated around the room, instead of being kept in a limited area.—Peter J. M. Clute, Schenectady, N. Y.

Cat-and-Bells Scarecrow

A scarecrow resembling a living animal is often more effective than other devices, and the cat-and-bells arrangement shown in the sketch was found especially so. The hide of a cat was stretched over a hollow frame and suspended by a cord from a large weather vane. Several bells were attached to the cord, and when the vane shifts in the wind, the movement of the hide and the rattling of the bells combine to frighten the birds.—F. H. Sweet, Waynesboro, Va.

A coating of five parts of coal tar, one part gasoline, and one part japan drier will make canvas nearly watertight.

A Small Hydraulic Turbine

By FRANK D. BELL

CONSIDERABLE power and speed can be developed under ordinary water-supply pressure by the turbine, or water motor, shown in the sketch and detailed in the working drawings. The parts are of simple construction, and the machine may be assembled or taken down easily. It is useful for either belt or direct connection to electrical generators, small machines, etc., the direct connection being preferable for a generator. The wheel is built up of sheet metal and provided with curved buckets set in the saw-tooth edge. The water is admitted through an opening in the lower part of the housing and passes out at the opposite end into a suitable drain pipe. The housing is made of two sections, the main casting and a cover plate. Bearings for the shaft are cast into the housing, which is reinforced on the back by ribs radiating from the center.

Wooden patterns are made for the housing, the main casting and the cover plate being cast separately. The pattern for the cover plate should provide for the bearing lug, as shown in the sectional detail, and for the angle forming a support at the bottom. Special attention should be given to allowance for proper draft in making the pattern for the main casting; that is, the edges

of the reinforcing ribs, and the sides of the shell should be tapered slightly to make removal from the sand convenient. The advice of a patternmaker

View of the Water Turbine with the Cover Plate
Removed, Showing Inlet and Drain

will be helpful to one inexperienced in this work, although many machine metalworkers are familiar with the process.

The finishing and machining of the parts and their assembling should be undertaken as follows: Clean the castings and file off rough parts. Smooth the cover plate and the shell to a close

Details of a Water Turbine That will Give Considerable Power and Speed for Driving a Generator or Small Machine

fit, and drill and tap the fastening holes for 8-32 machine screws. Drill $\frac{1}{4}$ -in. holes for the bearings, through the bearing arm and $\frac{1}{4}$ in. into the lug on the cover plate. Drill and tap the two grease-cup holes for $\frac{1}{8}$ -in. pipe thread. Drill the nozzle hole $\frac{1}{4}$ in., and drill and tap it for a $\frac{1}{2}$ -in. pipe nipple.

Lay out the wheel of $\frac{1}{16}$ -in. brass, making 24 notches in its edge. Fasten the wheel to the $\frac{1}{4}$ -in. shaft with a flanged coupling, fixing it with a set-screw. Bolt the flange to the wheel with 8-32 steel bolts. Make the buckets of $\frac{1}{32}$ -in. sheet brass, curved as detailed, and round off the edges. Solder

them into place, using plenty of solder and making certain that the curve is set properly. Place drops of solder on the flange nuts to secure them. Place the ends of the shaft on two knife-edges, and balance the wheel by adding drops of solder to the lighter side. This is very important, as undue vibration from lack of balance will wear the bearings quickly.

Assemble the machine, using shellac between the cover plate and shell. Make connection to the water supply with a $\frac{1}{2}$ -in. pipe. Bolt the machine down, and do not let it run at full speed without load.

Automatic Lock Box for Milk Bottles

A mousetrap spring, provided with a suitable catch, was fitted into a box for milk bottles, and served to protect the milk

bottle against theft by prowlers. The box was made large enough to hold several bottles, the empty ones in one portion and the filled bottles in another. The bottle is dropped through an opening in the locked end of the box and the spring forces up the catch. While this device may be tampered with, it guards

effectively against the theft of bottles of milk, since most of those stolen are taken because they are easily accessible.—L. F. Head, Seattle, Wash.

¶The oxyacetylene flame may be used in cutting or welding steel cables, but such welds will not sustain the original safe load of the cable.

Uses for an Old Toothbrush

A discarded toothbrush, properly cleaned so as not to be insanitary, may be used in one or possibly more of the following ways: to raise the nap of white buckskin shoes, after polishing them; in reaching corners with shoe polish, or in cleaning out eyelets and corners; cleaning typewriter keys with benzine; polishing small parts of metalwork.—Joseph A. Cunningham, Philadelphia, Pa.

A Locking Sheath for Hunter's Knife

Having made a hunting knife and desiring a suitable sheath for it, I devised that shown in the sketch, which has the special feature that the guard on the knife handle locks in slots cut through the sheath. Two pieces of leather were used, one for the back section and the other for the shorter front piece. The sewing at the edges of the two sections extends from the level of the slots around the lower end of the sheath. Two slots were cut vertically through the upper portion of the sheath, which is fastened to the belt of the wearer, as indicated.—George H. Flint, Harrison, Me.

Discarded Buggy Springs for Diving Board

Old leaf springs obtained from a buggy were used to give the necessary spring to a diving board. One of the springs was set at each side of the board about $2\frac{1}{2}$ ft. from the fixed end, and they were joined by a cross support of 2 by 4-in. wood, on which the spring board rested. Straps to check the strain on the springs from the rebound were provided.

Water Wheel Turns Spit over Campfire

When a camp fire is placed near a stream, water power may be utilized to turn the spit in roasting meat over the fire. The rod, on which the roast is suspended, should be extended, and supported at one end, over the water. A small paddle wheel may then be rigged up easily on the rod.

A Detachable Chair Arm

The children in the home as well as others can make good use of a chair arm which may be attached quickly to an ordinary chair. The wide arm is clamped to the back of the chair by means of a strip of metal fitted with a thumbscrew, and the upright is fixed to the arm by a hinge, making it con-

This Folding and Detachable Chair Arm Is Useful in the Home

venient to store the device. The lower end of the upright is fitted with a metal angle which fits on the corner of the chair.—J. F. Long, Springfield, Mo.

Comic Chest Expander for Play or Stage Use

A device used in an amateur vaudeville sketch with good effect, and

The Performer's Chest "Swells with Pride" When He Draws on the String by Shifting His Position

which is interesting for play purposes, was made of a $\frac{1}{32}$ by 9 by 14-in. piece of sheet spring brass, rigged as shown. In the center, near the upper edge, a small pulley was soldered, and at the center of the bottom edge a small hole was drilled. In it was fastened one end of a 4-ft. string which ran up through the pulley. The other end was fastened to a strap to fit around the leg just above the knee. At the two upper corners of the brass sheet two slots were cut to accommodate similar straps, as fastenings. When the wearer stands in a normal position the chest is as usual, but by straightening the body and slightly moving the strapped leg back, the brass sheet is bowed outward, giving the appearance indicated.—Arthur L. Kaser, South Bend, Ind.

□ Square cardboard disks fastened to the ends of a spool with thumb tacks will prevent it from rolling.

Cane Made of Tubing Contains Cigars

As a novelty in canes, a steel tube was provided with a suitable handle and used as a container for cigars and matches. The tube was fitted with a metal cap at its junction with the handle and the cigars are inserted or removed at this point. The end

of the handle was bored out and also provided with a cover, as a match safe. The tube was enameled and varnished to resemble wood.—James E. Noble, Toronto, Canada.

**Key Ring Used as a Cover Fastener**

The usual box-cover fastener in the form of a staple and hasp can be fastened quite securely, and much better than with the use of a wood pin, by applying a key ring to the staple. This is to take the place temporarily in case the lock is lost or discarded.—James M. Kane, Doylestown, Pa.

**Golf Tee Made of a Shotgun Shell**

Instead of making golf tees in the usual manner I used the brass end of a shotgun shell, weighted with a small iron ball attached to a string. The device was made as an experiment and proved so useful and convenient to carry that I continued to use it.—Edward Beasley, Texarkana, Ark.

**Patching Canvas Bottom of a Canoe**

A patch of silk, properly applied, makes a good repair for a hole worn through the canvas bottom of a canoe. Loosen the canvas for about 2 in. around the hole and apply thick shellac. Insert a piece of silk in the hole to lap under the edges of the canvas. Permit the shellac to dry slightly and smooth down the patch. Protect the joint further with white lead, smoothing over the patch and painting it when dry.

Handy Tray for Pencils and Penholders

A piece of light cardboard, or sheet metal, may be folded into a neat and useful holder for pens, pencils, etc., on the desk or drafting table. In the latter case a piece of stiff drawing paper, folded into V-grooves and tacked to the board, is convenient. For use on a finished surface the folded piece should be pasted on cardboard or otherwise fastened down.—William Robert, Springfield, Mass.

**Removing Sag from Couch Spring**

A couch spring of the type shown in the sketch sagged considerably, making it ineffective. The sag was taken up by bending the sections of wire with a monkey wrench, so that the entire spring was stiffened almost as satisfactorily as when new. Care must be taken that the wires are bent uniformly so that the strain is evenly distributed.

☛An eggshell may be balanced on the edge of a knife if the egg is "blown," and then partly filled with sand.

An Effective Combination Lock Easily Made

By E. F. STRONG

THE combination lock described has been used for years on lockers and letter boxes in a large public building. The details of a lock with three disks are given, and in Fig. 4 the use of two disks is suggested. The lock is made as follows: From a piece of $\frac{3}{16}$ or $\frac{1}{4}$ -in. hard wood, saw out three disks, A, Fig. 1, from 1 to 4 in. in diameter, according to the size of lock desired. For one with 2-in. disks, as shown, cut slots, B, $\frac{1}{2}$ in. wide and deep, in the edge of the disks. For axles use $\frac{3}{8}$ by 2-in. hardwood dowels, C, with a six-penny headless wire nail in one end, leaving about $\frac{1}{4}$ in. of it exposed.

The case of the lock is shown in Fig. 1. It is made large enough to mount the disks, as shown. Around the edges of the inside surface of the lid fasten strips a trifle thicker than the disks. Place the disks in the positions shown, drilling small holes in the baseboard for the nail axles. The bolts, D, and the piece, E, are made of hard wood, fastened with a lap joint. On each side of the bar, D, fasten cleats, F, to hold it in position. The handle, H, moves in a slot in the lid, and is fixed to the bar, E.

The door, or lid, on which the lock is to be used, is provided with openings, J, as shown in Fig. 3. The axles C, project through openings, as bearings. When the windows J, through which the combinations are read, are made, place the ends of the bolts in the slots of the disks and screw the lock in position. Mark on each disk the point exactly in the center of the window, enabling one to work the combination temporarily. To lock the device, push the handle to the left and turn the axles. To unlock it, turn the axles until the pencil marks appear in the middle of the windows, and throw the bolts.

Next make paper dials, K, of a diameter as shown in Fig. 2. Divide the circumference into from 50 to 100

equal parts, according to the size of the dial, and draw radii, as shown.

This Wooden Combination Lock Gives Good Service and is Easily Made

Number at least every fifth point. To the face of each disk, A, with small thumb tacks, fasten one of the dials, placing the combination numbers selected exactly over the pencil marks made in setting the temporary combination. Verify the combination before locking it. Unless the slots in the disks are a little wider than the ends of the bolts, the combination must be very closely adjusted. An aid in setting the combination is a line on the glass or a point of black paper, as shown in Fig. 2. The combination may be changed by setting the dials in new positions. The large number of combinations possible makes it very difficult to obtain the combination. For most purposes, two disks are sufficient in a lock of this kind.

CA convenient method of supporting a garden-hose nozzle is to tie a loose knot in the end of the hose, arranging the nozzle to spray as desired.

A Simple Metal Bird Basin

A bird basin can be made an attractive feature of a home garden, and that

shown in the illustration was made easily of a metal basin and a section of iron pipe. The pipe was sunk in the ground to a depth of 30 in. and loose rock placed around the end of it. A shallow pan, hammered out of a flat piece of sheet metal and provided with a cork stopper, was fixed to the upper end of the pipe. Holes were made in the edge of the pan and strings to support morning-

glories were attached from them to a hoop, set in the ground around the pipe. When it is desired to change the water in the pan it is drained off by releasing the cork.—Mrs. F. D. Reynolds, Stevens Point, Wis.

Catch-All Screen inside Hot-Air Register

In order to recover small articles dropped through the floor-register

grating of a hot-air heating system without the necessity of removing a section of the pipe, mesh gratings like that shown were fitted into place. Number six gauge wire mesh was used in pieces just large enough to fit into the metal box below the register. Access to the screen may be had by removing the grating.—F. M. Ball, St. Louis, Mo.

Practical Uses for Old Button Clasps

Leather and metal-button clasps from suspenders are useful in repairing heavy gloves, large leather cases, and other articles on which the clasps have been lost or worn out. They may be sewed or riveted into place. Attached to straps, they are useful means of making a fastening, and may be applied to leggings, and other parts of outing clothes.

Bark-Covered Porch Light and Plant Shelf

A combination flowerpot holder and reading lamp was made from two

pieces of wood, bark, and a lamp socket, and proved to be a good shaded reading light. With a plant in the flowerpot, the fixture was made quite attractive by day. Maple bark, well dried out, was used. A piece of board, $\frac{3}{4}$ in. thick, was cut to fit the curve of the bark, and fastened to it.

The former was then nailed to another board, $\frac{1}{2}$ by 5 by 14 in., which formed the support for the fixture. A lamp socket was attached and a suitable current source provided.

Removable Headrest for Chair

A convenient attachment for the back of a chair is an extension padded to form a comfortable headrest. This may be made by fixing a padded piece of wood, 6 in. wide and 20 in. long, to the chair back by means of suitable wooden braces, notched to fit the top of the chair.

Rigging Economizes Space in Closet

It was necessary to store a considerable quantity of clothing in a small clothes closet, and the rigging detailed in the illustration was devised, and provided unusual accommodations. Wooden rods, 1½ in. in diameter, were set across the closet at each side of the door and supported on notched blocks, as shown in the detail at the left. The clothes used frequently were supported on these rods by means of hangers. For clothes out of season, or used only occasionally, a special rigging was arranged in the space above the door. A 1½-in. rod was fitted between the walls to slide in a groove at its ends. Strips nailed to the wall formed the groove. Cords, attached to the rod, as shown, and carried to the ceiling, where pulleys were fixed, made it convenient to raise or lower the rod. A

This Simple Rigging Gave Accommodation for a Large Quantity of Clothing in a Small Closet

sheet was spread over the clothes to protect them.—A. K. Hay, Ottawa, Canada.

Scoop Made of Box End

A scoop that is serviceable for handling various kinds of lighter bulk material may be made by cutting the end from a cardboard box of suitable size and trimming it into shape. A handle may be provided by making a loop of cloth, or flexible cardboard, and fastening it with a paper fastener.

Mechanical Toy Pigeon Made of Wood

When the head of the mechanical pigeon is lowered the tail rises, and

Draw on the Wire and the Head and Tail Bob Up and Down

the reverse. It is constructed as follows: Make paper patterns for the parts, which consist of two body pieces, a head, a tail, and the foot piece. The shape of the parts is shown in the sketch, the front body piece being removed to show the connections of the rubber and wire controlling the movements. The view above shows the fastening of the parts with nails. The main sizes of the parts, which are made of ⅛ to ¼-in. soft wood, are: head, 1¾ by 3½ in.; body, 2 by 5¼ in.; tail, 1¼ by 3¼ in.; foot piece, 1¾ by 1½ in. Mark the shapes on the wood, cut them out, and mount them, with a rubber band connecting the head and tail, as shown. Nail the foot piece between the body pieces, and pivot the head and tail on nails. Connect the head with a wire, having a loop on one end. Make the holder, and cut a slot into it for the draw wire, operated with the finger.—C. C. Wagner, Los Angeles, Calif.

Sportsman's Cabinet for Guns, Equipment, and Books

The books, magazines, guns, fishing tackle, camera, etc., of the out-of-door

man are often kept or laid aside in various places. To provide a good place for such equipment, I made the case shown. What apparently is a neat bookcase when closed, the top shelf used as a magazine rack, accommodates numerous other articles. After the "bookcase" has been examined superficially I open the door, swing the shelves out, and display back of them my guns, hunting togs and outfit. Two small drawers, covered by the upper rail of the door when closed, hold various small articles; and a blind drawer under the door holds shoes and the larger articles. I con-

structed this combination cabinet as follows: The lumber used was $\frac{7}{8}$ -in. chestnut. The dimensions of the cabinet are 60 by 30 by 14 in. For the back of the bookshelf and cabinet I used matched ceiling. The door casings are 4 in. wide; the sidepieces of the door are 3 in. wide, the top, 4 in., and bottom piece, 6 in. wide. This cabinet cost me less than \$3 and does the service of a gun cabinet valued at \$30.—F. E. Brimmer, Dalton, N. Y.

A Photographic-Negative Filing System

In order to preserve photographic negatives and to make them easily available, the following homemade system was devised: The negatives are kept in envelopes having a print from the negative therein mounted on the face. A trial, or an inferior, print is used, and shows what negative it contains. Extra prints and enlargements are kept in the same envelope for each negative. On the face, or back, of the envelope is written data, such as name or title of subject, place and date taken, stop and shutter speed used, most suitable printing paper, developer, etc. This data may be kept in the negative envelope on a sheet of paper. This leaves the photograph album free from data that is of no interest to persons viewing the pictures. The envelopes are kept in their original boxes, classified as "Animals," "Birds," "Live Stock," "Landscapes," "My 1914 Vacation Trip," and so forth.

Knee-Rest Holder for Milking Pail

Becoming tired of holding the milk pail between my knees while milking,

I made a contrivance of strap iron to overcome this. It is arranged so that the milk pail will just fit inside, the curved straps supporting the weight of the pail on the knees. The holder may be made of wood, with the possible exception of the

curved arms, which should be made of pieces of iron, $\frac{1}{8}$ in. thick and about 2 in. wide. The circular frame can be made adjustable to various pails by bolts set in holes in the bands.—J. C. Whitescarver, Miami, Okla.

Tool Sockets in Edge of Drawing Board

Drawing tools, pencils, etc., were kept out of the way on a drawing board by inserting them in pockets drilled in the upper edge of the drawing board. A small brass plate, pivoted on the center, was used to cover each set of two pockets, and the latter were numbered on the upper surface of the board.—Elmer O. Tetzlaff, De Pere, Wis.

Cart for Carrying Huge Drum in Parade

The inalienable right of the small boy to carry the drum in a parade was disregarded when the cart shown in the sketch was made for a large drum. Two rubber-tired wheels were mounted on an axle bent to fit the drum, and curved handles, forming a supporting frame, were fixed to it. The frame was made of hickory, steamed

This Rubber-Tired Cart was Built Specially for a Large Drum Used in Parades

and bent into shape, and the drum was arranged to be quickly dismounted.—W. C. K., Mason City, Iowa.

A Homemade Inverted Electric-Light Fixture

An attractive and serviceable inverted-light fixture for a den and study, was made at an outlay of about 30 cents, the details of construction being shown in the illustration. The light is

distributed thoroughly, and with a 40-watt lamp is ideal for work at a desk. The lower portion A is a tin wash-basin, costing 10 cents, and the part

A Ten-Cent Wash-basin was Used as a Reflector for This Light Fixture

C is a cup-cake pan, costing 5 cents. The rim B is made of $\frac{5}{8}$ -in. wood, 13 in. in diameter, and the disk E, 10 in. wide, is the round block cut from the center of the rim B. The uprights D are made of $\frac{3}{8}$ -in. dowel rods and of a length suitable to the height of the room. They are glued and toenailed to the rim and disk. F is a cup-cake pan, and G is a drawer knob, fastened to the pan F. These parts can be omitted if desired. They are fastened to the top with wood screws.

The light socket is supported in a metal strap, H, having a rounded offset to match a bolted clamping strip. The inside of the basin, being tinned, acts as an excellent reflector. All parts except the inside of the pan are enameled white. The fixture is fastened to the ceiling with screws through the disk.—A. F. Krueger, Champaign, Ill.

¶The gummed portions of unsealed envelopes are often useful when a gummed strip is desired.

Wheelbarrow for Large Cans

Large cans for milk are awkward to handle and transport in the dairy or barn, and the cart shown in the sketch

Milk Cans were Handled Easily by Means of This Homemade Cart

was made from an old wheelbarrow and sections of pipe, to make this work easy. The pipes were bent to the shape shown and strongly braced with iron rods. A board bottom was provided, and the barrow wheel was

mounted between the forked ends of the frame. The cart may be used for numerous other purposes, and is especially convenient in that the load need only be lifted slightly.—Monroe Woolley, San Francisco, Calif.

Plain Butts Used as Double-Swing Hinge

By placing two ordinary plain butt hinges so that two of their wings overlap completely, they may be made to serve as a double-swing hinge. If the holes do not correspond in the adjoining wings, drill new ones, disposing them to give the best hold in the wood. Allowance must be made in applying the hinge, for the double thickness of the center portion.

CA rubber finger tip is convenient in counting sheets in that the paper is not soiled, since moistening of the finger is unnecessary.

Portable Skylight for Home Portraiture

By W. W. IRVINE

Photographers who wish to construct a part of their equipment may be interested in a portable skylight, which I made and use with thorough satisfaction, for home portraiture. Covered with imitation leather, it is quite presentable in carrying it about. Figure 9 shows the case closed, with stand, flash lamp, box of flash powder, and a white-cloth reflector inside. The apparatus set up for work is shown in Fig. 5, and the details of construction in the other sketches.

First make the frames for the top and bottom of the case, A, of $\frac{3}{8}$ by $2\frac{1}{2}$ -in. wood, and B, of $\frac{3}{8}$ by $1\frac{1}{4}$ -in. stock, lengths and construction as shown in Fig. 3. Cut from extra-heavy mount board, two 21 by 28-in. pieces, C, and tack one to one side of each of the frames. Cut a similar piece, E, 15 by $26\frac{1}{2}$ in., and hinge it with strong cloth, or thin leather, to the inner side of the thicker frame, to

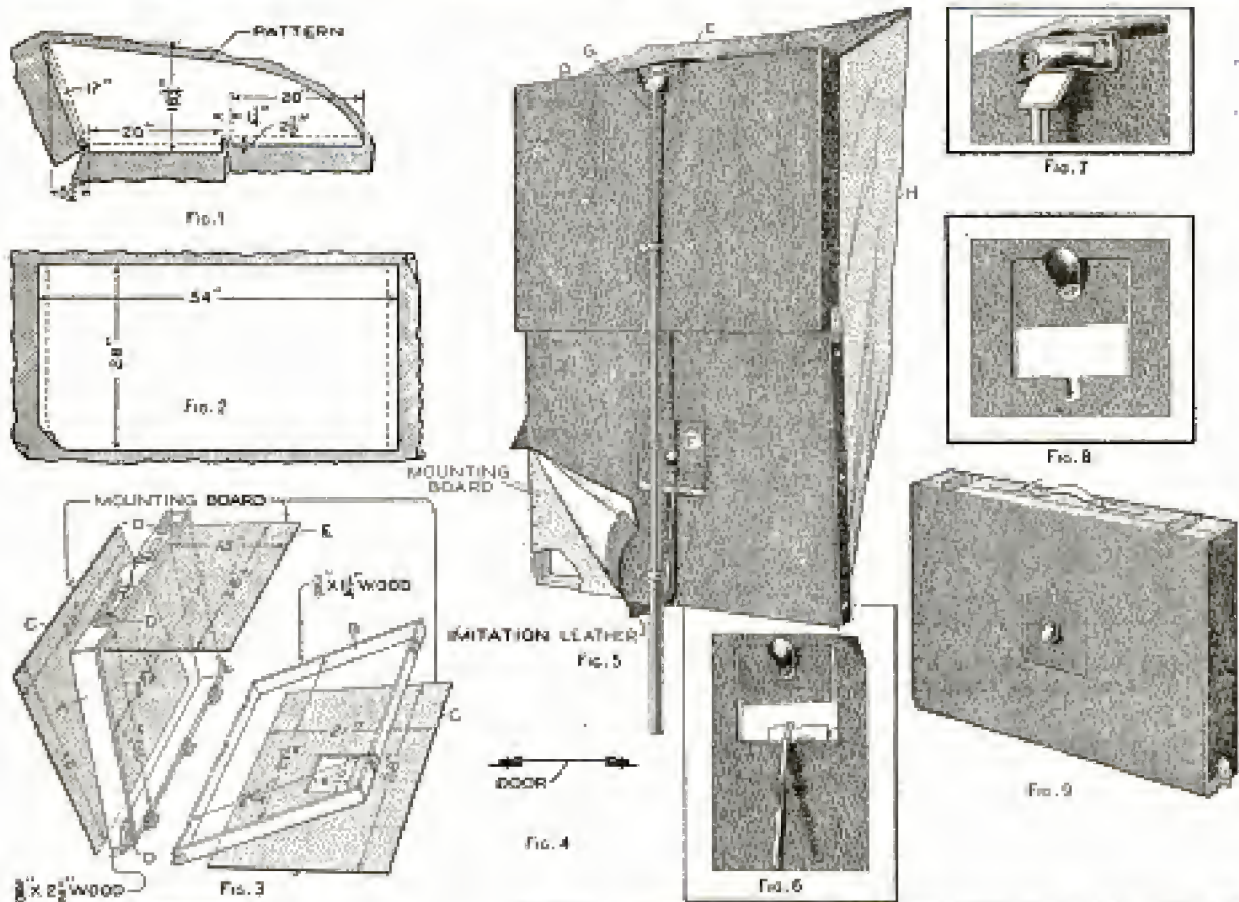

form the roof E, Fig. 5. Hinge the two frames with three butt hinges.

The frame is then ready for covering, and for this purpose imitation leather is economical and practical. Two yards of 36-in. material is needed. Use hot glue, first on the bottom half of the case, applying it smoothly, and press the fabric into place. Then cover the sides, the upper half, and the roof. The covering must be in one piece to prevent the smoke from escaping at the joints. Glue down the edges inside of the case, and set it aside for 24 hours to dry.

While waiting for the case to dry, the work on the bag can be done. Two yards of close-woven white muslin, or one yard of 60-in. sheeting, is required for the front. For the sides, close-woven black material should be used. Figures 1 and 2 show the dimensions, the white portions representing patterns, and the shaded portions mate-

material for hems and seams. The material is folded over the pattern, basted down, and hemmed at the dotted lines,

in Figs. 5 and 6. Mine was made for cartridges, but by attaching a pan of heavy tin, I use it for flash powder.

This Homemade Skylight was Made at a Cost of \$3, Gives Satisfactory Service, and Is Not Unsightly

1½ in. from the edge. Sew the front to the curved sides. Allowance for shrinkage, when the bag is washed and fireproofed, has been made in these sizes.

For fireproofing the bag, the following formula is good: water, 60 oz., ammonium phosphate, 4 oz., ammonium chloride, 8 oz. Soak the fabric half an hour, wring it out slightly, and hang it up to dry.

Cut a hole, 6 in. square, in the lower half of the case for the door F, Fig. 5. The door is of galvanized sheet iron, 7 in. square, covered on one side with imitation leather and provided with a leather handle. The door slides in guides of mount board, or metal, as shown in Fig. 4. Figure 8 shows the notch below the door to allow play for the spring of the flash lamp, in place

The leather socket, into which the top of the holder G, is slipped, is shown in detail in Fig. 7. Suitcase catches, D, lock the apparatus in open or closed position. The roof E, is supported by two folding desk slides.

To fasten the bag in place, slip a cheap yardstick, or strip, cut to the proper length, in each of the hems at the edges, and set them snugly inside and against the sides of the open case and under the edge of the roof. Fasten them with screws, as shown at the edges in Fig. 5. The bag is easily removed by withdrawing the screws and the strips, for washing and fireproofing it again. The front must hang away from the lamp before the charge is fired, or the bag may be burned. After firing the flash, the skylight is carried out and the smoke expelled.

Fuel Box in Seat Filled from Floor Trapdoor

A fuel box for the fireplace may be easily arranged so that it is unneces-

The Fuel is Placed in the Box by Passing It Up through the Trapdoors in the Floor

sary to carry the fuel through the living rooms, thus avoiding soiling floors and rugs. It may be installed, as shown, for a summer cottage, or even in the living room of a home. The fuel box is built under the seat of a comfortable settle, and the wood, coal, etc., are placed in the fuel compartment by passing it up through trapdoors in the floor at the center of the box. The fuel is piled at each side of the trapdoor behind a low partition, and the trapdoors are closed when not in use. The seat of the fuel box is divided at the middle and hinged to swing back. Suitable cushions should be provided for the seat.—M. P. Norton, Chicago.

Homemade Relay of Inexpensive Materials

A practical relay was made of odds and ends gathered in the workshop. The base is of wood, $\frac{3}{4}$ by 3 by 6 in. The magnets A are made of two wire nails driven into the base, the heads projecting $1\frac{1}{2}$ in. They are wound with six layers of fine insulated No. 25 gauge wire, as shown in the small

sketch. The ends of these magnet wires are carried to the two binding posts B and C, taken from dry-cell carbons.

The armature D is a piece of soft iron, $\frac{1}{2}$ by $2\frac{1}{2}$ in., screwed to the armature lever E, which is a $\frac{1}{2}$ by $4\frac{1}{2}$ -in. piece of wood. A piece of tin is tacked to the opposite end F, and a $\frac{1}{8}$ -in. hole is bored through the lever, $2\frac{1}{2}$ in. from the front end. Nail a wooden block, G, to the base, slotted to accommodate the lever, so that when the latter is pivoted in the slot, the armature will lie directly over the magnet heads. Fit a wooden stop, H, under the end of the lever, so that the armature is held $\frac{1}{8}$ in. above the magnets, by a brass spring, J, connected to the tin, F, and the binding post, K, with copper wire. Arrange the brass hook, L, so it comes in contact with F when the armature bears down upon the magnets. Connect this hook to the binding post, M. When current flows through the magnets, the armature is pulled down and the contact of the

Nails, a Screw Hook, and Similar Common Materials, were Used in Making This Relay

hook, L, with the tin, F, completes a secondary circuit.—L. R. Hardins, Harwich, Mass.

CA nutcracker may be used as a substitute for a pipe wrench or pliers, and its toothed handles grip round objects quite firmly.

Uses for Worn Talking-Machine Needles

Among the uses made of discarded steel talking-machine needles are the following: as glazier's tacks; as brads, where a headless nail or an inconspicuous one is desired; as pins for fastening papers together; and for the tacking in of the backs on picture frames.—William A. Martin, Jersey City, N. J.

Automatic Photo-Print Washing Device

A photographers' automatic print-washing device may readily be made with the aid of an alarm clock, and a spool to which a piece of thread is attached as shown. The spool is fixed to the alarm-clock winder. An upright support, having a nail driven into the top and bent over to form a hook, carries the thread, to which the print is attached by a small clip. The alarm-clock mechanism is then set, and when released draws the print from the dish, the bell warning the operator.—George H. Holden, Chesterfield, England.

Portable Sectional Poultry Fencing

Sectional poultry fencing has several advantages over stationary fencing: It can be easily moved, the poultry yard being made larger, smaller, or shifted; an area may be planted to a crop and gradually included in the yard, furnishing greens for the poultry. Also, the tenant who does not care to put down permanent equipment, will find sectional fencing desirable.

Sections are practical to about 18 ft. long, and should be 7 ft. high for the lighter breeds of poultry. If the fencing is to be used for grown stock only,

the fine-mesh wire below may be omitted, and 2-in. mesh used. Some sections should be fitted with gates, and the top batten should be set down

Poultry Fencing Made in Portable Sections Has Several Advantages over a Stationary Barrier

about 1 ft., so as not to afford footing for the poultry. The sections are lashed together with wire, and supported by an occasional post, or guyed to buildings or supports.

Suitcase Holder for Running Board of Automobile

Two metal strips, $\frac{3}{16}$ by $1\frac{1}{2}$ by 20 in., were used to make a strong and adjustable holder for suitcases carried on the running board of an automobile. One-inch slots were cut near the top of the strips, which were bent to form angles having an upright portion 12 in.

These Homemade Supports Are Adjustable to Suit-cases of Varying Widths

long. The angles are adjusted at the bolts, as shown, and the suitcase is held in place by straps.—Lucien G. Baer, Los Angeles, Calif.

TWO INEXPENSIVE PUBLIC BUILDINGS WORTH NOTICE

2789

Above is Shown the Schoolhouse and Below the Post Office at Estes Park, Colorado. These Buildings Are Worth Studying, for Neither of Them Cost the Village a Fortune and Both of Them Are Vastly More Attractive than Hundreds of Public Structures of Many Times Their Valuation

NOW and then one finds a small town blessed with public buildings that are a credit to the intelligence and taste of the community. That is, buildings whose cost is commensurate with the financial rating of the village, whose architecture is sufficiently divorced from monotony to be attractive, and whose capacity is adequate for present and near-future needs. Two structures of this sort, one a schoolhouse and the other a post office, are to be seen at Estes Park, a resort place in the Colorado mountains, 75 miles or so from Denver. Both of the buildings are constructed of native boulders and stucco, and while neither is the least original architecturally, the effect in each case is kind to the eyes. Conditions in Estes Park are different from those in most small towns. The year-around population, for instance, is not more than 400, while some 8,000 or 10,000 persons reside in the vicinity during the summer months. In winter the school is attended by about 50 pupils of various ages, but in summer it serves as a kindergarten for tourists' children. Likewise the post office handles a sack or two of mail winter days and 30 or more of them later on. The spacious porch affords a resting place in summer for persons waiting for mail to be sorted. This building was erected by the villagers, 46 men and women contributing the money and labor that entered into its construction.

IN accordance with the editorial policy of this magazine never to accept compensation in any form for what appears in our reading pages, and also to avoid all appearance of doing so, we are obliged to omit the name of the maker or the seller of any article described. This information, however, is kept on file and will be furnished free, by addressing Bureau of Information, Popular Mechanics Magazine, Chicago. [Editor.]

HOW I EARNED \$200,000 IN THREE YEARS

The amazing and inspiring story of a young man who jumped from failure to fortune; did not speculate; says no man need beg for success. —As Told by Himself.

SOME people say it takes money to make money—others complain that they never made money because they never had any luck. When one is up against the stern reality of making both ends meet, it is natural to feel that if they only had a little money, or a little luck, they wouldn't have to worry about their bread and butter, and rent, and clothes.

Three short years ago I too felt that way. I was \$5,000 "in the hole"—and earning \$30 a week. Figure out how long it would take me to pay what I owed! I had a wife and two children to support, and I used to worry myself sick about their future. What would become of her? What would become of them? Would we always have to skimp and scrape? Would we ever be able to pay what I owed?—to say nothing of saving something for the "rainy day."

Today—it seems like a dream—all my troubles are over. I am worth \$175,000—enough to keep me and my family in comfort for the rest of our lives. I own two automobiles. My children go to private schools. I have just purchased, for cash, a \$25,000 home. I go hunting, fishing, motoring, traveling, whenever I care to.

Let me say in all sincerity that I believe what I have done, you—*anyone*—can do. I am only an average man—not "brilliant"—have never gone to college—my education is limited. I know at least a hundred men who know more than I, who are better educated and better informed—yet not one of them has made as much money as I have and their earnings probably average less than \$50 weekly, while my income is over \$1,000 weekly. I mention this to show that earning capacity is not governed by the extent of a man's education—to encourage those who have not had the advantage of a comprehensive education.

What then, is the secret of my success? Let me tell you how it came about.

One day, about three years ago, something happened that woke me up to what was wrong with me. It was necessary for me to make a decision on a matter which was of no great consequence. I knew in my heart what was the right thing to do, but something held me back. I said one thing, then another; I decided one way, then another. I couldn't for the life of me make the decision I knew was right.

I lay awake most of that night thinking about the matter—not because it was of any great importance in itself, but because I was beginning to discover *what was wrong with me!* Along towards dawn I resolved to experiment. I decided to cultivate my will power, believing that if I did this I would not hesitate about making decisions—that when I had an idea I would have sufficient confidence in myself to "put it over"—that I would not be afraid of myself or of things or of others. I felt that if I could smash my ideas across I would soon make my presence felt. I knew that heretofore I had always begged for success—had always stood, hat in hand, depending on others to give me the things I desired. In short, I was controlled by the will of others. Henceforth, I determined to have a strong will of my own—to demand and command what I wanted.

With this new purpose in mind I applied myself to finding out something more about will power. I was sure that other men must have studied the subject, and the results of their experience would doubtless be of great value to me in understanding the workings of my own will. So, with a directness of purpose that I had scarcely known before, I began my search.

The results at first were discouraging. While a good deal had been written about

Please Mention Popular Mechanics

the memory and other faculties of the brain, I could find nothing that offered any help to me in acquiring the new power that I had hoped might be possible.

But a while later in my investigation I encountered the works of Prof. Frank Channing Haddock. To my amazement and delight I discovered that this eminent scientist, whose name ranks with James, Bergson, and Royce, had just completed the most thorough and constructive study of will power ever made. I was astonished to read his statement, "The will is just as susceptible of development as the muscles of the body"! My question was answered! Eagerly I read further—how Dr. Haddock had devoted twenty years to this study—how he had so completely mastered it that he was actually able to set down the very exercises by which anyone could develop the will, making it a bigger, stronger force each day, simply through an easy, progressive course of Training.

It is almost needless to say that I at once began to practice the exercises formulated by Dr. Haddock. And I need not recount the extraordinary results that I obtained almost from the first day. I have already indicated the success that my developed power of will has made for me.

But it may be thought that my case is exceptional. Let me again assure you that I am but an average man, with no super-developed powers, save that of my own will. And to further prove my contention let me say that since Prof. Haddock's lessons, rules, and exercises have been published in book form, I have come across hundreds of other cases where strengthened will power has brought success and fortune to people who were failures, has enabled thousands to overcome drink and other vices almost overnight—has helped overcome sickness and nervousness, has transformed unhappy, envious, discontented people into dominating personalities filled with the joy of living.

I have been authorized by the publishers to say that any reader who cares to examine this startling book may do so without sending any money in advance. In other words, if after a week's reading you do not feel that "Power of Will" is worth \$3, the sum asked, return it and you will owe nothing. When you receive your copy for examination I suggest that you first read the articles on; the law of great thinking; how to develop analytical power; how to guard against errors in thought; how to drive from the mind unwelcome thoughts; how to develop fearlessness; how to use the mind in sickness; how to acquire a dominating personality.

Some few doubters will scoff at the idea of will power being the fountainhead of wealth, position, and everything we are striving for, and some may say that no mere book can teach the development of the will. But the great mass of intelligent men and women will at least investigate for themselves by sending for the book at the publisher's risk. I am sure that any book that has done for me—and for thousands of others—what "Power of Will" has done, is well worth investigating. It is interesting to note that among the 150,000 owners who have read, used, and praised "Power of Will" are such prominent men as Judge Ben B. Lindsey; Supreme Court Justice Parker; Wu Ting Fang, ex-U. S. Chinese Ambassador; Lieut.-Gov. McKelvie of Nebraska; Assistant Postmaster-General Britt; General Manager Christeson, of Wells-Fargo Express Co.; E. St. Elmo Lewis; Governor Arthur Capper of Kansas, and thousands of others.

As a first step in will training, I would suggest immediate action in this matter before you. It is not even necessary to write a letter. Use the blank form below, if you prefer, addressing it to the Pelton Publishing Company, 13-H Wilcox Block, Meriden, Conn., and the book will come by return mail. This one act may mean the turning point of your life, as it has meant to me and to so many others.

PELTON PUBLISHING COMPANY

13-H Wilcox Block, Meriden, Conn.

I will examine a copy of "Power of Will" at your risk. I agree to remit \$3 or return the book in 5 days.

Why the Average American Dies at Forty-three

*"He Feeds His Stomach with Tasty Junk"
says E. E. Rittenhouse of Equitable Life*

By R. W. LOCKWOOD

President of the Corrective Eating Society

THE presidents of life insurance companies with perhaps twenty billion dollars insurance on the lives of Americans, recently met in convention at the Hotel Astor in New York, and in their discussion brought out some of the reasons why the average American dies at about forty-three years of age.

According to the press reports, Mr. E. E. Rittenhouse, Commissioner of Public Service and Conservation of the Equitable Life Assurance Society, said: "The average American would not think of mixing bricks or scrap iron or gravel with the fuel for his furnace, yet he feeds his stomach with all sorts of tasty junk, much of which cannot be fully digested . . . he is seriously over-straining his heart, arteries, kidneys, nerves and digestion, as the rapidly increasing death rate shows."

This statement from such an authoritative source—from a man who makes it his business to study both vital statistics and the causes behind them—sounds a warning which should be heeded by every man and woman.

Indeed, there is no longer a doubt among intelligent people that many of the foods and combinations of foods which we are most accustomed to eat are the direct cause of much sickness.

Yet how few of us heed the early warnings of illness, such as acid-stomach, fermentation, or constipation. I venture to say that nine out of ten persons suffer to a greater or lesser extent from one or more of these three symptoms, which are in many cases the forerunners of more serious sickness.

Stomach medicines and laxatives are plentiful, but of what avail are they? The only thing that a stomach medicine can do is to

temporarily neutralize the extra amount of acid in the stomach, because it is *stronger* than the acid. And this injures the stomach, usually bringing the acid back worse than it was before. A laxative is just as bad, if not a little worse; not only is its effect temporary, but all laxatives are habit-forming and are required in ever-increasing doses.

If neglected, a simple case of acid-stomach may lead in a short time to fermentation, with gas, and constipation. The fermenting food forms poisons which are absorbed into the blood, causing auto-intoxication, nervousness, mental depression, and a host of other unpleasant symptoms.

Is it any wonder that the officers of large insurance companies sound a warning against the evils of wrong eating?

* * * * *

But just as wrong eating is the cause of 90 per cent. of common illnesses, so will correct eating create and maintain both bodily vigor and mental energy. And by right eating I do not mean freak foods—I mean just good everyday foods properly combined. In fact, to eat correctly, or follow a course of Corrective Eating it is not at all necessary to upset your table.

Eugene Christian, the well-known food specialist, has proved the efficacy of Corrective Eating in thousands of cases. Entirely without the use of drugs or medicines, men and women suffering from almost every conceivable non-organic ailment have been returned to health and vigor by following his simple directions in regard to their eating.

* * * * *

In a recent talk with Eugene Christian he told me of several interesting cases which had

Please Mention Popular Mechanics

recently come under his care. One was that of a woman prominent in Woman Suffrage work in New York City. She had come to him with stomach and intestinal fermentation and gas, auto-intoxication, mental depression and anemia, vertigo, and threatened heart failure. She was very much overweight when she commenced, but reduced her weight thirty-seven pounds during the treatment. He showed me a letter she had written him afterward, in which she said:

"I am sure you will be gratified to hear that I continue to improve—it seems sometimes that I must have been made over, and it is difficult to remember that less than eight months ago I was a feeble old woman depending upon daily doses of strychnia for what little strength I had. When I came under your treatment, I weighed one hundred and ninety-seven pounds, was hardly able to walk, and was subject to most serious heart attacks upon the slightest exertion. And now I am so well, so strong, that my family and friends maintain that it is a miracle which has restored me to strength and vigor of life—certainly in my case the cure is most remarkable because of my sixty-seven years."

Another was a well-known minister who had been out of his pulpit for twenty-two months, unable to preach or conduct the simplest service. He was about twenty-five pounds under-weight, anemic, nervous, had superacidity, and could not assimilate his food; and his heart action was very irregular. He had gradually declined for two years although treated by one of New York's leading physicians. Three months after he placed himself under Eugene Christian's care, he preached the first sermon he had been able to preach in nearly two years. This was over three years ago.

He has gained about twenty-five pounds in weight and since has not missed a day from his arduous clerical work. He has steadily gained in strength and vitality and is to-day healthy and athletic.

* * * * *

But Eugene Christian's own case is perhaps the most interesting of all, for it shows how he discovered the beginnings of the methods which he has since pursued so successfully with others—methods of selecting and proportioning one's meals so as to overcome conditions brought about by wrong eating.

Merely clip out and mail the following form instead of writing a letter, as this is a copy of the official blank adopted by the society and will be honored at once.

CORRECTIVE EATING SOCIETY, Inc., Dept. 54, 450 Fourth Ave., NEW YORK CITY

You may mail me the "Lessons in Corrective Eating" for examination. Five days after I receive them, I will either send you \$3 (full payment) or return them to you.

Name..... Local Address.....

City..... State.....

Please Mention Popular Mechanics

Twenty years ago he was at death's door; for several years previous he had suffered all the agonies of acute stomach and intestinal troubles, until his doctors—among them some of the most noted specialists in the country—gave him up to die. As a last resort, he commenced to study the food question himself. As a result of what he learned, he succeeded in literally *eating his way back to health* without drugs or medicines of any kind and in a remarkably short space of time.

Eugene Christian is to-day nearly sixty years old—or shall I say young? For he has more vitality, more ginger, more physical endurance than most youngsters in their teens. During the past fifteen years he has not had even so much as a cold.

* * * * *

Since the remarkable success of Eugene Christian has become known, people have sought his advice in such rapidly increasing numbers that he has found it necessary to put his methods in printed form. He has written a series of 24 Little Lessons which tell you exactly what to eat for health, strength and efficiency.

These lessons contain actual menus for breakfast, luncheon, and dinner, including corrective menus for almost every condition of health and sickness from infancy to old age, for all occupations, climates, and seasons.

With these lessons at hand it is just as though you were in personal contact with this great food specialist, because every point is so thoroughly covered and so clearly explained that you can scarcely think of a question which isn't answered. You can start eating the very things that will help to produce the increased physical and mental energy which you are seeking the day you receive the lessons. And you are quite likely to feel some results after your very first balanced meal.

If you would like to examine these "24 Little Lessons in Corrective Eating," simply write the Corrective Eating Society, Inc., Dept. 54, 450 Fourth Avenue, New York City. It is not necessary to enclose any money with your request. Merely ask to have the lessons mailed for five days' trial with the understanding that you will either send the small price asked, \$3, or return the books.

ALADDIN Bungalow Home Complete \$817

Quick Shipment

6 Rooms—Large Porch—Large Closets

Contains Large Living Room, Large Dining Room, Two Good Bedrooms with Large Closets, Spacious Kitchen, Bathroom

Build This Year at Last Year's Costs

Don't delay your building plans. Decide to start building now. Building prices are going up. Labor prices will advance. The *Aladdin Ready-Cut System* enables you to build your new home, garage, barn or farm building at a substantial saving in cost. Thousands of Aladdin customers—some near you—will tell you how much they have saved building the Aladdin way. The big book "Aladdin Homes" will show you plans and pictures of over 100 homes. It will also demonstrate the saving you can make by building *NOW*. Send stamps for your copy today.

Aladdin Houses Save Waste of Lumber

Ordinary building methods waste on an average of 18% of the lumber you pay for. Think of it! \$18 out of every \$100 goes to the waste pile and is burned up for kindling wood. Of course, the lumber that is wasted costs just as much as the lumber that is used. Are you willing to pay \$18 on every \$100 worth of lumber for waste? This is an important item to consider, especially when lumber prices are advancing. The Aladdin system saves you this unnecessary expense—puts the \$18 from every \$100 into your pocket. Aladdin Ready-Cut Houses are cut-to-fit in our mills. You pay for the material used in your house—no more.

Aladdin Customers Save \$200 to \$800

Each day in the year we receive letters from many Aladdin owners in every part of the United States saying: "Just finished my home. Find I saved \$200." "You have saved us enough to install a furnace and complete plumbing system." "We saved \$500." "SAVED" is the answer in one word. From the builder of the small three room home to the owners of homes averaging \$5000 to \$8000 it is the same story. "Aladdin saved us money."

Bungalows, Dwellings, Summer Cottages

Buy direct from the forest—from Aladdin—and make four savings. You make a substantial saving on the lumber, on the millwork, on the hardware and on the labor. The big Aladdin catalog tells all the facts you want to know, gives photographs, floor plans, prices and descriptions of a hundred modern homes, bungalows, dwellings, summer cottages and garages. Send for it today.

Price Includes All Material

Aladdin Houses are complete. You get material as follows: Sills, Joists, Studding, Building Paper, Sub-Floor, Rattens, Roof Sheathing, Siding, Outside Finish, Flooring, Lath and Plaster or Plaster Board, Inside Finish, Doors, Casings, Base Board, Windows, Sash, Glass, Nails of all sizes, Locks, Hinges, Tin Flashing, Paints, Oil, Varnishes, Stains, Potty and Shallow, with complete drawings, blueprints and instructions for erection—The Complete House. Send for Catalog No. 100. Enclosed find stamps. Send me your Catalog No. 100.

The New Oliver Nine

How We Will Save American Business Millions of Dollars

The New Plans of The Oliver Typewriter Company

This is a proposal to sell new Oliver Typewriters for half what they used to cost. New machines of our latest model—Oliver Nine. That without altering the value one penny. All by ending a monstrous selling cost. If that interests you, we claim a few minutes' attention.

THE Oliver Typewriter Company is at the height of its success. With its huge financial resources it has determined to place the typewriter industry on a different basis. This, you admit, is in harmony with the economic trend of the times.

This is the time when American industry must prepare for the end of the war. New economic adjustments are inevitable.

Henceforth there will be no expensive sales force of 15,000 salesmen and agents. No high office rents in 50 cities. No idle stocks.

PRICES CUT IN TWO

By eliminating these terrific and mounting expenses, we will reduce the price of the Oliver Nine from the standard level of \$100 to \$49.

This means that you will save \$51 per machine. This plan, were it to become universal, would save all who buy typewriters over \$100,000,000 a year.

This is not philanthropy on our part. While our plan saves you much, it also saves for us.

On each Oliver typewriter for which the user paid \$100, more than half has been spent for salaries, traveling expenses, and commissions to an army of salesmen and agents.

Over 600,000 Sold

Thousands of dollars have been spent in maintaining expensive branch houses and show rooms in many cities.

Our new plan now saves all this useless waste and brings the typewriter business down to a rock-bottom basis.

Thousands will welcome this announcement. It heralds a standard typewriter at a price never before possible.

Now note this fact carefully. We offer the very same Oliver Nine—the latest model—brand new—full standard equipment—for \$49, the exact one which was \$100 until this advertisement. Every Oliver Typewriter is fully guaranteed.

You may have one of these Oliver Nines for inspection without paying a cent. You decide in the privacy of your office or your home. There will be no forceful salesman—working for a commission—to influence you.

WHO CAN RESIST?

Now we ask you, is the old sales plan necessary? Must we turn over to salesmen more than half of what you pay? Or would you rather have us save \$51 and give the whole saving to you?

Read all of the details on the opposite page. Then order an Oliver Nine for free trial or send for our startling book, entitled "The High Cost of Typewriters—The Reason and The Remedy." Mail the coupon.

Oliver Features—Many Exclusive

One-third lighter touch because type bars drop downward. Speed 50 per cent faster than human hands; every machine is tested at 800 strokes per minute. Permanent alignment insured by arch-shaped type bars. Built for hardest usage. Famed for dependability. Printtype—if you prefer—the clear, readable type that writes like print. Interchangeable carriages—make several machines in one. The clearness, readability and number of Oliver carbons is beyond comparison. Double color ribbon. In-built tabulator. Ruler—horizontal and vertical. Simplified construction—2000 fewer parts. Bronze bearings. No hair springs nor flimsy wires. Built of fine tool steel.

Was \$100—Now \$49

A \$2,000,000 Guarantee That This \$49 Typewriter Was \$100

The Sales Policy Alone Is Changed—Not the Machine

The Oliver Nine—the latest and best model—will be sent direct from the factory to you upon approval. Five days' free trial. No money down—no C. O. D. No salesmen to influence you. Be your own salesman and save \$51. Over a year to pay. Mail the coupon now.

THIS Oliver Nine is a twenty-year development. It is the finest, the costliest, the most successful model that we have ever built.

For \$49, whether you buy *one* Oliver Nine or *one hundred*, you receive the exact machine which was \$100, fully guaranteed.

It is the same commercial machine purchased by the United States Steel Corporation, the Standard Oil Company, the National City Bank of New York, Montgomery Ward & Co., the National Biscuit Company, the Pennsylvania Railroad and other leading businesses. Over 600,000 are in *daily* use.

SIMPLIFIED SELLING

Our new plan is extremely simple.

It makes it possible for the consumer to deal direct with the producer.

You may order from this advertisement by using the coupon below.

We don't ask a penny down on deposit—no C. O. D.

When the typewriter arrives, put it to every test—use it as you would your own. If you decide to keep it, you have more than a year to pay for it. Our terms are \$3.00 per month, the equivalent of 10 cents a day.

To the Big User

This announcement is of particular value to you. Big users will save hundreds and thousands of dollars. An absolutely new Model 9 Oliver Typewriter, fully guaranteed, at a list price of \$49, presents a typewriter opportunity unparalleled in the history of the industry. To save 50 per cent is certainly interesting to any business man, especially when the value remains unaltered. You know the Oliver. This present Model 9 is operated by any stenographer or typist, including touch operators.

We suggest to purchasing agents or buyers whose concerns use typewriters in quantity to get in touch with us immediately. Write today for further particulars relating to large users.

Or if you wish additional information, write us or send us your address on this coupon for our proposition in detail. We immediately mail you our de luxe catalog and all information which you would otherwise obtain from a typewriter salesman.

WHY PAY \$100?

Why now pay the extra tax of \$51 when you may obtain a brand new Oliver Nine—a world favorite—for \$49?

Cut out the frills and order direct from this advertisement.

Or send for our remarkable book entitled, "The High Cost of Typewriters—The Reason and The Remedy." You will not be placed under the slightest obligation.

The Oliver Typewriter Company

For the Home Mechanic

To make close joints in moldings, railings, and such ornamental woodwork, an accurate Mitre Box is an absolute necessity. The Goodell-Pratt All-Steel Mitre Box is fully up to the standard of the tools on which the maker's reputation for high quality is based. Made entirely of steel, framed like a bridge truss, it is unbreakable and remains absolutely accurate after years of daily use.

This box is furnished with Disston Saws in five sizes. All sizes have a capacity of 10 1/2 inches at right angles and 7 1/4 inches at mitre. The saw can be set and locked at any angle as indicated on the graduated arc.

*For further details send

GOODELL

1 5 0 0

For the Home Mechanic

It's easy enough to cut glass with a good cutter like this Goodell-Pratt turret head cutter. Just run the cutter alongside a ruler lightly—not bearing on too hard—and the sharp little wheel makes a clean scratch across the glass. Glass is so brittle it readily breaks at the scratch. The six cutter wheels in the turret head insure a sharp cutter for a lifetime at an outlay of 30c.

The machinists' handy set consists of fifteen tool-steel chisels and punches in a convenient case. For metal working, ornamental or practical (as on an automobile), these tools are invaluable, and they cost only \$2.00.

PRATT

GOOD TOOLS

A TOOL to carry in your pocket, in the house, in the car, in the motor boat, on camping or fishing trips—that's what this pocket screw driver is. It really will go in the pocket—it's only $3\frac{1}{4}$ inches long when closed—but it's strong enough for every ordinary use, and has three different-sized blades, all for 65c. Try it and see.

More Miles From Gasoline

Guaranteed With the Wilmo Manifold

The Wilmo Manifold is a one-piece casting combining the function of both intake and exhaust manifolds.

Exhaust gases heat dividing wall which in turn superheats and completely vaporizes gasoline at intake ports.

Insures a smoother running motor at all speeds. Gives virtually same increased efficiency from lower grades of gasoline.

Present Sizes and Prices

Ford-T	\$ 7.50
Maxwell-25	8.50
Overland-98-89-79	10.00
Studebaker-17-4	10.00
Saxon-6	12.00
Overland-81-83-85	10.00

Buick-6-D44-45	15.00
Studebaker-17-6	15.00

Manifolds for other makes of cars will be added from time to time.

We also have another decarbonizing and gasoline economizing device for all other automobiles and trucks not listed above.

Don't blame the gasoline or carburetor when you're "short" on mileage and "long" on carbon. You haven't given them a fair show, that's all.

Let the Wilmo Manifold vaporize every drop of gasoline so that it enters the cylinders full of pep, every atom available in the form of clean, full bodied power that gets your car off instantly with all cylinders a'hitting, and that gives you up to 59% more mileage for the same gasoline money.

And, with all this, carbon troubles practically eliminated.

Official tests sanctioned by the American Automobile Association show an increased mileage of from 42% to 54% as a direct result of Wilmo Manifold efficiency. Other official tests show up to 59% mileage increase. Letters from users show even more—but we're content to abide by the official figures.

Sizes and prices are shown to the left. The Wilmo Manifold can be attached in thirty minutes with an ordinary monkey-wrench. No holes to bore.

Sold by garages, hardware and auto supply dealers everywhere. If unable to secure one near-by order direct. Give your dealer's name, and we will deliver through him.

Do Your Tires Suit You?

Perhaps you are satisfied with the service being given you by the tires you use. If you are, that is well, and the limit of any tire's accomplishment.

But perhaps you feel as does another portion of the motoring public, that your tire money should buy a little more, in miles and untroubled travel, than it does now.

As much more, say, as the highest type of materials and method could give.

If you feel this way, we suggest that you swing with the general trend, and try Goodyear Tires.

They are the preferred tires of this hemisphere—more of them are bought by the motorists of America than of any other brand.

A quality of materials and a type of method less than the highest could not sustain this tremendous popularity.

A tire less than immensely superior could not increase it—as Goodyears are doing.

Goodyear Tires, Heavy Tourist Tubes and "Fire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

A Lightning Edge on Safety Blades

A keener edge than you ever felt. An edge that will flash through the stiffest, wiriest hair. Only a few strokes works marvels on any safety blade. You can't fail to get a lightning edge. You can't misuse a Stag Sharpener. A child can sharpen blades on a Stag as well as an expert. Makes old blades better than new. Makes new blades better.

Complete \$1 postpaid to you on this special offer
Stag Sharpener

with barber's hone and strop complete, on our money back guarantee

\$1

Protect Yourself

A dull razor is dangerous to health and life itself. The Stag Sharpener is a health protection as well as a positive luxury in shaving. The truest, simplest, quickest, easiest safety blade sharpener on earth.

Sharpen Any Blade

A Stag Sharpener is the only safety blade sharpener ever awarded the grand prize at an international Exposition.

Positively gives new blades a better shaving edge. Puts the oldest, dullest blades in lightning edge condition. Gives new blades a better edge than when they come from the factory. You can never know the delights of shaving with a positively perfect razor edge, until you sharpen your own blades with the Stag Sharpener. The quickest way. The truest way. The surest way. The safest way. The easiest way. The wheels of the sharpener guide the angle. Nothing to adjust. Nothing to get out of order. Practically lasts a lifetime. Our new patented feature makes the Stag more desirable than ever. Stag Sharpeners are used around the world. The new patented simplified sharpener is more popular than ever. Complete outfit includes

heavily nickeled sharpener, barber's hone and strop, in neat box, suitable for traveler's kit. Complete, postpaid to you only \$1. Send now.

Sent on FREE TRIAL

Try a Stag Sharpener at our risk and at our expense. Use it ten days free. Use it at our risk and at our expense. Then if you are not delighted, send it back and get your money back in full. We gladly assume the risk and welcome your order on this liberal, free trial, money back guarantee. Send only \$1 today.

Hone and Strop Free

With every Stag Sharpener we send a barber's hone and strop free. It is a part of the Stag outfit. The new patented, simplified improvements in the perfected Stag Sharpener and a new broad-width barber's hone and strop in attractive kit-box, all complete only \$1. Two minutes after you open the box, you can enjoy the first soft, smooth, silent shave with a lightning Stag edge. You will wonder how you ever got along without a Stag. It is the most suitable and welcome gift for any man for birthdays, weddings, or any occasion.

STAG sharpens all safety blades and welcome gift for any man. **SEND \$1 TODAY.**

You Can't Move Too Fast for Chalmers "Porosknit"

No matter how fast you walk or run, or how strenuously you exercise, Chalmers "Porosknit" Underwear moves *with* you—and keeps you cool.

Its little "holes" let the heat of your body escape and allow the fresh, cooling air to get to your skin, stimulating rapid evaporation.

Its fabric instantly absorbs perspiration, keeping you comfortable on the stickiest day.

Give this genuine "Porosknit" a severe test.

Wear it when you are "playing your game"—it will produce a zone of coolness next your skin.

You cannot but be delighted with "Porosknit" Union Suits with the elastic Closed Crotch that cannot cut. Made of the best materials, well tailored to fit without tightness or bagginess.

Seams are reinforced; buttons well sewed on. Thorough washing is so easy that laundry wear and tear is much reduced.

Turn them over

WHEN you buy a pair of shoes, turn them over and see what kind of soles they have. If the soles are Rinex, have the salesman wrap them up—you've got your money's worth.

Rinex is the wonderful, new shoe-sole material. It is neither leather nor rubber, but a material which combines the advantages of both.

It is more durable and uniform than leather and as light in weight; it is as flexible as rubber—and waterproof.

Rinex was invented and perfected in the great laboratories of the world's largest rubber company. Unlike leather, it comes in just one quality—the highest possible.

So, whether you pay \$4 for shoes or \$8, the word "Rinex" on the sole guarantees that you are getting the best sole-material ever devised by man.

Rinex Soles are also being put on by the best shoe-repairmen. Ask for them when you need new soles and see how much longer they last than leather and how much more comfortable they are.

SAXON ROADSTER

A CAR COMPLETELY EQUIPPED WITH EVERY MODERN FEATURE

The Lowest-Priced Completely Equipped Car On the Motor Car Market

This car—this new series Saxon Roadster—is the only motor car at less than \$500 that is completely equipped to the last detail.

In keeping with the pace set by the expensive cars, Saxon Roadster now has a fine 2-unit electric starting and lighting system.

It is a system built by Wagner that any car might envy—but no car surpass.

Simply press a button placed conveniently for your heel and your motor is started.

Can you picture yourself buying any car that must be cranked by hand when you can have such a car as Saxon Roadster for less than \$500?

Outwardly its beauty has been heightened by a new style body design. Inwardly its comfort has been increased through the larger size of the body, the greater roomi-

ness, and added seat space and leg room.

Demountable rims are now part of the equipment. So in event of tire mishap a change is readily made without trouble.

There are also 30-inch by 3-inch tires. And among other attractions are the 3-speed transmission; high-speed Saxon-Continental motor; Reichenbach carburetor; Hyatt Quiet bearings; honeycomb radiator; Atwater-Kent ignition; extra long cantilever springs; new style top with Grecian rear bow; 40-inch wide seat; electric horn; speedometer; extra tire carrier; ventilating windshield; adjustable pedals; and twenty further refinements.

The Saxon Roadster is \$495; Saxon "Six" Touring Car, \$865; Six Sedan, \$1250, f. o. b. Detroit. Canadian Prices—Six Cylinder Touring Car, \$1175; Touring Sedan, \$1675; Four-Cylinder Roadster, \$665. Price of special export models, "Six," \$915; Four, \$495; f. o. b. Detroit.

It's Economy to Take Care of Fine Clothes

The old-fashioned washboard method is hard on the clothes, hard on the help and slows up the housework.

The new way cleans the clothes by gently rocking them through hot suds. For "Clothes Insurance" get a

Western Electric Washer and Wringer

Here is an economical purchase at even an apparently large investment. But one hundred dollars is not a lot of money when figured as a business man does—on a *dividend* basis. Your "dividends" will be clothes and linens that wear longer and look better, and labor saved.

The Western Electric Washer cleans thoroughly and without damage. It turns wash-day and iron-day into one "laundry day," whether you yourself, your maid, or a laundress employed by the day does the work. At the existing high cost of domestic labor a Western Electric Washer will soon pay for itself.

There is a plan by which you can have a demonstration right in your own home. Write for details and a copy of Booklet No. 99-AW.

I want, through this advertisement, to establish as friendly business relations with you as I possibly can. I want you to realize also that it is my earnest effort and intention to give you full honest value for every dollar that you spend with me. This is the only way I can succeed. My advertisement has appeared in this magazine continuously for more than four years.

I am building up my business on the foundation of good value and square dealings. I am saving thousands of satisfied customers thousands of dollars, by supplying perfect—late style—visible writing—typewriters, at remarkably low prices.

All my transactions are handled throughout by personal correspondence. I assure you every courtesy and consideration in your dealings with me. Your order will have my prompt, careful, personal attention. I will be glad to do business with you.

Harry A. Smith

TYPEWRITER SENSATION

Free TRIAL—Use As You Pay

Send me only \$2.00 a month until the low total price of \$34.15 is paid, and the machine is yours

This is absolutely the most generous typewriter offer ever made. Do not rent a machine when you can pay \$2.00 a month and own one. Think of it—Buying a \$100.00 machine for \$34.15. Cash price, \$32.30. Never before has anything like this been attempted.

Standard Visible SMITH Model No. 6

Perfect machines. Standard Size, Keyboard of Standard Universal arrangement, writing 84 characters—universally used in teaching the touch system. The entire line of writing completely visible at all times, has the tabulator, the back spacer; in fact, every late style feature and modern operating convenience. Comes to you with everything complete, tools, cover, operating book and instructions, ribbon, practice paper—nothing extra to buy. You cannot imagine the perfection of this beautiful typewriter until you have seen it. I have a thousand of these perfect latest style Model No. 6 typewriters at this bargain price, and each purchaser fortunate enough to secure one of these beautiful machines must try it out in home or office for five days before deciding to buy. I will send it to you P. O. R. Chicago for five days' free trial. It will sell itself, but if you are not satisfied that this is the greatest typewriter bargain you ever saw, you can return it at my expense. You won't want to return it after you try it—you cannot equal this wonderful value anywhere.

H. A. SMITH
Room 510-231 N. Fifth Ave.
CHICAGO, ILL.

Ship me a No. 6 Smith P. O. R. Chicago, as described in this advertisement. I will pay you the \$28.00 balance of the SPECIAL \$34.15 purchase price, at the rate of \$2.00 per month. The title to remain in you until fully paid for. It is understood that I have five days in which to examine and try the typewriter. If I choose not to keep it I will carefully repack it and return it to the express agent. It is understood that you give the standard guarantee for one year.

You Take No Risk—Put In Your Order Now

When the typewriter arrives deposit with the express agent \$5.15 and take the machine for five days' trial. If you are convinced that it is the best typewriter you ever saw, keep it and send me \$2.00 a month until my bargain price of \$34.15 is paid. If you don't want it, return it to the express agent, receive your \$5.15 and return the machine to me. I will pay the return express charges. This machine is guaranteed just as if you paid \$100.00 for it. It is standard. Thousands and thousands of people own and use these typewriters and find them the best ever manufactured.

The supply at this price is very limited, the price will probably be raised when my next advertisement appears, so don't delay. Fill in the coupon today—mail to me—the typewriter will be shipped promptly. There is no red tape. I employ no collectors—no collectors—no chattel mortgage. It is simply understood that I retain title to the machine until the full \$34.15 is paid. You cannot lose. It is the greatest typewriter opportunity you will ever have. Do not send me one cent. Get the coupon in the mails today—sure.

Eleven Rooms Heated for \$35

Another Guaranteed
Underfeed Saving

Just read the following letter. It tells its own eloquent story of *guaranteed* saving and comfort with a Williamson UNDERFEED. Then remember, there are over forty thousand other Williamson UNDERFEED users enjoying the same economy and heating efficiency. Here's the letter:

"The UNDERFEED is built on the right principle for obtaining all of the heat from the coal. The cost of heating my residence, consisting of eleven rooms, three stories high, for the past three years has been only a trifle more than the ice bill of the summer, the average for that period being less than thirty-five dollars a season."

(Signed) Clay H. Alexander, Counsellor at Law, Kansas City, Mo.

And, what is more, the Williamson UNDERFEED means less work. No stooping. A few easy strokes of a lever from a standing position replenishes the fuel supply. Easy to operate when the man of the house is away.

WILLIAMSON UNDERFEED Furnaces Boilers

Cut Coal Bills $\frac{1}{2}$ to $\frac{2}{3}$ Guaranteed

The UNDERFEED effects a first great saving by burning the cheaper grades of coal as effectively as others burn the costlier grades.

Because of the scientific principle of combustion, as explained to the right, there are no clinkers, no partly burned coals. Gas, smoke or soot—valuable heat elements—are consumed as they pass up through the fire. Ashes clean and white.

Money-Saving Book Free

It is called "From Overfed to UNDERFEED" and pictures and describes the scientific UNDERFEED principle. Send for this book now, it will save you good money some time, whether you heat with warm air, hot water, steam or vapor—a saving of $\frac{1}{2}$ to $\frac{2}{3}$ in coal cost—guaranteed with the UNDERFEED. Send coupon NOW—no cost—no obligation.

THE WILLIAMSON HEATER CO.
45 Fifth Avenue CINCINNATI, O.

Cut-out this coupon and the UNDERFEED burns coal on the candle principle. Fresh coal is fed from below. Clean, hot fire always on top in direct contact with most efficient radiating surfaces. Fire never choked or smothered. All heat utilized instead of disappearing up the chimney in the form of smoke, gas and soot.

THE WILLIAMSON HEATER CO.
45 Fifth Ave., Cincinnati, O.

Before You Buy A Watch Anywhere

World-Famous Watches at the Lowest Prices in the UNITED STATES!

Why pay retail prices for watches when you can buy the world's standard makes at practically the *wholesale* cost and save, in many instances, approximately 40%? For example, a 16 Size Hamilton No. 974—17 Jewel Adjusted Watch complete in 25 year gold filled case, sells at retail for \$21.00 to \$25.00—this very same watch can be bought direct from us at the wholesale cash price of only \$14.50! Think of that! Get our beautiful 226-page catalog just off the press, and you will be utterly amazed at the way we undersell all others in the United States. In this great book you will see all the world's most famous watches illustrated and described—Elgin, Waltham, Hamilton, Illinois, etc., etc. Page after page opens before you with such positively sensational values that there will be no question in your mind of our being the lowest-priced distributors in the country.

FREE Examination See It Before You Pay for It!

So as to absolutely convince you that you are getting exactly what you order, and that the big value you get is true in every respect, we will gladly send you a selection at our expense, to any bank or express, and let you see it before you pay a penny. Write today for our 226-page catalog. It is the greatest authority on watches ever published. And it is free for the asking.

The Skeptic About Corns

Some years ago a famous chemist invented the Blue-jay plaster.

In a bit of red wax he combined ingredients which no corn can resist.

Through us he offered to all people this sure ender of a corn.

But people said, "We've heard such claims before." They had used harsh, old-time methods which proved inefficient.

The same folks tried this Blue-jay, and each told others.

Since then this method has removed some 80 million corns.

Here is a way that's gentle, scientific, sure. It is applied in a jiffy. It costs but a few cents per corn.

It stops the pain instantly. It ends the corn in two days—that is, nine corns in ten. The stubborn ones need a second application.

It makes corns forever needless. Corn aches become unknown. For your own sake, prove this. Stop paring corns. Learn how easy it is to end them. Prove it tonight.

STOP USING A TRUSS

Do Away With Steel And Rubber Bands

Inner surface is made adhesive to secure the PLAPAO-PAD firmly to the body, keeping the PLAPAO continually applied and the pad from slipping. No straps, buckles or springs attached. Soft as velvet—easy to apply.

It's the Non-Slip- ping, yet Non- Rigid Pad and What Is Within It That Counts

FREE to 5,000 Truss Sufferers

To the extent of 5,000 sufferers who may apply I will send, ABSOLUTELY FREE, a sufficient quantity of the Plapao to positively convince them that this is the only logical, common-sense way of treating rupture. Plapao is a highly astingent medication placed within the Plapao-Pad and being absorbed through the skin, creates a wonderful feeling of relief and at the same time tends to strengthen the weakened muscles and thus permanently close the rupture opening. The process of recovery is natural, so you'll have no use for a truss—you can throw it away forever! Old and young have testified under oath that the Plapao-Pads cure their rupture—many of them long-standing, aggravated cases—without delay from work. Patent allowed in U. S. and foreign countries. Awarded Gold Medal at Rome and Grand Prix at Paris.

Send No Money—For a sufficient quantity of the Plapao I will send without charge to enable you to give it a thorough test; you pay nothing for this trial now or ever. Write for it and full information today. Address: Plapao Laboratories, Block 1487 St. Louis, Mo.

Please tell me about the Model 5 L. C. Smith Typewriter and quote the "special" Introductory Factory-to-Family price.

Name.....

Address.....

From 100 to 5000

Used by America's Great Institutions

Doesn't this tell a story of great superiority? Do you think for one moment that the United States Government would use 5000 Model 5's, L. C. Smith Visible Typewriters unless they were the peer of many other Typewriters that could be bought for less money? Uncle Sam is looking for service rather than the immediate saving of a few dollars. Scores of this country's great institutions use this same Model 5. They demand a Typewriter that will give the longest maximum service for the smallest upkeep cost. Evidently the Model 5 demonstrates that it is such a Typewriter, otherwise would it be so widely used?

500 Visible 5's Used in Our Offices

We ourselves are well acquainted with the value of this Model 5 as a dependable business Typewriter, one that stands up under constant, everyday usage. On our batteries of Model 5's we write more than 5000 letters daily in serving our two million customers. We have used this Typewriter for years. Therefore we offer you a Typewriter which we know by long service test to be a machine that will not disappoint you.

Get the Introductory Price On Model 5 L. C. Smith Typewriters

This Typewriter makes friends. One sold lends to others sold in the same community, for our offer on this genuine factory-rebuilt Model 5 is admittedly the surprise Typewriter offer of the season. So we are naming a "special" Introductory Factory-to-Family price for the purpose of placing a great number of Model 5's into new communities. We depend on these Typewriters to spread the fame of this Typewriter and of the benefits gotten from Larkin Factory-to-Family dealing. You will do well to send the coupon now for the details.

100 New Model 5's Made Each Day

At times the manufacturers are hard pressed to meet the demand for new Model 5's although their output totals 100 or more of this model daily. We offer you therefore a Typewriter in great demand and not a discarded model. You'll be agreeably surprised the day you get the details of our liberal offer. The coupon awaits your name. Send it now.

SPECIAL—Model 2's at \$45.30

Here's Health

—vim, vigor, vitality! The keen, vivid relish of youth for work and pleasure! **Snap, ginger, punch in every thought and action!** The joy of glorious health, strength, power, life—yours through vibration.

Wake up that sluggish circulation! Send the rich, red blood leaping along through every vein and artery! Tune up those jangled nerves! Stir up those sluggish organs! Flood your whole body with **health!** Don't be satisfied with mere existence! **Begin to live!**

Arnold Vibrator

Try this wonderful machine yourself. Test it on your own body. Notice the difference after the very first treatment. See how pleasant and easy it is to use—how marvelous the results. And don't forget that these results are permanent because vibration gets right at the cause of things—goes to the very root of the trouble. Aches and pains vanish like magic. You don't need to take anybody's word for these things—you can find out for yourself.

10 Days' Trial Free

Get the facts about our generous free trial offer. Learn how you may get these things yourself **at our risk**, and if you are familiar with the prices asked for ordinary vibrators you will be amazed to find how much less it costs to own the genuine guaranteed Arnold Vibrator. When there is so much at stake why risk buying an imitation unknown machine? Insist on the Arnold. Ask for it by name.

80-Page Book Free

Your name and address on the coupon or a postal or letter brings you valuable 80-page book on Vibration free and full particulars of our special offer.

Shingled Houses

are warmer in winter and cooler in summer than tiled, slated, clap-boarded, or gummed-paper houses. They cover the surface with three insulating layers and non-conducting air-spaces, and no other finish does this. They are also much more picturesque and attractive, and they admit of far more varied and beautiful coloring than any other finish.

Cabot's Creosote Stains

color them in beautiful tones of moss-green, hick-brown, silver-gray, etc., and the creosote thoroughly preserves the wood and makes it less inflammable.

You can get Cabot's Stains all over the country. Send for stained wood samples and name of nearest agent.

South Bend

The Watch with the Purple Ribbon

Accuracy

is the first thing I require of a watch; but, to be up to my standard, it must also be trim and stylish—a watch I may be proud to show.

That's why I bought a South Bend. And the Purple Ribbon Timepiece is certainly living up to its reputation. The model I am carrying is the new 19-jewel *Extra-Thin* watch at \$27.50. For, while I want accuracy, service and beauty, I don't want to pay fancy prices for them. My jeweler assured me that in no other watch could I have obtained such value for the price and my experience confirms his statement.

* * *

Other models if you wish them at \$16 to \$125. See YOUR jeweler and send for our interesting booklet, "The Making of a Marvelous Mechanism."

**EVEREADY
SAFETY LIGHTS**

**American Ever Ready Works
of National Carbon Co.
Long Island City, New York**

1 Safety Razor Blade does the work of 4

When magnified, the cutting edge of a razor blade looks like a saw. After shaving, no matter how well you wipe the blade, moisture still clings between the microscopic teeth. As a consequence, very tiny particles of rust form and the blade becomes dull and "pulls". Put 3-in-One on your blade before and after shaving. Then rust can't possibly form. A little 3-in-One on your strop keeps it soft and makes the razor "cling" when stropping.

Try it and see. Your blades will last twice as long and shave cleaner. Send for our booklet "A Razor Saver" and **FREE** generous sample of 3-in-One Oil.

Three-in-One Oil Co., 42CNR., Broadway, N. Y.

INDOOR CLOSET

**More Comfortable, Healthful
and Convenient than the Out-Door Closet**

Eliminates the out-door closet and open vault. They are breeding places for germs. Have a warm, sanitary, odorless toilet right in your house. No going out in cold weather. A boon to invalids. Endorsed by State Boards of Health. W. M. Davis writes: "Your indoor closet is giving absolute satisfaction. It is certainly the thing for a home without sewerage."

**Absolutely Odorless
Put It Anywhere in the House**

The germs are killed by a chemical process in water in the container, which you empty once a month. **Absolutely no odor.** No more trouble to empty than dishwater. **Used absolutely guaranteed.** Write for full description and price.

Agents Wanted — Big Profits Wonderful opportunities in every town, village and in the country. Best season just at hand. Every home is a good prospect. Sell eight out of every ten you call on. Earnest M. Davis writes, "Have ten orders." A. A. Diamond says: "Ship at once, twenty closets and fifteen washstands. Sold them all in one month." Sell itself. Everybody hates the outdoor closet. Everybody wants a Ro-San Indoor Closet. Write quick for terms and full particulars.

With Automatic Friction and Ratchet Feeds

IT'S the one big improvement in Bench Drills. You'll appreciate the advantage of the "Yankee" Bench Drill. A Friction Feed brings Drill to work or quickly removes it. An Automatic Ratchet Feed ensures steady, uniform feeding of all size drills, saving breakage of drills. Contact of lever with knock-offs at extreme down or up of movement changes feed from Ratchet to Friction. Then spindle runs free—gears cannot "jam." An accident proof bench drill, that does more accurate work and does it quickly.

"Brown & Sharpe Tools Will Help You in Your Work"

A MACHINE-SHOP TRADITION

There seems to be a tradition in most machine shops that the older man should acquaint his younger shopmates with the importance of Brown & Sharpe Tools in maintaining accuracy in their work. He speaks with experience—mature experience. That he is heeded is proven by the ever increasing demand for Brown & Sharpe Tools.

Send for Catalog 27 Today—It's FREE

Brown & Sharpe Mfg. Co., Providence, R. I., U. S. A.

day and sent in to this man a request for a loan of \$5. The money was given, and to prove to a visitor that the man was really the one the banker said he was, he asked for a receipt for the \$5. The name attached to the receipt was one made famous by the father of the borrower. We mention the incident merely as a true story of striking changes that come in the lives of men, who have inherited great names and lost all though one enemy—alcohol.

"Interlox" Just the **Rule** for Mechanics, Carpenters, Engineers, etc.

Every Builder and Contractor Needs this Level

10 Days' Free Trial

We have been makers of transits and levels since 1883 and our instruments are the standard of the world. Prove the superior quality of the Aloe Convertible Level by giving it a 10-day free trial. Use it on your every-day work laying out buildings, leveling up foundations, walls and floors, aligning, sheathing walls, piers, etc., for getting angles or levels anywhere.

Easy Monthly Payments

If you decide to keep it, the instrument will earn its way while you make monthly payments so small that you hardly feel them. Costs no more than to pay all cash. No red tape about it, no embarrassing questions, everything confidential.

Aloe Convertible Level

Is the finest instrument ever offered at anywhere near its price. Permits taking of sights both above and below the horizontal. For taking vertical sights it is provided with a special convertible bracket rigidly and permanently attached to the cross bar. The telescope is fitted with permanent axis which runs in bracket bearings and is held by clasp easily and quickly released.

Aside from being a level, it is a modified transit that permits a much wider range of work than is possible with the ordinary architect's level. With it the man without technical training can obtain the same absolutely accurate results as the expert. Write today for descriptive circular.

AN LA ENGINE FOR EVERY PURSE AND PURPOSE

SIXTY-FIVE THOUSAND PEOPLE ENDORSE YOUR JUDGMENT

THAT is what happens when you buy a Mullins boat. There are 65,000 Mullins boats in use—every one giving satisfaction. Whether you need a motor boat—or a rowboat or canoe, you can't go wrong when you buy a Mullins.

MULLINS STEEL BOATS CAN'T SINK

Designed by America's leading naval architects, built in the world's largest boat factory, Mullins steel boats cannot leak, water log, dry out, warp or open at the seams—need no boat house and never require calking.

The motor boats are powered with 2 and 4-cycle engines, correctly installed and equipped with Silent Under-water Exhaust. They are light, graceful and speedy. Whether you wish to pole, row or motor in fresh or salt, deep or shallow water, you need a Mullins boat. Forty models now ready for delivery.

Write for big catalog of steel and wooden motor boats, rowboats and canoes—free.

WANTED IDEAS

**Inquiries from Manufacturers and Other Buyers of Patents
Who Are Looking for Good Ideas**

Protected by Owen Patents

Are constantly being received. Hundreds of ideas are wanted—a market exists for them to-day. YOURS may be one of them. Send for my free books and see for yourself—read the requests for inventions protected by me. Many are simple. You can help supply this demand.

As soon as my clients' rights are protected I aid in every practicable way, without charge, to sell. Their applications are advertised free—their patents are called to the attention of the proper prospective buyers—every necessary thing is done. Get my booklets and see.

THESE ARE FREE

You will incur no obligation by writing me. A simple request will bring them to you—the finest, most reliable and instructive patent books published. A postal will do.

"Successful Patents"—a 72 page guide book, tells how to proceed; describes my advantageous business methods; gives references, testimonials, etc.

"Stepping Stones"—gives hundreds of hints of inventions wanted; articles from interviews of noted authorities; tells the truth about prizes for inventions.

"Patent Promotion"—tells you how to sell; why some inventors fail; discusses the value of your idea; how I aid my clients; manufacturing aids furnished you; recent successful patents, etc.

"Patent Buyers"—Publishes letters, and abstracts of letters, from over 400 of the many manufacturers, and other patent buyers, who wish to buy, or obtain on royalty, Owen Patents on innumerable inventions of interest to them.

You will also be sent from time to time, as new inventions are wanted, full information concerning them. Only in this way can you keep up to date.

WRITE FOR THESE TO-DAY—Advice costs nothing. All communications confidential. Your work will receive my personal supervision—but my fees are no higher than others.

Inventors submitting their inventions to me are protected in a tangible manner until their applications are filed.

Nuts for You to Crack

Invent something for which a demand exists—for which there is a waiting market. Here are abstracts from a few recent requests—hundreds are published in full in my literature. Can you invent any of these? Watch this list each month.

An investor with money writes, "I am looking for a window burglar alarm or something small that will be a fair-seller."

A large manufacturer wants patents upon "novelties, machines, etc., which could be retailed from one cent to fifty dollars."

A financier wants to purchase inventions "along the lines of toys, household and office novelties, and mechanical devices which could be handled by a mail order house."

Still another manufacturer wants to get in communication with any clients of mine "that have obtained patents on tricks, puzzles, or novelties." They also state, "we are always interested in any new articles of this kind and are in a position to place anything of a practical nature on the market." There is a big field for the right article.

SPECIAL FREE REPORT

Send sketch or model of your invention for free report on patentability, practicability, etc.

PATENTS TRADE-MARKS AND COPYRIGHTS

**LARGEST PATENT FIRM
IN THE WORLD**

SPECIAL OFFER

Free Opinion as to Patentability

Before sending your invention to any attorney or manufacturer or disclosing your invention, write for our free blank form **PROOF OF CONCEPTION** in order to protect your invention and secure your rights. This should be signed and witnessed and returned to us, together with a model or sketch and description of your invention, and we will give a **FREE OPINION** as to the patentability of the invention. If we report the invention patentable we will furnish a Certificate of Patentability.

This Certificate of Patentability, together with our blank form Proof of Conception will protect the inventor and serve as proof of the invention until the case can be filed in the U. S. Patent Office.

Obtaining Assistance for Inventors—Our certificate is of great assistance to inventors who require financial aid to obtain patents.

WATSON E. COLEMAN, Patent Lawyer, 624 F St., Washington, D. C.

PATENTS SOLD

All the service many of the Patent Attorneys render an inventor, is to procure his patent. They will not undertake to sell it for him, or aid him in obtaining some financial return for the money he has expended, or the reward of his genius.

Where an inventor takes out a patent through my office and wishes to sell it, I place same before leading manufacturers and submit all offers to the inventor.

I am frequently receiving letters from manufacturers and others who state they wish to purchase good patents on good inventions that they can place on the market, and the names and addresses of these persons are also furnished to my clients.

My commission for selling patents is ten per cent. of the net purchase price, and no charge is made unless the sale is made and you get your money.

I am a BONDED Patent Lawyer in the Rand-McNally Directory of Bankers and Attorneys, Published by Rand-McNally & Co., Chicago, Ill., the bond being issued by The American Surety Company of New York City. I am also a guaranteed and recommended Patent Attorney in the Bankers Register and special list of selected lawyers published by the Credit Company, Pontiac Building, Chicago, also recommended Patent Lawyer in Sharp & Alleman's Directory of Lawyers and Bankers, published at Philadelphia, Martindale's American Legal Directory of New York City, and the Con. P. Curran Directory of Bankers and Lawyers, published at St. Louis.

Four New Booklets for Inventors

Check full of ideas and practical advice.

Tell what to invent and where to sell it.

"Patents and Patent Possibilities," and "Practical Suggestions for Inventors" are bristling with facts that every inventor should have. They explain how many of my clients have made money from patents procured by me. What I have done for them I can do for you. If you have inventive genius and the will power to use it, the "Inventors Loose Leaf Record File" will enable you systematically to preserve evidence to prove priority of invention on your part in the event of a controversy. These booklets are unlike anything ever issued for inventors; they were prepared with the idea of service. If you are interested in inventions send for these books; they are free while they last. My service is individual, prompt, efficient and satisfactory. (10 years' experience). I am frank in my opinion on the value and patentability of inventions. Every expeditious employed to secure patents at the least possible cost.

Manufacturers Calling for Over Two Hundred Inventions

Money Is Waiting to Back the Good Idea

(By a Washington Patent Attorney)

Never was there so good an opportunity for the inventor of something — *anything* — of merit as right now.

Jersey City man's invention sells quickly.

Manufacturers with money and facilities are asking for ideas — *calling* for them. The supply is not nearly equal to demand. Over 200 inventions are asked for in a list just given in a little book "What to Invent." The demand is not for anything extraordinary — just the common everyday things that make work easier or life more pleasant in the household, the shop or the field.

You might think the possibilities of the window screen had been exhausted, but I know of 28 concerns that are looking for a new screen, duly covered by patent, which they can manufacture. I know of 46 manufacturers and others who are ready to manufacture any good, patented household article such as can openers, baking pans, coffee pots, washing machines, carpet sweepers and other devices.

Within the last few weeks I have received forty special requests for a dishwasher and drainer; seventeen others request an improvement in scissors. Manufacturers know that everyone must have a pair of scissors in the house, and they realize that a novelty in them would always sell in place of the old kind, and hence the demand. Among my letters are sixteen requests for a device to turn sheet music on a music stand or piano, and seventeen people are interested in the purchase of a patent on a device for holding an electric light in any position. Besides these there are hundreds of manufacturers who do not specify any particular device but state that they would be interested in anything of merit.

Coupling hook adopted by Pennsylvania R. R.

A Chicago man says: "I want something that can be sold to farmers by mail. There is practically no limit to the investment my associates would make in a good proposition." A man in Woodhaven, N. Y., says he is in the market for a small household article, light in weight, which can be sold somewhere around ten cents.

A prominent manufacturing company is interested in something to sell to hardware stores, but would also be interested in other things promising to be money-makers.

A man in Revere, Mass., says: "I am looking for something that can be manufactured, plant equipped, etc., and marketed for an outlay of not over twenty-five thousand dollars."

A big textile machinery company says they are interested in newly patented devices that can be either bought outright or manufactured on royalty. They do not require machinery inventions alone, but anything of merit.

A company in Belvidere, Illinois, wants patents on small tools or metal novelties.

A fortune in this invention

A Dayton, Ohio, concern writes for some machine or device that would have a general sale throughout the land.

The names and addresses of these prospective purchasers are supplied absolutely without charge by Messrs. Chandless & Chandless to those who obtain patents through their firm. This firm has been in practice before the Patent Office for over twenty years, and its members are, consequently, familiar with every detail of patent work. They also issue a booklet entitled "How to Obtain a Patent," which tells in simple words just how to go about protecting an invention. The two books, "What to Invent" and "How to Obtain a Patent," are both free. Why don't you write for them and learn what manufacturers are looking for and how to protect your ideas? If you have an invention, send a sketch or model and description of it to Chandless & Chandless, 1011 F Street, Washington, D. C. They will give you a free opinion as to whether or not it can be patented.

U.S. PATENTS FREE → BOOK & FORM EVERY INVENTOR SHOULD USE:

Without charge or obligation, we will give you our frank opinion on any questions you may put to us touching on patent, trade mark and copyright matters. You may ask, "Should I protect myself by a patent, or register under the trade mark or copyright laws? What kind of a patent should I obtain? What will it cost? Will it sell?" and many other questions that may occur to you. These are vital points to consider, and questions will be cheerfully answered. If you want suggestions on what to invent, in our *Bulletins of Improvements Wanted*, which are sent free to all on our mailing list, you will find the wants of progressive manufacturers and valuable information. All matters are held strictly confidential, and personal services are assured by our *Service Guarantee Contract*. References: 2nd National Bank, Washington, D. C.; John P. Roth Packing Co., Cincinnati. Ohio; Duskil Mop Co., Paducah, Kentucky; North Capitol Savings Bank, Washington, D. C. Listed in the Bankers' and Brokers' Directory.

OUR CO-OPERATION

With an inventor is, **First**, to help him establish his rights before sending a sketch, drawing or model to any attorney; **Second**, to give a frank opinion, whether it will pay to patent his idea, based upon our extensive knowledge of the patent laws, manufacturers' wants and facilities; **Third**, to obtain for him on reasonable terms, a patent that absolutely protects; and, **Fourth**, advise and assist him in making the invention a source of profit by outright sale, territorial grants, obtaining royalty, or the independent manufacture of the invention.

Before disclosing the invention to anyone, sign, witness and deposit in our fireproof safe, the form "Evidence of Conception" and establish your rights. A completed sample form in our book shows you clearly how to protect your invention. All are free. Just ask for them on a postcard or simply mail coupon below.

Tobacco Habit BANISHED

in 48 to 72 Hours

Immediate Results

Trying to quit the tobacco habit unaided is a losing fight against heavy odds, and means a serious shock to your nervous system. So don't try it! Make the tobacco habit quit you. It will quit you if you will just take Tobacco Redeemer according to directions.

It doesn't make a particle of difference whether you've been a user of tobacco for a single month or for 50 years, or how much you use, or in what form you use it. Whether you smoke cigars, cigarettes, pipe, chew plug or fine cut or use snuff Tobacco Redeemer will positively remove all craving for tobacco in any form in from 48 to 72 hours. Your tobacco craving will begin to decrease after the very first dose—there's no long waiting for results.

Tobacco Redeemer contains no habit-forming drugs of any kind and is the most marvelously quick, absolutely scientific and thoroughly reliable remedy for the tobacco habit.

Not a Substitute

Tobacco Redeemer is in no sense a substitute for tobacco, but is a radical, efficient treatment. After finishing the treatment you have absolutely no desire to use tobacco again or to continue the use of the remedy. It quiets the nerves, and will make you feel better in every way. If you really want to quit the tobacco habit—get rid of it so completely that when you see others using it, it will not awaken the slightest desire in you—you should at once begin a course of Tobacco Redeemer treatment for the habit.

Results Absolutely Guaranteed

A single trial will convince the most skeptical. Our legal, binding, money-back guarantee goes with each full treatment. If Tobacco Redeemer fails to banish the tobacco habit when taken according to the plain and easy directions, your money will be cheerfully refunded upon demand.

Let Us Send You Convincing Proof

If you're a slave of the tobacco habit and want to find a sure, quick way of quitting "for keeps" you owe it to yourself and to your family to mail the coupon below or send your name and address on a postal and receive our free booklet on the deadly effect of tobacco on the human system, and positive proof that Tobacco Redeemer will quickly free you from the habit.

Unnecessary Indigestion

Indigestion, constipation and the ills they lead to are so *wholly unnecessary*—and cause so much *needless suffering*—that Dr. Kellogg, Chief Medical Director of the Battle Creek Sanitarium, has written a book, "Colon Hygiene", in which he tells you how such ills may be avoided. During his more than forty years' experience at the Sanitarium, Dr. Kellogg has prescribed for thousands of cases of indigestion, constipation and the more serious ills to which they lead. Therefore, what he tells you in his book, is the result of experience. He deals with facts—not theory. Dr. Kellogg recommends only natural methods—diet, exercise, rest and sleep. No drugs. Instructions given in

"Colon Hygiene" are so full, complete and plainly stated that you can easily follow them right in your own home. No tiresome regime. No exhaustive system. Only what your own common sense promptly tells you is rational and natural. Over 400 pages. Many illustrations. Price \$3. Write for the book today. You take no risk. For, after five days' examination, if you are not entirely satisfied, you may return the book for prompt refund of your money. Is this fair? We let you judge the value of this book for your own needs.

USE THE COUPON

GOOD HEALTH PUBLISHING CO.,

5304 Washington Ave., Battle Creek, Mich.

I attach \$3 for "Colon Hygiene" which I will keep or return in five days for refund.

(Write your name and address plainly in the margin.)

Are You Sure?

ON the steep down grade or the elbow turn is your brake one that you can place absolute confidence in? An unreliable brake is worse than no brake at all. It gets you into trouble. There is one way of being sure, sure for once and all time. Equip your bicycle with the recognized standard brake equipment—the

DUPLEX COASTER BRAKE

With this famous brake on your hub you can go where you please with absolute knowledge that it will control your speed no matter what demands you may make on it. Cyclists have tried it for years under all conditions and have found it never-failing.

Its action is powerful, smooth and flexible, enabling you to stop instantly or gradually. Its large ball bearings and sturdy construction make it everlastingly durable. This is the brake that has grown up with the bicycle—15 years of satisfactory service. It is 100% efficient. See that the Corbin Duplex is on your wheel. Equipped by all bicycle dealers everywhere.

"Corbin Control Means Safety Assured"

It doubles the comfort and pleasure of riding.

SEARS, ROEBUCK AND CO. CHICAGO

Learn Mechanics of Aviation

YES, right in your own home, in your spare time, you can learn all the principles, the theory and the mechanics of Aviation. You can prepare yourself for flying, if you wish. Or you can gain all the practical knowledge to equip you to enter the big paying and fascinating business of aeroplane construction and as aero-mechanical engineer. Send the coupon at once! Find out how our wonderful course in Aviation will give you the knowledge necessary to enter this field. Everybody planning to enter the Aviation fields needs the knowledge which this course offers. This is the first time that anyone has had the opportunity to gain this instruction at home—and without great sacrifice of time and expense. Waste no time in sending coupon.

Big Opportunities NOW!

What Course Covers:

Aero History—Aero Physics—Aero Dynamics—Wing Designing and Construction—Aeroplane Assembly—Balloon Building and Operating—Aeronautical Wireless.

Now is the time for every man who has considered Aviation to get into the field. Each day presents new opportunities. The pioneers are going to reap the rich rewards. Automobile history, railroad history, motion picture history will repeat itself in Aviation. The men who get in early are the men who will amass the fortunes. Right now there are opportunities for men who are experts in the mechanics of Aviation that pay anywhere from \$50 to \$500 a week. In aeroplane factories, government branches, aero societies, repair shops. Only trained men will do. Therefore this was obtainable only at a great sacrifice of time and expense by field training. Now you may secure this

same training at home—in much shorter time, a mere fraction of the expense, and without interfering with your regular work.

Endorsed by Aviation Authorities!

Leading aviators and flying organizations have endorsed this course as a quick and reliable means of training for the business and practice of Aviation.

Special Offer

Pulls you out of trouble

Carry this little Pull-U-Out in your tool box and you will be independent of road conditions. With it a boy can, unaided, pull a 5000 lb. car out of ditch or mud. Pays for itself on its first job. Besides pulling autos out of trouble it will do all kinds of lifting and pulling in the factory, garage, on the farm or construction job, etc.

Consists of a winding drum, lever crank, 40 feet of steel cable, two 7 ft. chains and 3 stakes. Weighs only 28 lbs. and goes in space 4x6x14 inches.

A pressure of only 30 lbs. on the handle will lift a ton

Cheaper and better than a chain block.
Does jobs no other machine can do.

WRITE FOR BOOKLET—VERY INTERESTING

Tells how and why this marvelous little Pull-U-Out works.

ET THROUGH MUD UP TO THE HUB

A car equipped with a New Stromberg Carburetor generates power equal to the occasion. The increased pull necessary to ram through hard, heavy going comes into play instantly on demand—a forge ahead force that is mightier than the drag of the mud.

The New Stromberg Carburetor

excels on all models of every make in creating power to answer every purpose—in mileage increase, fuel economy, acceleration and starting ease in coldest weather.

Special New Stromberg For Fords

establishes official starting, speed and economy records—37 ¹/₁₀ miles on one gallon of gasoline—from standing start to 25 miles per hour in 11.4 seconds—then without touching carburetor car made 43 miles per hour. These tests made under ordinary conditions demonstrate Stromberg superiority and value to every Ford owner.

Write for World's records and free particulars—giving name, model and year of your car.

MAKE BIG MONEY Concreting In Your Section

You can easily earn \$8 to \$20 a day with a Sheldon Batch Mixer. Our customers are doing it right now. The jobs go to the man with a Sheldon Mixer every time. Saves labor of 1 to 4 men, according to size of job. Or, if you buy machine for your own use, you can make many times its cost in a season by renting it to your neighbors.

Build Your Own Walks, Floors, Foundations, Buildings, Silos, Tanks, Troughs, etc. out of concrete with a Sheldon Batch Mixer. The ideal machine for all small jobs. Will pay for itself on first small job. Beats hand mixing a mile. And it's a lot cheaper, too. Takes the backache out of concrete. Makes possible those many small improvements about the place; you wouldn't do without it. Improvements that save time, labor and money and add many dollars in the value of your property. Just the machine you need.

Make Your Own Concrete Mixer.

At a cost so low you cannot afford to mix concrete by the shovel method. Along with our iron parts we send **Free Plans** and permit for making your own machine. Or, we will sell you the complete machine. Two styles, hand or power. Will mix 2½ cu. ft. a minute. Keeps 1 to 4 men busy. Has chain drive, self-tilting dump, easily moved, and all parts guaranteed. Does work equal to \$400 machines, costs less than 1-10 as much. No other machine like it. Patented.

Write for FREE Catalog and Special Offer

Shows our full line. Sold direct to you on strong guarantee backed by 30 days' trial. Ten men wanted in every county right now to accept our special offer, which will help you secure a machine at little or no cost. Write us today for catalog and particulars of offer.

THE
EXPO

WATCH CAMERA

The most wonderful and ingenious Camera made

It is but little larger than a watch, which it closely resembles. You can carry the Expo about in your pocket and take pictures without any one being the wiser.

One Cent a Picture

The Expo loads in daylight with 10 or 25 Exposure film, costing 15c and 25c respectively, and then the picture taking part of a whole day's outing may be had for a very nominal sum — the exact picture.

Easy to Manipulate

It is simplicity itself to operate. Takes pictures through the stem, where the Rapid Fire Lens is located. The photos (2 1/2 x 7/8) may be enlarged in any size.

QUICK AS A FLASH

Time and instantaneous shutter; weighs but 3 ounces; nickel plated. Endorsed by amateurs and professionals the world over. Thoroughly practical—printing and developing of film just the same as ordinary camera. In daily use by the police, newspaper reporters, detectives, and the general public. Important heads have been secured with the Watch Camera by enterprising reporters. Produces clear, sharp negatives indoors or outdoors equal to any camera on the market, size or price notwithstanding. Sold Under a Positive Guarantee.

Expo Watch Camera \$2.50 10 Exposures 15c, 25 Exposures, 25c postage 10c. Leather Pocket Carrying Case, 35c

MAILED TO ANY ADDRESS IN THE WORLD

JOHNSON SMITH & CO., 7157 North Clark Street, CHICAGO

JAPANESE ROSE BUSHES

The Wonder of the World

Japanese Rose Bushes bloom all the year round. Just think of it. Six weeks after planting the seed, the plants will be in full bloom. It may not seem possible, but we positively guarantee it to be so. They will bloom every ten weeks, Summer or Winter, and when three years old the bush will be a mass of roses, bearing from five hundred to a thousand roses on each bush. The flowers are in three shades—white, pink, and crimson. The plants will do well both in and out doors. We guarantee at least three bushes to grow from each packet of seed. Price, 10c packet, 3 pkts. for 25c postpaid.

10
c.

Shoo Fly Plant

A very remarkable botanical curiosity you should have. Through quite ordinary flies will not remain in a room where it is grown. Bears very pretty flowers in summer and winter. Grows rapidly from seed.

SEEDS 15c, packet, 3 for 40c, postpaid.

Weather Plant

NATURE'S WEATHER PROPHECY By mysterious changes that take place, this remarkable plant accurately forecasts the weather many hours in advance. Will grow anywhere all the year around. An interesting house plant. Bears large, fragrant, pink, butterfly shaped flowers.

Seeds, 15c packet, 3 for 40c, postpaid.

GROUND ALMONDS

Amazingly Prolific—Easily Grown From Seed The Ground Almond has a flavor that is MOST EXCELLENT, resembling the almond. The nut is snow white, covered with a shell or skin of brown color. It grows close to the surface and anything from 200 to 300 Almonds may be expected from a single nut. There is no trouble whatever in growing any where and in any kind of soil. May be planted any time, and in eight or ten weeks from time of planting you will have an ENORMOUS CROP of the MOST DELICIOUS ALMONDS YOU EVER TASTED. Seeds 15c Pkt.

Perfume Plant

Blooms only at night, carrying forth the most delightful scented fragrance for quite a distance. Grows in house or garden.

much comment. For Also valuable because of new perfume made from it. SEEDS, 10c pkt., 3 for 25c.

Musk Plant

Another charming floral novelty of the sweet scented variety. Equally suitable as house plant or garden. Makes the most delightful perfume. SEEDS, 10c pkt., 3 for 25c.

The Wonderful Sensitive Plant

The Marvel of the Philippine Islands. Almost human in its nervous sensitiveness. Leaves curl, and fronds droop when touched. Apparently resents interference. It dislikes strong odors, and is painfully affected by artificial heat and electricity. Blue-green foliage and dainty pink flowers. It is a handsome shrub for house or garden and very curious and interesting bloom all the year round.

SEEDS 15c pkt., 3 pkts. for 40c postpaid

NITTO'S PLANT & FLOWER FOOD

NITTO'S PLANT FOOD is clean, odorless, and highly concentrated. It is used in liquid form in all kinds of plants, shrubs, roses, ferns, bulbs, berries, etc. It is a most valuable and reliable food. It changes ill-treated plants into LUXURANT BEAUTIES, producing masses of flowers that will equal any. Causes plants to bloom early and ahead of others. Your friends will marvel at your success. Makes all difference how healthy or how drooping your plants may be. Nitto's Plant Food will turn out New foliage and flowers and cause a marvelous transformation. 15c, 3 for 40c

Without cost or obligation on my part, send me a Ray Subtracto-Adder for 20 days' free trial.

No Money In Advance

This Marvelous Camera on FREE TRIAL!

Only 10,000 of these marvelous, instantaneous picture-taking and making cameras to be sent out absolutely on approval without a penny in advance just to prove that it is the most wonderful invention—the camera sensation of the age. Be sure you send for it quick! Fear thick of it—the new Mardel-ette takes and makes finished pictures

INSTANTLY!

You press the button, drop card in developer and in one minute take out a perfect, finished post card photo, 2 1/2 x 3 1/2 inches in size. Camera, itself, is about 4 1/2 x 3 1/2 inches. Loads in daylight 16 to 20 post cards at one time. No film—no plates—no dark room. Not a bit of the fuss and bother of the ordinary break or camera. It is instantaneous photography. Universal focus lens produces sharp pictures at all distances. Pictures develop and print automatically. Can't overdevelop; results simply amazing.

WE TRUST YOU

No difference who you are, where you live or what your age, we will send you the complete "Mardel-ette" outfit absolutely on approval and give you 10 days to test it. If not satisfactory return it. But when you see what elegant pictures it takes—so quick, so easy, with no trouble at all—if you wish to keep it you simply send us \$1.00 per month until our special price of only \$5.00 is paid. Easy Payments—No Refund. No red tape of any kind. Nothing expensive or need you'll not notice them. Lots of fun and big profit. No Experience Required. Plain instructions and everything complete with outfit so you can begin taking pictures the moment it arrives. We guarantee that even a child can operate it. Just coupon rush now. No risk or obligation to keep camera.

The Chicago Ferrotype Co., Box 346, Ferryville Bldg., Chicago, Ill.
Send me at once one complete model Mardel-ette camera outfit, including sample of post cards and instructions. I agree to examine and test it thoroughly and if satisfied keep it and pay you \$1 a month until your special price of \$5 is paid. Otherwise I will return it at the end of 10 days.

Oxy-Acetylene Welding and Cutting

In the manufacture of finished pressure parts and tanks, welding plays an important part. Operator is shown welding a part to base, strength and neatness are essential.

Better, Stronger Metal Products at Lower Cost

In the manufacture of nearly every metal product, large or small, welding has great possibilities for making it simpler, stronger, neater, and at reduced cost.

Using oxy-acetylene welding as a routine process, progressive manufacturers everywhere are today speeding production, securing increased strength and decreased weight in vital parts, at the same time effecting large savings in manufacturing costs.

If you use bolts, rivets, or threaded joints in the construction of your product, investigation may show a real need for oxy-acetylene welding.

Prest-O-Lite PROCESS

Employs both gases (acetylene and oxygen) in portable cylinders. Prest-O-Lite Dissolved Acetylene (ready-made carbide gas) is backed by Prest-O-Lite Service, which insures prompt exchange of full cylinders for empty ones. Provides dry, purified gas, insuring better welds, quicker work, and lower cost, and also avoids the large initial outlay and heavy depreciation incurred in making crude acetylene in a carbide generator.

Necessary equipment is not expensive. We furnish high-grade welding apparatus for \$75 (Canada \$100); acetylene service at additional cost. Adaptable for oxy-acetylene cutting by the addition of special cutting blow-pipe. Through instructions are furnished free to every user of Prest-O-Lite Dissolved Acetylene—any average workman who understands metals can learn the process quickly and easily.

Our welding literature contains valuable data and many helpful suggestions. Send for it today—it may point ways for you to increase savings and improve methods.

Real Opportunity for Enterprising Men

Many enterprising mechanics find the job welding business pays them good, substantial profits. If you want to build up a prosperous business of your own, investigate today.

WANTED

A Good Honest AGENT In Each County

\$1800 to \$5000 This Year

We want a thousand additional agents at once—local agents for townships and counties, and general agents or district managers. **Exclusive county agency free.** A proposition of unlimited possibilities—a cash opportunity. Wonderful new business. **No experience required.** No competition. No risk. Sample outfit furnished. Just follow easy instructions and work honestly—for yourself. All or spare time work. A profit for every hour. A customer at every home. A chance that guarantees you independence. Your opportunity. **Act today.** Send your application for free county agency.

Amazing New Home Invention

The Shafer Ventilated Chemical Indoor Closet

No plumbing—no waterworks—no cesspool. Banishes the outdoor closet. Revolutionizes living conditions in country and village homes. Solves the one humiliating and perplexing country home problem. An imperative necessity to health, comfort and convenience. Perfected for his own use after years of experimental work by a heating and ventilating engineer. **Tested in over 2000 homes for three years.** Now offered to the homes of the world at a nominal price. Gives positive, guaranteed satisfaction. Demanded everywhere. A sale at every home. Warranted for ten years. **Absolutely odorless, sanitary, germproof.**

30 DAYS' FREE TRIAL Endorsed by physicians, health authorities, schools and thousands of homes. Every day we receive letters such as the following: "I have observed many of them in highly successful operation. In my private practice I unhesitatingly and continually recommend them. I wish these closets were in every home."—Dr. Thomas H. Turner (Health Officer). "I recommend The Shafer Closet in every home as a necessity and as a duty to public health."—Dr. D. B. Henry. "It is a complete success—a splendid invention of great practical use."—O. M. Misener, (Supt. of Schools). "Every home that would put one in and use it for a week would never let it get out of the house."—Arthur B. Ransom, (Farmer).

\$112 Cash Profit in One Day

That's the record of one man (a plumber) in a single day. The same man has never sold less than five Closets for any half day's work. Every home a prospect. Every sale makes dollars—not pennies—of cash profit. Liberal commission to agents. Biggest money-making opportunity ever offered, because it is an invention that is positively needed in every home not supplied with waterworks and sewerage system. Listen: L. J. Dulle, Mo., (Insurance Agent) says: "This is an easy thing to sell. Everybody you go to and talk Closet to has another prospect for you." C. A. Carter, Ill., (former Grain Dealer) says: "I was out today two hours and sold three. Find enclosed check. Ship me twelve at once." W. H. Bartholomew, Wash., (Farmer) says: "Closets arrived yesterday. Sold one in 15 minutes." Seymour L. Vance, N. Y., (Carpenter) says: "I sold nine the first three hours." W. D. Belknap, Ohio (former Real Estate Agent) wired: "Sold ten Closets today—send twelve by express." Do you want more proof of success and profit? Send today for free illustrated book showing pictures of homes and rooms containing this wonderful device, complete description, color plates, letters of endorsement from health authorities, doctors, editors and scores of users with names and addresses. This book is free—send for it today—investigate.

HEALTH-BEAUTY-VIGOR

Health, Beauty and Vigor are the most desirable things to this big human family. Health brings Beauty and Vigor. Health puts the warm, rich color on the cheeks and the blood fairly tingles with vigor and vitality. Doctors have been recommending vibrators for years, but the price was too high. Nu-System Vibrator is patented. It is a brand new invention, a new principle of vibration that has been thoroughly tested, it has only one working part. We make but one design—of best materials, by best electricians, everything first grade. It is electrically operated without a motor, attaches to electric light fixture. Vibration works Nature's way by producing activity, not by dragging the body to heel it. Vibration is condensed exercise, it does in a few minutes daily what it takes hours of exercise to accomplish. Nu-System Vibrator can be used in home, office or factory.

\$15 Nu-System Electric Vibrator Introductory Price **\$9.85**

Nu-System Vibrator is a high grade instrument, it must be for we make but one model and make it the best. It has been used for a long time and is absolutely Guaranteed and is sold on a 30-day money-back Free Trial plan. It has been used in Beauty Parlors, Barber Shops, Hospitals, Sanitariums, Doctors' Offices and Residences, and we have never had one returned. What it has done for others, it will do for you. Any one can use it. It is lightweight and needs no oiling or care. Does not get garments soiled or oily. Nu-System Vibrators have been used successfully to treat the Blood, Nerves, Stomach, Bowels, Liver, Kidneys, Skin, Complexion, Lungs, Hair, Scaly, Neck, Cheeks, Chin, Shoulders, and for Headache, Backache, Tired, Aching Feet and Brain Fog. Nu-System Vibrators are preventative as well as a curative agency.

Absolutely Guaranteed

We guarantee Nu-System Vibrators for one year—it will last a life-time.

30-Day Money-Back Free Trial

If after 30 days' trial Nu-System Vibrator does not do as we claim, your money will be refunded.

A KEWPIE
KAMERA
TOOK THIS
PICTURE

—this is easy!

IT'S no trick at all to make pictures like this. Even if you have never had a camera in your hand you can make good photographs with a KEWPIE—the Little Fellows as well as the Big Fellows—boys and girls alike. Point the camera and touch a small lever. That's all! And presently you have a collection of photographs money couldn't buy for you—or from you either. We'll take all the chances of your doing it well and liking it. If you don't like it we'll take back the camera and return your money. This is our positive guarantee.

This KEWPIE is a dandy to start with. The small model takes a picture $2\frac{1}{2} \times 3\frac{1}{4}$ inches. It costs only \$1.45, and a roll of film costs 15 cents. That's only three cents a picture! Packed for shipment the outfit, camera and film complete, weighs 2 pounds. Just order KEWPIE Outfit No. 208PC592. Enclose \$1.45 for the camera and the film. Add a few cents extra for the postage (your postmaster will tell you how much) and we will ship at once. Full instructions go with each outfit.

If you want a larger size KEWPIE, order Outfit No. 208PC591. It's 4 $\frac{1}{2}$ with one roll of film. Shpg. wt., 2 $\frac{1}{2}$ pounds. Price, \$2.87

TWIN FIRE The Spark Plug You Need

Here's the only plug on the market that fires more than one distinct spark. It fires two series sparks—two sparks, each independent of the other but at same time. Double intense sparks on same current as ordinary plug consumes. Adds a world of "snap" to motor; quicker get-away and more downright pull. Reduces carbon also because each combustion is complete. Go to your dealer today and buy a set of Twin Fires. If he can't supply you send direct, enclosing \$1.00 each—your \$1.00 is the best plug you've ever paid. Give store required.

Other plugs are dead when one point is clogged.

Twin Fire always fires. If one point clogs the other continues to fire, cleaning the fouled point.

**Twin Fire Spark
Plug Co.**

650 Woodward Ave.
DETROIT, MICH.

Dealers—There's an enormous demand for Twin Fire Spark Plugs. Easy to sell. Send for particulars.

THE KUEMPEL COMPANY, Design Dept. 14, DUBUQUE, IOWA

THE FINAL BLOW

to Faulty, Dangerous Vulcanizing Methods—

"IT'S-IT" VULCANIZER

Is the one wonderful invention—the one remarkable mechanical achievement that has snuffed out the entire horde of vulcanizing evils. It had to come. Motorists were dissatisfied with unreliable devices—afraid, and justly so, of open flame contraptions. Time revealed their imperfections—burst tubes and a trail of costly confagurations branded them not only inefficient but positively hazardous. "IT'S-IT" is operated electrically—no gasoline—no combustibles of any sort. You couldn't "set a fire" with the "IT'S-IT" if you wanted to. Accurate in operation. Complete process of vulcanization in 10 minutes' time—in highest wind or lowest temperature. No flame—lickers. No heat variations. No guesswork. No under or over curing—no single tubes—no failures.

Costs Only \$1.50 Complete

No chemical pads to buy. No fuel. Connects with any light socket on car. Heat applied through metal disc that needs no replacing. Safe—dependable—economical—ready for instant service on the road—in the garage—everywhere. Convenient to every—in use. Saves tubes and repair expenses. Saves a hundred times its cost. Not an experiment, but a perfect product of proven value. Thousands in use. Supplied in 6 or 12 volts. 6 volt furnished standard. State voltage desired when ordering. Sold by leading dealers everywhere—under guarantee of money back if not satisfied after 30 days' trial. If your dealer won't supply you, write us.

Temco Comfort Coils for Fords

New—different—wonderful in action. Backs all shock absorbing devices off the boards. Strong statement, but true. The double helical steel springs do the business. They're longer—stronger—more flexible. Bumps and holes are eaten alive. The roughest road becomes almost a boulevard. One man writes: "They're life-savers on rough roads."

SAVE YOUR VITALITY Conserve your strength. Be kind to your back and nerves. Jolts and bumps produce fatigue, nervousness, weak spines, headache, trouble with vital organs, etc. Put on a set of comfort coils and avoid all this.

GET YOUR SET NOW Once on, you wouldn't take them off for love or money. Words cannot picture the ease and comfort they give. It's wonderful. Nothing like them anywhere. Temco Comfort Coils are supreme. Listen to this: "Have used six different shock absorbers in the past six years, but none satisfied except Temco. Comfort Coils is the right name."

30 DAY TRIAL But don't take our word. Send now for your set. Try them 30 days. Test as long as your Ford. Easy to attach. Any one can do it. No extra to buy. Write quick for full details, and astonishingly low price, prepaid.

DEALERS AND AGENTS GET BUSY.
THE TEMCO ELECTRIC COMPANY, 2101 Sugar St., Leipsic, Ohio

OWN A STORE LIKE THIS! YOU CAN!

POP CORN CRISPETTES

BUILT THIS BIG BUSINESS FOR ME

FREE SECRET FORMULA FOR MAKING CRISPETTES

Here's a chance for every ambitious man to get into a big money-making business for himself. Requires no experience and but little capital. Once I was just a struggling candy maker. The profits from Crispettes — the new delicious pop corn confection — built this big business for me. The very same proposition that made me should do the same for you. I'll furnish everything — **teach you free** — show you how to make Crispettes by my secret formula — show you how to succeed. You can build a business of your own as I did. Get a window — a small store — a cozy nook in a theatre lobby or similar location where the rent is low. Start the business. Keep all the profits.

Every Nickel You Take In Nets You Almost Four Cents Profit

The demand for Crispettes is enormous — everybody everywhere likes them. One sale means two, two means four and so it goes. **Think of the fortunes made in 5c places.** If a great business, I found it so. So should you. Come to Springfield and see all this for yourself. Drop in quietly. Ask anybody about Long, about my store. Ask them if what I say isn't the truth. See the Crispette Machine just like I'll furnish you. See Crispettes made. Make a batch yourself. It's so simple, easy. You'll see — know — learn all about this business. Up to a distance of 300 miles I'll pay your railroad fare if you decide to go into the business.

Send for My FREE Book

"Dollars and Sense in the Crispette Business." It tells the complete story — gives all information. It's mighty interesting reading. Tells what others have done and what you can do. Write for it today.

Prest-O-Lite

for
Motorcycles

Makes Night Riding Safe

Your safety in riding at night depends solely on the brilliancy and reliability of your lighting system. Prest-O-Lite furnishes ideal riding light and is always dependable. It enables you to ride safely on any road under all conditions — floods the road far ahead with a brilliant, steady, penetrating beam of light, unaffected by bumps and jolts.

Prest-O-Lite will never fail you in an emergency—is sturdy, efficient and trouble-proof. Needs no attention you yourself cannot easily give. With its many advantages Prest-O-Lite costs less to buy and less to use than any brilliant lighting system. That's why it is the first choice of experienced riders everywhere.

You can get it on any make machine you buy.

"White Pine in Home-Building" is beautifully illustrated and full of valuable information and suggestions on home-building. Send today for this booklet—free to all prospective home-builders.

"The Helen Speer Book of Children's White Pine Toys and Furniture"—a fascinating children's plan book, from which a child may build its own toys and toy furniture. Prepared by Helen Speer, the toy expert. If there are children in your home, sent free on request.

THREE of the essentials for success in building a home are—a practical plan, artistic design, and good workmanship. But without the fourth essential—proper selection of materials—the other three are of little avail.

Take the matter of lumber. All woods are not equally good for all uses. One is good for one purpose—another for another. Select woods for their proper uses, and you will have no disappointments.

WHITE PINE

Any architect, carpenter or lumber dealer will tell you that for the outer covering of a house—subjected to the rigorous onslaught of rain and snow, heat and cold, sun and wind—no other wood is so durable and holds its place so well, without warping, splitting, rotting or opening at the joints, as White Pine.

Reading Standard
Schiekel
Thor
Smith Motor Wheel

AN automobile wheel is always perpendicular to the road. But a motorcycle wheel tips as it turns a corner. This means that the traction surface of a motorcycle tire is wider in proportion. Therefore, to give the proper wear, the tread must be wide enough to allow for this extra traction surface. Also just as thick at the sides as in the center.

Firestone Motorcycle Tires meet every condition of motorcycle riding. They are built to stand up under the strains of all kinds of roads. They are built for the road grip and resilience that will give you the greatest safety and comfort. They are built to give "Most Miles per Dollar."

DISSTON

SAWS AND TOOLS

Ask Your Carpenter

He knows saws. Pride in work well-done, and success in his trade, demand that his tools do their part.

Ask the gray-haired carpenter whose Disston saws have built hundreds of homes. Ask the young workman whose Disston saws will build the homes of the future.

The carpenter knows that perfect temper and hang, teeth perfectly adapted to their work—all the qualities a saw should possess—are summed up in the word "Disston." He knows the economy of buying quality.

Why the Allies' "Great Drive" Was Delayed

Last Summer the whole world was asking: "When will the Great Drive of the Allies start?" Field Officers and public were equally uncertain. Troops were ready. Transportation, food, ambulances—everything was there, except Guns and Shells.

Shells were needed by the million; orders were placed everywhere, but production had hardly begun. Why? Because nothing can be made rapidly and accurately in large quantity without Gages. Before manufacturers could start their lathes they must have Gages, which require time and skill to make.

The Men Who Made the Gages Knew Why the Drive Was Delayed

Let American manufacturers apply the lesson that Limit Gages are absolutely necessary for rapid and accurate work. Gages will measure profits in the severe competition after the war.

Limit Gages are for internal and external screw threads, holes, round bars, and a multitude of special purposes.

For example, we show above a thread limit gage in use—gaging a screw. If the screw is too small it will pass both sets of points, as shown at the left. A screw too large will

fail to pass either set of points (center). If just right, it will pass the upper set and hang on the lower, the "touch" being governed entirely by the weight of the screw.

The two sets of points are sealed to a certain variation above and below the required diameter. This variation depends on the work, whatever the product, whether a single piece, such as an "S" wrench, or a complicated mechanism. Limit Gages are a prerequisite to accurate, economical production in quantity. Absolute accuracy is unattainable and unnecessary; a Limit Gage is made to check dimensions within the variation decided upon as permissible, and with it an inexperienced workman can gage thousands of parts in a day.

The parts that pass this inspection will be interchangeable, and will positively fit into the complete machine. Assembly is made easy and rapid. Moreover, since parts can be gaged so easily and cheaply, more frequent inspection is practicable, errors are quickly discovered and corrected, rejections are minimized. The result is a higher quality product at a lower cost, often with magical effect on profits.

For further information, write for General Catalog 32, or Bulletin, "How to Measure Screw Threads."

Nujol for Constipation

Your Vanity Doesn't Go Far Enough

VANITY which prides itself merely on a good complexion isn't enough. A thorough-going pride in a healthy body is much more worth while cultivating. You cannot have a good complexion or a healthy body if your system is continually clogged with waste matter.

Nujol, unlike physics or drugs, will effectively relieve constipation without in any way disturbing the normal bowel function. It prevents the intestinal contents from becoming hard, lubricates the intestinal tract, and so facilitates normal movements. Nujol does not gripe or upset the system. Being tasteless, it is not unpleasant to take.

The Standard Oil Company (New Jersey) has used its world-wide resources in producing Nujol and its reputation is behind the product.

Nujol is the only remedy for constipation we manufacture. The genuine sold only in pint bottles bearing Nujol trade-mark. All bottles filled at our Nujol plant, absolutely modern and sanitary.

\$45 Starts You in the Tire Repair Business

Here is your opportunity to get into this big paying, big profit business. A business of your own in which you can be your own boss—a business that runs hand in hand with the automobile business—that grows with it and is fast becoming the biggest paying proposition in the automobile field. You can start now on small capital—only \$45, and cash in this gigantic opportunity. The coupon below will bring you full details—full particulars. Mail it today.

Millions of Tires to Repair—Means \$3,000 a Year for You

It is estimated that more than 30,000,000 tires will be made this year. These, with all the old tires now in use, will need repairing—will demand the expert attention—the expert service that you can give as a Haywood Tire Repair Man. You can learn this business in a few days. You can open a shop and make money almost at once. Auto owners will come to you—tell their friends, and if you are a live-wire, your business will soon grow from a one-man shop to a big complete tire repair shop and accessory store.

Complete \$45

HAYWOOD'S Model D.B. VULCANIZING PLANTS

One Machine Will Start You Making Big Money

This machine at its unusual price is practically the last word in efficient, economical tire repairing. It is simple, compact, quick acting, and requires but little room. It will vulcanize and make tire repairs of almost any nature—will do practically everything in the tire repair business except retreading. Just a small investment—\$45—a trifling amount, places you on this road to prosperity—gives you the start in this wonderful business.

The Only Nationally Known Tire Repair Service

Through National advertising, Haywood Tire Repair Service is known to auto owners everywhere. When you open a Haywood Shop you have the advantage of an established business—a business of unlimited profits—a business you don't have to wait for—that comes to you with scarcely an effort. In this, most wonderful year of the automobile business, is the time for you to start. More tires are to be used than ever before. The cost of operating cars is steadily climbing. Punctures and blow-outs are still common, and every man now, regardless of wealth, knows that keeping his tires repaired, prompt attention to the little cuts and bruises of his tires, is true tire economy. Tires are the biggest item in the up-keep expense of an automobile. You know that.

ACT QUICK—MAIL COUPON / FREE BOOK COUPON

I have published a big interesting book—a book all about tires. Tells how they are made—how they are repaired by the Haywood method. Gives complete details of this wonder machine—this new model D.B. at its unusual price. Gives inside figures and profits of the tire repair business. Gives proof of success, letters from others who are now operating Haywood shops and making big money. What these men have done you can do. \$2,500 to \$4,000 a year is the ordinary income of live-wire tire repair men. Send no money. Just mail the coupon—a letter or postal will do.

Complete Protection

IVER JOHNSON Safety Automatic REVOLVER

Is your home protected?

THE whole truth of this preparedness idea has just hit me. For years I have carried insurance on my life, health and house. I have tucked away a comfortable nest egg in the bank. I thought this was *all* the protection that any father could throw around his family.

Defending the lives of my loved ones against the attacks of prowling burglars—this never occurred to me.

When I saw the loophole in my scheme of home defence I felt guilty. I hit the trail to the nearest hardware store and bought this trusty Iver Johnson Revolver you see lying here on the table.

* My *trusty, friendly* Iver Johnson.

I've never had to shoot at a man. I hope I never shall have to. I never think of my Iver Johnson as a brutal, terrible weapon. I look upon it as a *friend*. The very knowledge that I have it gives me a sense of *security*.

Have you thought of a revolver as a friend before? Will you give your family protec-

tion that is one jot short of *complete* protection?

When you buy a revolver buy a *good* one. The Iver Johnson is the safest small firearm made, because its patented *safety device* makes it absolutely harmless. Hammer model with regular grip, \$6.75; Hammerless model with regular grip, \$7.50.

Iver Johnson Bicycles can't be beat for speed, strength, easy riding and long wearing qualities. Racing, Cushion Frame, Truss Frame Roadsters and Mobicycle models. \$35 to \$55. Juveniles \$20 to \$25.

Iver Johnson Motorcycle is conceded by engineers to be the most scientifically designed and best built motorcycle ever produced.

Big Money-Maker for Live-Wire Dealers

Dearborn
Truck Unit

\$350

F.O.B. Chicago

CONVERT FORDS into
ONE-TON TRUCKS
the "DEARBORN WAY"

Ford-Dearborn One-Ton Truck
A Combination of a FORD Chassis and
a "DEARBORN" UNIT

90 Per Cent of
Load Carried
on Dearborn
Truck Unit

THE DEARBORN TRUCK UNIT for converting Ford Cars into one-ton trucks is proving a tremendous money-maker for dealers everywhere—because of its **SUPERIORITY** over other Units.

Business men and farmers can secure this sturdy one-ton truck with Ford *Efficiency*, Ford *Simplicity* and Ford *Economy* and Dearborn *STRENGTH* for less than one-half the cost of the average one-ton truck.

The Dearborn Truck Unit is attached to a Ford by any Auto Mechanic in a few hours, full instructions accompanying every Unit. The Dearborn frame is rigidly bolted and riveted to the Ford frame at front, sides and rear. The rear axle assembly on the Ford becomes a jackshaft, and is securely held in place by our specially designed hangers. The Ford wheels are removed and sprockets attached to the Ford hubs in their place. Our frame and various parts differ from other makes and are far superior in material and construction.

"Dearborn Units are *strong* where others are *weak*"

Important Features

Carrying Capacity—Guaranteed One Ton.
Frame—14 ft. long, 4-inch channel steel, braced with I-beam over rear axle, to which cross spring is bolted.
Rear Axle—2 3/4 x 1 1/2 inches, drop forged and heat-treated; 3000 lbs. capacity.

Bearings—Heavy Duty Rock Roller Bearings.
Springs—Heavy Truck, 2 x 44 in., 10 leaves, bronze bushings.
Wheels—Artillery, 32 x 3 1/2 in., twelve 2-in. spokes; guaranteed hickory.
Tires—Firestone, solid rubber, 32 x 3 1/2 in.

Drive—Double side chains, Halfwin roller chains and steel sprockets.
Gear Ratio—27 teeth on jackshaft sprocket and 54 on rear sprocket; about 7 1/2 to 1.
Loading Space—Full 9 feet back of cab.
Wheelbase—When attached to Ford chassis, 125 inches.
Tread—Standard, 50 inches.
Weight—Dearborn attachment, 1000 lbs.; attached to Ford chassis, complete, 1550 lbs.

Big Opportunity for Wide-Awake Dealers

The Dearborn Truck Unit is built in our own factory, under our own supervision by expert auto mechanics and is guaranteed for one year. It is the Biggest Seller in the truck field today. We want a dealer in every town, and offer a liberal exclusive agency proposition to the right man. Territory is being taken quick. Write at once for full particulars and territory desired.

How Radium is Used on Ingersoll Watches

TAKE an Ingersoll "Radiolite" watch home with you; and look at it *in the dark!*

The hands and figures of an Ingersoll "Radiolite" watch are *self-luminous*. "Self-luminous" means that the light comes from *within*. Merely phosphorescent substances borrow their luminosity from outside light; they will glow for two or three hours (at most) after exposure to light. But "Radiolite" is independent of outside light; it gets its illumination from an element *within* itself. That element is radium.

Every particle of radium like a little battery, sends out energy in every direction. This radium—in infinitesimal quantities—is imprisoned within crystals of zinc sulphide, a phosphorescent material. The action of the radium on the crystals is to cause them to vibrate and glow, much as the filament of an electric light glows from the action of electricity.

Ingersoll "Radiolite" watches fulfil the object sought in so many ways by makers of watches—to show time in the dark as well as in daylight. The hands and figures glow brilliantly, showing the time at a glance, even at a little distance, and retain their luminosity unimpaired for at least ten years.

How the "Radiolite" looks in the dark

In country or city, motoring or walking at night; boating or camping; in the darkened theatre; or in the bedroom at night, people find them wonderfully convenient. Traveling men, doctors, factory workers, sportsmen, soldiers, and others know the usefulness of the Ingersoll "Radiolite."

Nearly one-third of the Ingersoll watches now sold are "Radiolites." You can see them at the nearest dealer's, with the many plain dial Ingersolls as well. If he is out of the model you want, it can be had on receipt of price by any of the Ingersoll offices named below.

GOODRICH SILVERTOWN

Cord Tires

LOOK THEIR ARISTOCRACY

TIRE of royal pedigree is Silvertown.

Look down into it where its sinewy two-ply cable-cord structure is laid bare, and you will see why the Silvertown, marked with the Red Double Diamond, is a tire apart.

Inside and outside Silvertown looks its aristocratic lineage.

You see its aristocracy **INSIDE** in that exclusive cross-wrapped body, the patent-protected, rubber-saturated foundation of a tire, which conquers the great destroyer of tires—internal heat.

You see it **OUTSIDE** in the extra-size of the tire.

Out of its inimitable making come a gasoline-saving economy, a smoother-riding comfort, a greater-mileage, you can not afford to be without.

Save a Year or More

Experience demonstrates that trees planted in blasted ground grow faster—are healthier—and bear earlier than trees planted in spade dug holes. Prove this fact for yourself by using

Save Your Shade Trees

Life is difficult for city trees. Side walks and pavements limit moisture area and check their growth. Die-back destroys them. Prevent this destruction by blast-rejuvenation. If instructions are carefully followed this work can be safely done within a few yards of houses or water mains. Find out how now.

Red Cross Farm Powder

when planting trees. First year results will surprise you. First year losses average 3% compared with 33% of spade set trees. The reason is simple, logical and practical. Blasting shatters the heavy "hard-pan" under the top soil and provides for better rootage, increased nourishment and greater moisture control.

Don't Pot Your Trees

Give them a chance to grow and expand. Our big book tells how. It's a revelation in the use of Red Cross Farm Powder in orchard or farm. Write today for **Handbook of Explosives No. 248.**

—which proves that we know G. L. W. Spring Oilers prevent spring breakage, rust, squeaks and crystallization. They put new life into old springs. A complete set attached in two minutes and require about two minutes' attention once a month. Last a lifetime. The G. L. W. Automatic Spring Oiler consists of a high-grade felt pad with an oil reservoir, contained in a genuine rust-proof polished blue metal case. It is snapped over the main leaf of the spring and the pressure from the spring action causes the oil to be distributed between the leaves and throughout the springs—making your car easy-riding.

Made to Fit All Makes of Springs

Four to twelve oilers are required for different cars

—two for each half spring and one for each quarter spring. Price 20c each. If your Dealer cannot supply you write to us. When ordering be sure to give name and model of car.

Dealers: Here's the biggest profit winner you ever stocked. Over 494,000 sold first six months. Our present advertising campaign will sell 1,000,000 in the next six months. Our discounts are liberal. Get your share! Write for terms today.

If Your Bathroom is Modern so is Your Home

INSTALL YOUR OWN PLUMBING AT LOW COST

The modernized *Hardin-Lavin Easy Way* enables you to install your own bathroom. Our method is scientifically perfect, simple, and easy. Any handy man with a few ordinary tools can install a bathroom complete. All our fixtures are designed by experts with knowledge gathered from 40 years of experience in turning out new, modern, practical fixtures. They are made for the handy man, with easy installing features. Look into this now—get the facts before you buy.

Our Engineers Help You Plan and Install

Send a rough sketch of your bathroom or your plan for any plumbing or heating installation, and our staff of engineers will show you the easiest, cheapest way. They will draw up simple, easily understood installing plans, absolutely free. If necessary we will loan you the tools. You save the high cost of labor, unused materials, costly delays, and high prices. Any handy-man can do the work with the help of our engineers and save all plumbing bills. We make all shipments promptly. Superiority is built right into all our fixtures. Hygienic, artistic simplicity, and easy installation are characteristic of *Hardin-Lavin* products. Our money-back guarantee label is on every fixture. It protects you. When you buy direct from the producer you avoid delay, extra waste of material, and save a dealer's and middleman's profit. Investigate this newer, modern, quicker method of the *Hardin-Lavin Company*. It is the result of 40 years of constant service, endeavor, and experience.

Send for Valuable "HANDY-MAN" Book

FRIENDS, Mother Nature is a woman, so mere man might as well let her have the last word. Velvet is Nature's last word in tobacco. Let's put that in our pipes an' smoke it. *Velvet Joe.*

Nature has done her best in Velvet—

Only nature could have done so well.

If your taste is anything like that of most pipe smokers we know, you won't want a better tobacco than Velvet.

To get a better—someone must invent a better variety of pipe tobacco than Kentucky Burley. That hasn't been done. Someone must beat Nature at Nature's own method—mellowing this tobacco by two years' patient ageing in wooden hogsheads. That's not likely to happen.

Put Velvet to any test *you* think will prove its quality. And make the test *today*.
